>The ARRL took it upon itself to force 13wpm code (disguised as
>Farnsworth Code, not Morse Code) on unsuspecting newbies who don't know any
>better.

Most knowledgeable people believe that Farnsworth-sent code is easier to learn and copy than non-Farnsworth code. It may take a bit more time to learn to hear the letter rather than count dits, but this is, IMHO, more than offset by the fact that the applicant has more time in between characters to recognize the letter.

A second advantage is that it makes it easier for the student to continue on to higher code speed and develop proficiency.

I have lived to regret a few of mine. Someday I will understand the attitude, NOT. One of my friends, a Life Actuary now teaching applied Math at a good state engine school, wanted to outlaw kids going to school within 300 miles of their home. He got tired of what boiled down to enrolling at UW Stevens Point (not where he teaches but where he lived at the time) with the idea that 'yah I need to get a job but I won't let 'em change me, I'm already perfect'. We are seeing the same thing here.

Back in my coaching days I asked an old bridge partner who happened to be a shrink about 13 year old boys. His response was that with three exceptions they are adults (probably why churches bless the pubic hair) Experience, Identity Separate from the Herd, and the realization that long-term goals require short-term sacrifice, the ability to set priorities, plan, and execute it. Without the last they are crummy daddies and we sure as hell have enough of that, without the identity there is no value filter, and without the experience if one spends enough time ducking it there is no adulthood. Kind of a mind-bender at the time and since. He did a lot of work for the reformatory in Green Bay BTW.

It's called the Peter Pan Syndrome: I will never grow up.

>But I have been advised to practice head copy to increase my speed.
>Head copy requires recognizing words.

Yes, but in doing so, perhaps you can use the same mental techniquez that you use to recognize printed words that contain a typo. After all, you probably did not get thrown for a loop when you saw the typo in the above sentence.

Or, perhaps names. If a ham says "NAME GEORGI," especially if an overseas ham, the I at the end probably will not throw you.

What is probably happening is that when you copy a word with an unexpected character, your error-checking routines kick in. In reality, if the word is relatively unimportant, perhaps you can not care whether you made a mistake that does not influence your overall understanding of what was being sent. If you can copy NAME GEORGI okay, then your fear of having made an error is probably causing you to miss the next words.

It is only a QSO, so if you get the ham's name and call right, you can miss as much of the rest as happens, with no change to the Universe of any import. :-)

This is correct, for two reasons:

1) For me, code is simply a part of my received wisdom about amateur radio, from many years ago. So, I just wouldn't "feel right" unless I learned how to operate CW.

2) I've seen it in operation, close up, for some time, and have seen how efficient it is. A couple of times a year I head out to a semi-remote place for what is called a "star party." In fact, several hundred other amateur astronomers go to the same relatively remote place, all at once, and set up telescopes, swap stories, observe the sky, you name it. The idea of stetting up a station at such an event, and communicating back here to Columbia, on only a few watts, and maybe off a handfull of AA batteries, really and truly appeals to me!

Message-ID: <ua152i91d1gk85@corp.supernews.com>
Source record: 38382

Hello, all!

I did not get a direct reply to my question about what will happen on HF after code testing once-and-for-all goes away, probably within a couple of years. However, in another thread, KOHB stated that in his opinion the post-code-testing "flood" of new operators on HF would be only a "modest trickle," because "everyone who wants to be on HF is already there," or something to this effect. Is this view widely held?

That is, the general impression I have received, which could certainly be in error, is that code testing has created a great pent-up mass of VHF-only operators, and others, who are at the ready to instantly leap onto HF if only the "hazing ritual" be done away with.

But can it be true that there is NO "pent-up mass" out there, in actual fact, and that it's really and truly true that "everyone who wants to be on HF is already there" -- code test or no? I find this hard to believe, for a couple of reasons.

First, if the above is true then why all the angst about code and code testing? Did no one ever CHECK and see just how many folks really WERE being held back or kept out of amateur radio due to the testing for code? If KOHB is right, well, apparently no one ever did that, and the whole "pent-up mass" could in fact caucus inside a phone booth, relatively speaking!

This seems like a substandard way to make policy, at least to me. Where have I gone wrong?

Secondly, who in fact has been the driving force behind the whole NCI business if not those who either were themselves, or were speaking for, the presumed great mass which was being kept off HF, or out of amateur radio, by code testing? If that mass doesn't really exist then I have to confess my amazement. What's it all REALLY been about if "everyone who wants to be on HF is already there?

Imagine that after the Emancipation Proclamation, and the War of Northern Aggression, we had found that in truth and fact there simply WERE no slaves to free, and that the whole thing had been an, er, misunderstanding! Wouldn't THAT have been a deal, eh?

Is something like this actually happening, today, with respect to those people assumed to be held back by code and code testing? That is, at the end of the day, and after the Amateur Radio Civil War Over Code, the victims of same DON'T REALLY EXIST?!

Staggering, if true, in my view, that all the blood-letting has been for nought.

So, what HAS it all been about, if KOHB is right?

I'm just wondering, and really not to start the same old fight all over again...

When spark was on its way out, was there as much dissention in the literature of the day as there appears to be with CW today? Arguments that if the kids don't learn spark, they will never be "real" hams? That spark can be done with an automotive coil and a battery in an emergency, while other modes require circuitry? That spark needs to be a permanent part of the spectrum to preserve history?

Just some thoughts, mindya...

Jim

Val:

The "pent-up mass" of VHF-only operators have, for the most
part, already matriculated to HF by taking of the liberal grandfathering
provisions of Restructuring. Eliminating the "hazing ritual" for good
won't really have as great an impact, because there will still be the
necessity to take the written tests. That will continue to keep a lot
of people out of ham radio. Only a "license in the cereal box" type
of total giveaway would have any chance of creating a mass influx
of the type you're talking about, and even then, it is doubtful. Probably
one of the biggest surprises of Restructuring is the way we've seen it
as NOT being the answer to ham radio's growth woes. Let's face
it -- were competing against the Internet, cell phones, wireless
everything -- ham radio doesn't stand a chance. This hobby/service
is on it's way out, one way or the other.

Ed:
Ed:

I think it can be somewhat accurately predicted. Amateur Radio would
have continued to grow at a low but steady rate, and we would not have
the "balkanization" we have now if there were no possibility of reducing
or eliminating code testing standards. Sure, the whiners would still be
with us, but their whining wouldn't be getting them anywhere, unless and
until they stopped whining and applied the same energy to learning the
code.

> Those that are capable of achievement do so with our without "superior
>licensing standards." I would like to think that I am a good example of
>that.

>I was licensed at a time when the standards to obtain full amateur priveleges
>were a lot easier than they are now.

Perhaps, but at a later point on the timeline of ARS' history, more
comprehensive and challenging standards were adopted, and prospective
hams continued to achieve them with little or no problems.

>Most hams exceed the standards that they had to meet to be given a license.
>You have done that, too, Larry.

Maybe so, but once again, I have to make it clear that this debate is
not about me. I don't consider myself to have been anything particularly
special as a prospective ham, especially since it took almost fourteen
years for me to convince myself to glue my butt to the chair and make
a legitimate effort to learn the code.

>I do not see any problems in ham radio today that I attribute to the nature
>of the present ham tests.

Of course you don't Ed, because you make your living working for
an organization which MUST, by it's very design, have a positive outlook

with regard to the future of the ARS. The rest of us are free to see
the real world for what it is.

>Enforcement? Much of the conduct that gets Riley's
>attention is done by hams who have met the standards you say are superior.

I've always gone out of my way to make it clear that I acknowledge that very
same fact. And virtually 100% of the violations made by these Pre-
Restructuring Extra-class hams involve behavior witnessed while operating
on the HF phone bands. It has nothing to do with CW or code testing.
Microphones are what cause on-the-air chaos, and it is the desire to get
an HF microphone in one's hot little hand which is the primary motivation
behind the reduction/elimination of code testing. The cause/effect
relationship is crystal clear. Keep in mind, I'm not so much a CW-lover
as I am totally disenchanted with HF phone. I embrace all of the HF
non-voice modes, mainly because that's where the better operators
seem to be.

>Dumb questions? I sure had 'em, and some patient old timers answered them

> of the testing changes be other than, in the end, more hams,
> and by extension, more hams who know nothing about CW?
> This seems pre-ordained to me. Am I wrong?

I think it's too early to tell.

Consider the following:

1) The 2000 restructuring has only produced an increase of about 8000
hams in almost two years. Compare the total license and new license figures
for the period since April of 2000 and for an equal length of time before
April 2000. N0BK's "wet firecracker" description sums it up pretty well.

2) For many years the USE of CW/Morse has been mostly driven by forces other
than legal ones. Sure, it had to be learned for the test, but those who had
no interest in the mode had no requirement to actually use it - just as those
without technical interest have no requirement to build anything.

3) Band plans are a whole 'nother ball of wax that is in constant motion. Oddly enough many of the digital folks want to contain the expansion of the 'phone/image subbands on HF.

> Sure, the mode is "valuable" and sure it will remain "in use"
> for that reason. But once it loses its official support, and
> once it falls to a fringe within the fringe that is amateur
> radio, how long before the band plans change and it becomes
> a fugitive on the waves, which will start the ultimate slide?

That depends entirely on USE of the mode. Many of us who actually USE CW/Morse will continue to do so and encourage others to do the same.

> Hasn't all of this been in the works for about 30 years now?

More like 25.
>
> That is, from my reading and talking to other hams, it seems

> I see this month in big, glossy ads in QST? A lot of all-in-one
> rigs, as the flagships.

Sure. But some of them do a wonderful job, and those interested in CW/Morse have learned to find the rigs that are best for it. Or they build rigs, either from scratch or kits. In addition, used equipment is plentiful and often inexpensive for what you get. For example, a 15 year old Ten Tec Corsair II, loaded with filters, will do an excellent job on CW/Morse and costs less than most new bottom-of-the-line rigs.

> So, it's a bit, er, ah, of a dodge to

> and amps. There isn't likely to ever be big money in little
> tiny amps and antennas, I don't think.

Ham radio is not a big money item anyway.

Suppose there are 500,000 active US hams, and they each spend $1000/yr on new equipment. That's only a $500 million dollar market, total.
>

> un-coded hams, will lead, as sure as night follows day,
> to ever-increasing pressure on CW in the band plans?

Maybe. But there is also reverse pressure from digital folks.
And there may not be a flood of new hams - just look at what has
not happened since April 2000.

> For
> instance, what will NCI do when the code test goes way?

Its founder, Bruce Perens, has said that there will no longer be
any need for the organization to exist once its stated objective
has been achieved.

> I think I can guess, can't you? And who will resist this
> pressure, with any effectiveness? I don't see anyone.

NCI's executive director (WA6VSE) has stated here that he
personally OPPOSES expansion of the phone/image subbands.
>
> ** Sooner or later, won't CW be severely cut back, or

> yadda. . ." but that would hardly be either interesting
> or helpful. How about some intellectual activity!

What really matters is what happens on the amateur bands in question. If they are full of hams using CW/Morse, that will speak louder than any argument here. And if they are empty of CW/Morse but jammed with SSB, that will speak louder too.

So let me say this, Val - what do YOU want to happen? You can influence the future - just go for that General and/or Extra and USE your favorite mode(s) on the air.

Listen to, say, 40 or 20 meters CW during a contest like the CW SS, DX 'test or Field Day. All that activity is generated by a few thousand stations - probably more like a few hundred on any given band at any given time. The bands can be that busy all the time if we USE them.

Just out of curiosity, WHICH "Navy" were you a morseman in?

TTY and on-line encryption/decryption were already a part of
the United States Navy in 1940. Just how do you think the
"Red" and "Purple" Japanese intercepts were disseminated to
USN units in early 1941? Manual copy on a mill?!?!?

Note: The USN developed the poly-key "rotor" machine which
the US Army adopted in 1939. That code was NEVER
compromised through intercepts.

What do you think ex-CWO (USN) Walker was stealing full
information about in the seventies? Hint: On-line crypto
equipment that bypassed error-prone manual morse methods
in favor of getting it direct over any comm circuit.

For two decades the boomers of the USN have been cruising
around depending on non-morse methods of full alert and
launch orders. Are you going to propagandize morsemanship
in the USN and say they had sparkies in the radio rooms in
the 1980s?!?!?

"Let's Pretend" was a 1940s kiddies show on radio. If you want
to extend that to some fantasy fairyland sixty years later, be
my guest. Just don't try to command believeability on telling
fairy stories all about How It Was in the 1930s and then moving
it ahead by thirty to forty years.

This is the year 2002.

Absolutely! Damn kids of today anyway who didn't appreciate the
skill, perseverence, and absolute dedication of the old sparkies!

When vacuum tubes arrived it was just like being handed
everything! Might as well have non-spark licenses included
in oatmeal cannisters as give-aways! Dumbed-down testing
all about those unneeded "tubes" when it was all about
TELEGRAPHY and the skill of TUNING to head-copy noise!

Roll is a technical moron, is barely able to discern which end of
the soldering iron is the hot end. If he can "copy" random-
character code groups in morse "for practice," then he is hardly
an authoritative voice of what electronic hardware was available
a quarter century ago. Pfui.

Hint: "Amphenol" didn't make that little molded plug that fit a
7-pin miniature tube socket.

>I've seen them, used as internal connections in some older tube-era consumer
>electronics. I have the HQ hams scouring their junk boxes for Hans.

Phil might like one. Hans is too busy promoting Old Navy.

In my opinion, and make note that I speak for no one but myself, and in my experience, the people who whine the most about "no code" are the plug-n-play-CB-Radio crowd who got on VHF because the test was easy. Again, this is based on my experience. In my opinion, not only would HF all sounding like 14.313 or 3950, there would be a run on Linear Amps by people who have no idea of what they are doing or why and we'd end up with HF signals getting into everything from phones to toasters and the population in general hating Ham operators.

I am in agreement that the "loud cry" is from a very small group of people who don't want to jump through the necessary hoops to "earn" HF privelages. If they have "learning disabilities" give them wheelchairs with CB's on them but for gods sake don't let them on HF. The Code test is more than just memorizing the code. There is a state of mind that comes with code that the "no coders" are dismissing and failing to understand. Why don't we just get rid of that darn bothersome "driving" part of the drivers license and just take the written test? While we're at it, lets not make those surgeons do internships at hospitals and let them just get on with it after the written test.

I don't think the Pro-Coders are asking for anything unreasonable. Its not "hazing", its not punishment, and so what if everyone and their brother has a cell phone and code MAY NOT be relevant in the next nuclear holocaust? Its a necessary part of the progression from plug-n-play-CB-er to bonafide Radio Opeator who understands what happens when you push the button in on the microphone.

While I don't think there is a large mass of "no-coders" waiting for Lincoln to free them from the slavery of VHF, I do think that every idiot that has $2,000 will go out and buy an HF rig and turn HF into shit over a 2-year period of time after the code is dropped. I don't care what the figures say, (figures never lie but liars figure) the percentage of the population that is attracted to Ham radio is never going to be as much as the no-coders claim. We're an unusual group of strange people that think RF is more fun than sitting in front of a tv or computer screen or any other interest.

Keep the code or every moron from here to eternity is going to be on HF. If you think its bad now, you ain't heard nothing yet!

Ever try building a coherer??

There are better historians than me in the group but beyond a few ozone freaks I doubt if spark's passing was mourned all that much. It was not all that easy to do and believe it or not there were AM stations that were basically spark. The Ford coil transmitter from a cannibalized Model T (and their buzz box was a different caper than the Kettering ignition BTW) was largely mythology. And the rise of broadcast radio made it something of a dead duck long before it was outlawed.

And do not envision it as tube-type equipment sprung full blown. The state of the art for many years was raw unfiltered AC so it probably did not sound a whole lot different until electrolytics came out in cheap quantities. Even four mikes of paper, foil, and wax cap is a wonder to behold.

By and large the Amateur Service is not anti-technology although things usually have to get pretty cheap. The sideband wars were fought on the ham bands and better technology won. One offshoot of that is the use of LSB below 10 MHZ where the rest of the world is USB only; the wars were over before the standard was set and tradition lives on. And I would suspect that the rather disasterous experiences with Amateur repeaters on 15 kHz splits influenced a lot of commercial and government users at the time although 12.5 on UHF is no big deal today.

The major changes in the technology of Amateur Radio tend to be driven by the availability of high-grade Junque and they are not always smooth. The

whole hobby had to learn about linear amps in the 50s; some of the groupies recall getting enthused over 'grounded grid' linears with varying results. Build we must.

So I am not too sure the situations are comparable. You make a basic assumption that tradition reigns and tradition is the only reason for maintenance of a cw test. You are simply wrong on both counts.

N2EY wrote, after I stated that the ultimate result of all the recent testing changes has to be MORE hams, and by extension, more hams who don't care about CW:

>I think it's too early to tell.
>
>Consider the following:
>
>1) The 2000 restructuring has only produced an increase
>of about 8000 hams in almost two years. Compare the total
>license and new license figures for the period since April of
>2000 and for an equal length of time before pril 2000. N0BK's
>"wet firecracker" description sums it up pretty well.

Hm. So, would it be correct to say that the creation of the current Technician license DID have an effect, and DID bring more people into the fold, in a burst that started ten or so years ago. Then, as the 1990s went on, some of those folks DID qualify with code at the first level, and it was these same folks, and mostly them alone, who came onto HF in a big way HF after April, 2000, restructuring. That is, there was no real influx of NEW people onto the HF bands, OR into amateur radio, when the code requirement was dropped to 5 wpm for ALL license classes. Would that be right?

>2) For many years the USE of CW/Morse has been mostly driven
>by forces other than legal ones. Sure, it had to be learned for the
>test, but those who had no interest in the mode had no requirement
>to actually use it - just as those without technical interest have no
>requirement to build anything.

Well, right, in that there never has been a legal REQUIREMENT to USE CW on the air, am I right? However, was it not a fact that if one took the trouble to learn code at 13 wpm, or some higher level, then it occurred to at least SOME people that it sure would be silly NOT to use it, since it worked so well for some things? Would that be a fair statement? That is, THIS is the argument I think I am seeing from some code supporters. Does this idea hold any water?

>3) Band plans are a whole 'nother ball of wax that is in constant
>motion. Oddly enough many of the digital folks want to contain
>the expansion of the phone/image subbands on HF.

That would be "odd" only if they were the same ones wanting to put an end to code testing, and by extension erode the long-run numbers of people with an interest in CW. Would THAT be a fair statement? Is everyone going to just be friends now?

[As for the future of the band plans and CW]:

>That depends entirely on USE of the mode. Many of us who
>actually USE CW/Morse will continue to do so and encourage
>others to do the same.

Yes. And if CW has allies in the digital ranks, well, that will
bode well for the future of CW in the band plans, at least for
a good while, say 10 to 20 years. Would that be fair?

[snip items about commercial interest in CW, which has
been small for quite some time, though some transceivers
do accomodate the mode.]

>Ham radio is not a big money item anyway.
>
>Suppose there are 500,000 active US hams, and they each
>spend $1000/yr on new equipment. That's only a $500 million
>dollar market, total.

That's a fair-sized market, I think! That's half a billion dollars!
And looking at QST and its advertising, the ratio between HF
and VHF related ads is at least FOUR-TO-ONE, in full-page
ads, and higher than that in smaller ones. That is, if there IS
any real money in amateur radio, it does seem to be in HF.
Is that a fair statement?

[In response to my comment that the new testing procedures
must inevitably lead to more hams and more non-CW hams]:

>Maybe. But there is also reverse pressure from digital folks.
>And there may not be a flood of new hams - just look at what
>has not happened since April 2000.

That is VERY interesting, and well could explain the rush to
now do away completely with code testing, in hopes of finally
having the desired effect. And if this does not work, will
elimination of the written exams follow?

[About NCI and band plans]:

>Its founder, Bruce Perens, has said that there will no longer be
>any need for the organization to exist once its stated objective
>has been achieved.

>NCI's executive director (WA6VSE) has stated here that he
>personally OPPOSES expansion of the phone/image subbands.

So, everyone WILL just be friends now, and NCI will go away?

[Finally, about the future of CW]:

>What really matters is what happens on the amateur bands in
>question. If they are full of hams using CW/Morse, that will speak
>louder than any argument here. And if they are empty of CW/Morse
>but jammed with SSB, that will speak louder too.

>
>So let me say this, Val - what do YOU want to happen? You can
>influence the future - just go for that General and/or Extra and USE
>your favorite mode(s) on the air.

I intend to do this, and to promote CW within the local club here.
However, I would like to know the speed of the current I will be
rowing against!

>Listen to, say, 40 or 20 meters CW during a contest like the CW SS,
>DX test or Field Day. All that activity is generated by a few thousand
>stations - probably more like a few hundred on any given band at any
>given time. The bands can be that busy all the time if we USE them.

This brings to mind a whole bunch of other interesting questions,
which I will bring up later in other threads. Thank you very much
for your reply here. It has been a very big help!

This refarming and bandplan thing has two other things worth considering:

1) U.S. Phone bands have been restricted forever to give the rest of the world a place to hide. Whether this is a consideration to the FCC today is an open question but it is the tradition.

2) You might find the SSB vs AM wars back in the 50s and 60s instructive. Both modes were legal in the phone bands. The sidebanders went to the high side (also very traditional) the big AMers went low and the middle was a war zone. SSTV has had a similar history as has RTTY and digital modes. Proves only that we can handle conflict more or less and that ultimately mode wars are settled by use and effectiveness far more than regulatory fiat.

So asking a fiat for digital modes is kind of non-traditional but possibly worth it to either get it going or laugh it out of existence real quick.

> of mind that comes with code that the "no coders" are dismissing and
> failing to understand.

Sounds like the religious ham version of "Once Morsed, Always Morsed".
Where in Part 97 is that "state of mind" described? Does the "state
of mind that comes with code" ensure that SK hams go to ham heaven?

> I don't
> care what the figures say, (figures never lie but liars figure) the
> percentage of the population that is attracted to Ham radio is never

Huh????? It's the PCTA folk who are afraid that HF will be overrun by
masses of unwashed CBers.

> Keep the code or every moron from here to eternity is going to be on
> HF. If you think its bad now, you ain't heard nothing yet!

When I got on HF in 1951, most of the AMers were predicting that
SSB would be the ruin of ham radio. "If you think QRM is bad now,
just wait until the band is covered with Single Sidewinders." I
assume you would have been one of those hams?

Russell Todd wrote, in response to my message about
CW testing and what is going to happen on HF after it is
eliminated:

>In my opinion, and make note that I speak for no one but
>myself, and in my experience, the people who whine the
>most about "no code" are the plug-n-play-CB-Radio crowd
>who got on VHF because the test was easy.

No doubt these people exist. However, the venom that this
debate has generated points to something deeper, something
involving people who have made it to the top, or nearly to the
top, of the heap. And then we have the people who think that
just because they're hot stuff in some other radio life they
should automatically be hot stuff in amateur radio lfe. But not
too many of THOSE folks are INSIDE the tent. . . are they?

>In my opinion, not only would HF all sounding like 14.313 or
>3950, there would be a run on Linear Amps by people who
>have no idea of what they are doing or why and we'd end up
>with HF signals getting into everything from phones to
>toasters and the population in general hating Ham operators.

Ouch! But that WOULD sell a LOT of amps, right? That would
be good, wouldn't it? Just kidding.

>I am in agreement that the "loud cry" is from a very small group
>of people who don't want to jump through the necessary hoops
>to "earn" HF privelages.

This has occurred to me, too. But maybe those folks have SOME
HF privileges, but not ALL of those privileges. Maybe, some people
just couldn't stand it that there was ANYone "above" them, especially
due to something as "sillly" as a 20 wpm, or 13 wpm, code test.

>If they have "learning disabilities" give them wheelchairs with CB's
>on them but for gods sake don't let them on HF.

That must have been AWFUL, the abuses there.

>The Code test is more than just memorizing the code. There is
>a state of mind that comes with code that the "no coders" are

>button in on the microphone.

You see, this is what I have always thought, too! But even in
Europe they're abandoning it!

>While I don't think there is a large mass of "no-coders" waiting
>for Lincoln to free them from the slavery of VHF, I do think that
>every idiot that has $2,000 will go out and buy an HF rig and
>turn HF into shit over a 2-year period of time after the code is
>dropped.

I wonder about this. From what others have said there just ain't
that great mass of folks out there chomping to get on HF and
duke it out with the current denizens there. I guess we'll see, and
pretty soon, too! And, in spite of current opinion, if the demons
are in fact unleashed, who will put them back into their place?
I wonder about THAT, too!

>I don't care what the figures say, (figures never lie but liars
>figure) the percentage of the population that is attracted to
>Ham radio is never going to be as much as the no-coders
>claim. We're an unusual group of strange people that think
>RF is more fun than sitting in front of a tv or computer screen
>or any other interest.

This is true, and helps support the idea that there will NOT be
a flood of new people onto HF. Could it be that anyone
with enough of an interest to spend the money on HF, which
ain't cheap, one way or another, doesn't actually view, and didn't
actually view, or wouldn't actually view, code as that much of
a problem, if it were/had been retained in a reasonable way?
Could it be that the long-run baby HAS been thrown out with
the short-run bath water?

>Keep the code or every moron from here to eternity is going
>to be on HF. If you think its bad now, you ain't heard nothing
>yet!

Yeah, I was just over on the "DX" newsgroup and reading
about all the "lids" involved in that "Ducie" station business.
I can't wait to get involved in things like that . . . NOT!

Val

Or conversely, if amateur radio would be the same with or without
a code requirement, then a code requirement is unnecessary. In
other words, the cost of HF gear may be a greater barrier to
entry than the code requirement.

Phil,

AES is one source, but their online catalog is down for revamping:

http://www.tubesandmore.com

I have some in the inventory, but it will be the weekend before I can look to see if they are 9 pin or 7 pin. Have plenty of sockets if needed.

A request on the newsgroup

rec.radio.amateur.boatanchors

and/or the "glowbugs" reflector may turn something up.

Fabrication from a tube socket and epoxy is quite practical but time consuming.

What equipment needs such a plug?

Computers also have the capability of pulling together a complete picture
from a partial description, it is just best done differently. FEC
implmenented using convolutional coding takes the bit stream you want
to transmit and transforms it into different stream, with more bits
(i.e. it adds redundancy), where each bit in the resulting stream depends
on a number of bits of the original data (i.e. you can lose some bits from
the resulting stream without losing information about the original data).
The Viterbi decoder at the receiver then takes the possibly errored bits
that were received and classified as "I think it is a 1", "I think it is a 0"
or "I don't know" and guesses at the most probable state for the original
data based on whatever it managed to receive.

The fact that computers can be highly effective at recovering the
underlying bit stream from partial data coded in this way is why the
general design of coding schemes for a noisy, narrow-bandwidth channel
is:

- squeeze as many of the bits, and hence as much redundancy as possible
out of the digital representaiton of the source information, by
compression or other minimal coding. This gives you a bit stream which
represents whatever information you are trying to send with as few bits
as possible but which is fragile, in that if there is little redundancy
remaining then the loss of even a single bit can make a substantial amount
of information unrecoverable (it is this redundancy removal that gives
compressed digital voice its all-or-nothing property).

- Then add the redundancy, and the bits, back in the form of FEC that the
receiver can use effectively to guess at the underlying data based on
partial or errored reception of the transmitted bit stream.

Computers hence can also be very efficient at extracting intelligence
from crap, it is just that they're best off doing so with data coded for

computer consumption rather than people consumption and this makes drawing an apples-to-apples comparison of the effectiveness of each kind of decoder a bit difficult. Comparing each in their application "sweet spot", I think computers have a fundamental advantage over OOK CW due to their ability to make use of 100% duty cycle modulations which put minimal energy in the harmonic sidebands. This seems to apply further up the feeding chain as well, actually. I saw a Bell Labs press release recently crowing about how they managed to get 2.5 Tbps through a single 2,500 mile long fiber, and they apparently managed this by replacing the OOK CW modulation traditionally used for optics with some form of PSK.

Of course, no matter what the theoretical advantages and disadvantages, the devil is in all the implementation details and some humans represent a pretty good implementation of the problem of digging intelligence out of crap SSB and CW/Morse signals, so it wouldn't surprise me if people sometimes still do better than a PC soundcard software implementations of even theoretically good digital modes. As for CW/Morse-decoding software, however, I'll bet the best implementations aren't the ones hams can buy, but rather are possessed by certain 3-letter-acronym government agencies who aren't likely to publish their results.

Here is where I have an issue. We have many modes that are not tested
for, yet they thrive, or at least have enough people using them that you
can try them out, and find someone to communicate with. I've been having
fun with many different modes since getting my ticket.

Yet here we have a mode which many of it's supporters believe will
disappear or die out if prospective hams do not learn the mode as a part
of the licensing requirement.

If this were truly the case, it isn't a mode worth keeping.

Not that I personally believe that, but that is surely the impression I
get from reading these threads.

Oh it did exist as a regular commercial item, which is why I used a
tube socket as the add-on accessory socket on an old radio that
I'm trying to resurrect.

A kind soul here found one in the "parts bin" and is shipping it off.

Someone in the "boatanchor" community suggested that I smash a
burnt-out matching tube and use the base as a plug. Besides
not having any tube equipment or spares in inventory any more,
did anyone ever try to solder to those miniature-base iron
pins?

With thanks to all who responded.

Unnecessary regulations are always a problem. Irrelevant Morse exams are worse, because 1) there are no other mode exams, and 2) they deny access to some people for no good reason.

So Larry, Dick, etc. just how do you explain the "international"
support for ending code testing? I have read ad nauseum how
this was all an FCC "done deal" regarding code testing in the US.
Is the direction we see towards ending code testing and/or
significantly reducing it an international "done deal"? If yes,
who drove the deal?

> >I do not see any problems in ham radio today that I attribute to the

Morse Code taught me nothing about amplifiers or toasters. What did it
teach you?
As a matter of fact, Morse Code isn't even defined in Part 97. Must not be
very important.

> I am in agreement that the "loud cry" is from a very small group of
> people who don't want to jump through the necessary hoops to "earn" HF
> privelages.

I'm sure you meant to say "unnecessary hoops."

If they have "learning disabilities" give them
> wheelchairs with CB's on them but for gods sake don't let them on HF.
> The Code test is more than just memorizing the code. There is a state
> of mind that comes with code that the "no coders" are dismissing and
> failing to understand.

Coders apparently also dismiss and fail to understand. A fair number of
people who jumped through the unnecessary government hoops want to see the
exam eliminated.

Part 97 does not define the "state of mind" that you seek from amateurs.
Please elaborate.

> Why don't we just get rid of that darn
> bothersome "driving" part of the drivers license and just take the
> written test? While we're at it, lets not make those surgeons do
> internships at hospitals and let them just get on with it after the
> written test.

Agreed, lets make the medical doctors take a Morse Code exam so that it will
qualify them to perform dentistry.

> I don't think the Pro-Coders are asking for anything unreasonable.

I think they are. They want the government to keep them supplied with folks to have a CW qso with, because they cannot sell it on its merits as other modes have to do.

> Its not "hazing", its not punishment, and so what if everyone and

Wowee!!! You mean like happened on 2M where the silence roars?

I don't
> care what the figures say, (figures never lie but liars figure) the
> percentage of the population that is attracted to Ham radio is never
> going to be as much as the no-coders claim.

What do they claim? How is it different from what the Coders have claimed? Please expand this idea.

We're an unusual group of
> strange people that think RF is more fun than sitting in front of a tv
> or computer screen or any other interest.

Not necessarily.

> Keep the code or every moron from here to eternity is going to be on
> HF. If you think its bad now, you ain't heard nothing yet!

Morse code failed the "riffraff" test. We need enforcement whether we have code exams or not.

Huh?

2495. Help, FM Transmitter for the house

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-27 02:51:44 UTC
From: Pat <unclepoo2@hotmail.com>
Message-ID: <4tao8.140124$q2.14165@sccrnsc01>
Source record: 38490

I am looking for a FM Transmitter for the house
I bought some time ago a Soundfeeder
It's horrible, It drifts only works on 1.5 volts, and barely puts out a signal
from recommendations of a Tech friend of mine, I made these modifications
1. Put on a 3.5 volt DC Power supply on it, and
2. put on a Standard size boombox whip antenna to replace the stub it comes with

These Modifications helped tremendously,
It made it so that the Soundfeeder, which previously barely put out a signal at all, can now be heard in my room
less than 30 feet away. However it can not be picked up all the way down the hall, and my brother would like to use it too

I want something that has the ability to broadcast over 30 feet in a shotgun style house
I don't wish to run anything illegal, or to cause any interference with anyone.
but I would appreciate any suggestions you have.
Preferably something not too expensive.

Val, I have one question for you: will you judge other hams based on their feelings about CW? If one simply said, "I don't think CW should be a part of the testing strategy for an amateur radio license" would you then pounce upon the person as though they had just committed sin? *That* is where the difference is between people, as you seem, of reasonable nature, and people like Dick/Larry, et al.

That's the biggest misperception the FCC allowed to happen via using CW as a measure for ham licensing: allowing it to be thought that priveleges had to be "earned." They do not. "Earning" privileges has nothing to do with the quality of ham radio or the operator.

[SNIP] of crap

>
> Keep the code or every moron from here to eternity is going to be on

And therein lies the problem with anything but written testing: it leads people to believe that it's OK to use CW as a filtering mechanism to "keep out" others.

CW testing is to ham radio as parallel parking is during a test for a driver's license. CW accomplishment proves nothing, nada, zip, zero for technical or operational skills and parallel parking proves nothing for measuring one's capability to be a safe or accomplished driver.

However, those who sound the horn of "let's keep 'em outta the hobby" probably also feel a lot safer with someone on the road moving at 60-70 mph right next to them...as long as they have passed their parallel parking test.

>
> The ARRL sent a letter to the FCC before the NOI/NPRM came out.

A "letter?" What about your ex-parte presentation?

The ARRL had already been told to submit a proposal. The ARRL then conducted an unbelieveably faulty poll (which Mike Deignan called "substantive"), with poor interpretation of the data (government by polls were all the rage in those days), resulting in a "Status Quo" position. The FCC finally had to make a move. The ARRL was then notified that the NPRM (not an NOI) was impending, and forced to make a breakneck speed "proposal." The FCC unsuccessfully tried to incorporate this proposal in the NPRM, which then made the released NPRM incoherent. The FCC then tried to revise the mess, creating even more headaches. I commented on a lack of vision and leadership at the ARRL for allowing such a horrendous poll to be taken in the first place, and allowing a faulty poll to make their decisions.

At the risk of sounding flippant: don't buy into the "demise of amateur radio" drumming that the ARRL does so well. It is the "threat" to amateur radio that is really the only way the ARRL knows how to "keep interest." Much like churches keep your interest and keep you coming by threatening the end of the world as though it will happen tomorrow. It's the only "business" they know.

The ARRL is a great organization that needs to learn how to pique the interest of folks to join by using other methodologies--not the same 'ol "threat-to-this-or-that" stuff that they've used for so long. While it's important business to keep abreast of issues that could threaten the hobby; I feel a lot of opportunities are missed due to this being the largest part of the ARRL's "business."

The future of amateur radio is in no worse shape now than it ever has been.

I'll let the government speak for itself. It says 5wpm Morse, not
Farnsworth code.

> In reality, that benefits the

I don't disagree with that, however, we need truth in government. Our
national amateur organization, who is so concerned with the preservation of
one mode above all others, should petition the FCC and change "Morse" to
Farnsworth, and specify 13wpm.

If that's the way we're going to do things, lets change the regs to agree
with it.

Larry merely want a welfare QSO because his favorite mode doesn't appear to
be capable of attracting new talent. Typical Liberal approach to life,
"Hey, lets get the government to force people to do what I want."

Ed:

Suit yourself, but I wish you'd at least explain to me what was untrue about my statement quoted above!

If I implied that your opinions regarding the future of the ARS wern't genuine and heart-felt, then I was obviously out of line. However, there is no denying that you are associated with the ARRL as a paid employee thereof -- and therefore, I think it unlikely that you would make statements in a public forum that would be contrary to your employer's interests -- or at least, it would seem to me that that would not be a very smart thing for you to do. You sure as heck aren't going to see me say anything that would cast public transit in a negative light. I know what side my bread is buttered on, and I know you do as well. And if you don't feel the need to provide adequate disclaimers on your opinions made in this newsgroup, then why would you object to someone pointing out some apparently obvious facts regarding your position?

You've got to keep one thing in mind here, Ed. From my earliest days as a radio amateur, my personal contacts with ARRL HQ officials have been tainted by what I have perceived as an indifferent, inhospitable, and sometimes callous attitude toward me as a rank-and-file member of the organization. This is nothing at all unique to my own personal experience; I've heard the same thing from hams I've discussed this with all over the country. So, if my own attitude toward ARRL HQ and it's personnel seems to be less than total enchantment, you'll just have to forgive me! This attitude of mine didn't form in a vacuum, it is the result of long, consistently negative personal experience. I go to Newington, expecting to be greeted with open arms like a true brother in the hobby of amateur radio, and am instead greeted with

the equivalent of "Who the hell do you think you are, what the hell are you doing here, and what the hell do you want?" -- and it goes downhill from there! All of this after uttering those truly objectionable words, "Hi, I'm Larry Roll, N3CRA -- and I came to see League HQ!"

So, go ahead and tune me out if that's what you want to do. Nothing I've ever said to you in this newsgroup was intended as anything other than an expression of reality as I see it. No personal disrespect was ever intended or implied. Quite the opposite; of all the ARRL HQ personnel I've personally met, I've found you to be refreshingly personable, friendly, and polite at all times. I disagree with you about the state of the ARS, particularly with respect to recent events in the licensing requirements, but I don't require you to agree with me in order for us to remain friends.

Lennie:

Don't look now, but I wasn't copying for the sake of *having* correct copy in-hand, although I was able to recognize the fact that I was copying correctly after a while. Of course, all I had were neat little 5-by-5 character groups on my paper, but so what? The fact that what I copied meant nothing to me didn't matter, I was just copying it for the sake of doing so, not to gather Intel. Having said that, I do believe that a couple of times I may have hit on the decoding key -- and I did "unscramble" a few "messages." However the decoded message was even more nonsensical to me than the scrambled character groups. If the message had been intended for me, I figure I would have understood it. Obviously, the crypto guys who devised that system knew their business.

BTW -- the messages I did "unscramble" were handed over to the XO of the base comm squadron. I never asked what they meant, and he never told me, but he did try to talk me into cross-training!

I used to use the random-character "spy" transmissions for both
"head" and "pencil" copying practice. It seemed to help me learn
not to anticipate what was going to be sent next, even though I
still have a problem with that when having 2X-CW QSO's. At least
I don't have a problem with basic character recognition, for which I
say the "spy" station practice was a big help. A lot of times, when
hams say they're having problems developing any useful copying
speed, they still don't have the entire alphabet/number/prosign sets
committed to completely reflexive recognition. And the only that
will come is through adequate, consistently applied practice.

Cecil:

I've been saying the same thing about myself. I've been sitting at a fairly stable plateau of 18 - 20 WPM pencil copy and 25 - 30 WPM "head" copy for virtually my entire ham career. I'd love to get up to a solid, dependable 40 - 50 WPM like the big-scoring CW contesters, but compared to them, I'm just a beginner, from a standpoint of raw numbers of hours spent operating. I say that when it comes to any physical skill, repetitive practice is the thing that brings out the raw talent! Unless, of course, these 40 WPM-plus guys are just some sort of CW-savants, which could be the case.

I would expect CW skill levels to fall under a bell curve and
it would appear that I will never be better than average.

Source record: 38525
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Well, it's a nice collection of reasonably exotic QSL cards. But
he could have done a better job of scanning them. Lots of
aliasing from the beat of halftone printed cards and scanner
resolution. What he needs to do is first set the scanner to
a higher resolution, 2nd do a 2 dimensional low pass filter,
and 3rd shrink the images to a size appropriate for the
amount of resolution the cards had originally.

The alias products in the images is eating up internet bandwidth
and is a reason for it being slow to load.

Ed.... you and everyone else here will never reach that full
potential.......

Why? There is just so much to learn and explore within radio, that one
person could spend an entire lifetime attempt to master every realistically
concievable aspect of amateur radio and radio communications in general and
still never reach 100%.

That is the beauty of it though.... never ending supply of knowledge and
experience. Only someone like the character Data on the ST:Tng series could
come close. This is why I love this hobby.... there is so much to do and
learn.

Well, that's only 180 out. There won't be any reason for most
newcomers *to* learn it. Just ask them.

Then there's the crack in Shannon for real world communications where the user has no control over the situation. Keep your scientific comparisons for the lab, they simply were of no use whatever in that situation.
In the channel in use at the time, the CW signal was readable where the PSK31 was not. That's the only valid comparison that can be made. Anything else falls under the Yogi Berra theorem.

Cecil, you should cede the point that he is saying that almost no one will learn it unless it is required. That doesn't change the fact that what he is saying will appear to new hams, who know nothing about the practical value of CW, as if CW has no value. Telling new hams that so few want to learn CW that it won't survive is so counterproductive towards having those hams learn CW that I can't believe he keeps repeating it.

I don't think he will ever understand what he is unintentionally doing. Or, he could understand and not be willing to admit that he is hurting his cause.

>

>Shouldn't it actually be easier for the CW Op, since it has is said to have
>an advantage over all other modes?

Sure, but I was hoping that by having Carl do the comparison himself, he would
have a better feel for CW useage on the bands.

I think it would be even more valid if a CW op counted CW QSOs and an SSB op
counted SSB QSOs in progress.

You game?

We should do it on an evening when there is no big DX pileup to tio the scales.

>> Why do you feel that SSB is a "wrong" mode?

>Because we're on r.r.a.p.

I find it hard to understand why someone would choose to have different views
based upon where he is. I may express them differently in different venues,
but I would like to think that my views remain unchanged from place to place.

The ones that are commercially available right now, perhaps, but that certainly could be improved.

I have been searching for the URL, but a few years back, there was a bit of a contest going on in the EME crowd where they were challenged to use a computer to decode an EME signal. I listened to the .wav file and could not hear the signal, and I am pretty good at knowing that a signal is present. (In the lab, I have used the signal generator keyed on and off and could tell a signal was present about 10-12 dB below the noise in 500 Hz.) Someone decoded it and won the 'test.

> not.

That's false, Dick. The computer was in the PSK31 channel and was NOT in
the CW channel. You know that and I know that you know that. Why you choose
to continue to spread your falsehoods when everyone can see exactly what
you are doing is beyond belief.

With the phasing out of the Morse code exams, Morse code has essentially let
him down so he unconsciously hates it? Some hams have said they would rather
see ham radio die than change radically.

> He asked for your help, and this is how you respond? For shame!

If I've been making mistakes for 51 years, I honestly don't know what they
are. My problem, as I experience it, is that I cannot buffer more than
three or four characters. After the fifth character in a word, I have
simply forgotten what character the word started with.

>operator, I can usually hold my own in purely practical matters of a
>technical nature.

More bullshit, total AMATEUR. All you are is an OPERATOR of ready-built equipment, a functional illiterate as far as anything that goes on behind the front panel.

The only thing "you can hold your own" is a CD version of the ARRL Handbook...it is lighter than the paper print version.

You are totally LOST on the theory presented within the covers.

>Well, as it happens, I did a lot of kitbuilding a quarter century ago,
>including a Heathkit color TV, an HW-101, HW-8 (2 ea.), Heathkit
>SW RX, Heathkit ï¿½-Matic keyer, and numerous non-kit homebrew projects.
>So, I've inhaled my share of rosin-core solder fumes [twitch].

Oh, my, you ASSEMBLED kits according to instructions that came with the kits! Oh, wow, that makes you a "building expert!"

I am so impressed. Not.

Oh, my, soldered a lot of joints did you? Or smoke more of them?

I knew about two dozen older ladies in Pasadena and nearby (at least two of them grandmothers) who soldered far more joints than you could have, to much greater quality, for spacecraft electronics. [Electro-Optical Systems, Pasadena, CA, a division of Xerox]

They didn't go into all this "let's pretend" crap about being "experts" in spacecraft or electronics. But you do in a radio hobby. Yeah, I do believe you've inhaled too much of something...

Now go off in a corner and copy some more of those "spy station" five-groups and pretend you're Bill Friedman. We can put the nearest mental ward on alert for you...

>Sorry Mr. Nonpar Ticipant, but you asked a question about
>Navy radio ops decoding Morse. I answered your question
>accurately.

Yeah..."accurately." Straight out of the Old Navy Hymn Book about on par with Gregorian Chants sung on dockside.

I can find the same answer in a public library...it's packed away on a dusty shelf along with other fantasy such as Nostradamus Predicts "Now You're Talking" content and the Hardy Boys Discover Secrets of Morse.

>Now you wish to divert attention from your
>question dumbass question with some reference to what
>you watched and didn't understand on the history channel.

Poor baby. Got your sleeve insignia all ruffled? Nobody saluted all your hash marks? Somebody say boo about BuShips' yellowed softbounds from 1943?

FWIW, I made part of my income on working on replacements for what was stolen off the USS Pueblo...only to have those stolen by an active-duty USN CWO surnamed Walker years later. No problem...those were replaced later, work supervised by NSA types who didn't wear bell-bottoms. Very little of that made "Discovery Channel documentaries" on TeeVee.

You hang in there with those Old Navy tales about sparkies Saving The Day With Morse back when steam finally huffed and puffed as much as the tale-tellers and spell singers do now.

>Good luck on this one now!

Not a problem. "We've only just begun to fight..." - J. Paul Jones or somebody after he saw the whites of somebody's eyes?

I think a sea-going CD would be nice playing in the background to the rhythmic beeping of salty morse. Some selections on the CD could be "Barnacle Bill The Sailor" to a full-on brassy band (with Annapolis Chorus) of "Anchors Away/Aweigh."

I get the impression that all this furor over Keep Morse Tests Forever
is solely to keep up the self-esteem (or steam) of those that
managed to do it. They NEED the personal perquisites to show how
BIG they are in radio, "expert" and all that puffery. Pfui.

It's an ARRL-sponsored maintenance of manufactured self-importance
for amateurs, government welfare program for the feel-goodies who
think they are warm merde in radio.

Nowhere, repeat NOWHERE in Parts 1, 2, or 97 of Title 47 CFR are there ANY specifications defining WORD RATE. None.

VEs could send characters at 20 or 30 "WPM" and say that is "15 WPM" and it could not be proven "illegal" unless the inter-symbol spacing was not according to the old CCITT spec on telegrams.

You can trot out the old "PARIS" arguments and say "everybody accepts that" but that has no real binding in the law. The resident legal beagle will bark about that, of course, and probably Bill everyone for it too. There is just NO definition for "word rate" with International Morse Code in Part 97.

that little imaginary story.

2570. ARRL's January Board Meeting -- A Brief Look

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-27 19:10:58 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <ua458pmp4u6n4f@corp.supernews.com>
Source record: 38550

Brief Discussion of ARRL January Board Meeting --

Each numbered item is a note that I took from my reading of the minutes as published in the March issue of QST. My follow-on comments are in reference to what is contained in the minutes themselves and reflect the fact that I am not a member of ARRL, yet, and so don't have all the history, though I do have some. Perhaps the folks here will fill me in to some extent. As soon as I get my call sign I'll be sending off my membership check to this organization. It's a MUST, as you will soon see!

1) The ARRL Foundation has assets totaling $2.15 million.
This is, no doubt, a good thing in that the interest income from this amount has to be in $100,000 to $200,000 range, depending on how it is handled. Mentioned also in the minutes is something called The Investment Policy Statement, probably outlining how the foundation's funds are placed. In other money matters, the year 2000 financial picture was said to be "as predicted." That is, an operating deficit, unspecified, was incurred. See below.

2) ARRL is working though a few years of deficit spending.
The unspecified deficit for year 2000 was the second one in a row (?) and deficits are predicted for the next few years. Revenue and expenditures are said to have been essentially flat over that time, implying that the deficits are not large. Also mentioned is the fact that the Board has been adding new programs and initiatives, with obvious effects on the budget, it would seem, unless new revenue has been coming on stream, which it likely hasn't!

3) The Big Project and the CC&R problem.
The "Big Project" apparently refers to part of ARRL's efforts to get the FCC to interpose for amateur radio operators where local covenants are concerned. To that end the "Big Project" calls for emphasizing the public service aspects of the avocation. "Clubs must take an active role in portraying themselves as civic organizations," it is said, in the interest of creating support for amateur radio with the public and in Congress, which will have to act decisively before the FCC will, at least in this area. A brand new Public Relations Book is about ready for distribution, dealing in part with the above, most likely.

4) ARRL involvement in Homeland Security.
The entire "emergency communication" function of amateur radio is under review due to the events of last September. Exactly what amateur radio's role will be under an unspecified new regime was not, ah, specified. However, since "emergency communications" IS the first-stated raison de etre for amateur radio and its use of the public airwaves, this review is very important.

5) This year is critical because of WRC 2003.
Big changes are coming and several ARRL sub-groups are working on many unspecified aspects of managing and/or implementing those changes. The end of treaty requirements for code testing is, without a doubt, near the top of the list here, as are what I assume are commercial interference problems in the 7 MHz area. And, of course, there must be others!

6) ARRL will put into place a new "development" program.
For those who don't know, "development" is a word for "fund raising!" The 1990s were most likely good to ARRL and its foundation portfolio. However, total value and interest income may have hit a plateau over the last few months and so new money is needed. See below.

7) New development programs will include "Major Gift" & "Planned Giving."
Every 502c program is in the same boat with money these days. All costs are going up without pause while income is stagnating. A doubling or tripling of the ARRL's endowment would not hurt a thing.

8) There is a need for expanded funding of the Education Project.
Here we see part of the bind it looks like ARRL is in right now. Revenue is flat yet significant problems exist, some of them requiring money if they are to be dealt with effectively. This project is important, as are others.

9) ARRL presentation on CC&R to Congress and FCC problems with 24 GHz.
Apparently competition has broken out at 24GHz and there is a chance that some amateur satellite communications may be interfered with as a result. ARRL believes that the FCC has overstepped its authority in allowing this. A group is to be established by ARRL to monitor the noise at or near this frequency, a function that will also cost additional money. In support of this, the group formerly-known as the Radio Frequency Interference Group will now be termed the Electromagnetic Compatibility Committee.

10) QST pages to be limited, Web Site improved, to cut costs.
Minutes of the Board meetings will be eliminated from the magazine and sent to the Web page. Also, ARRL section notes and contest results were nearly moved as well, all in the interest of cutting pages out of the magazine. What should be or could be "cut" from QST is obviously on the front burner. I wonder what the general feeling is about this in that while membership information seems very important to ME it was WAY down the list of respondents to a recent survey, I believe. Product reviews were Number One, naturally.

11) Space Station school contacts continue, 32 done so far.
This is a fine idea and fits right in with the "Civic Organization" aspect of amateur radio.

12) New Rules & Regs for ARRL Field Organization are adopted, unspecified.
I wonder what these are and if they are immediately important to members at large.

13) Presentation on "software defined radios" made.
This could be very interesting, especially with regard to remote control of a station using a "virtual radio." Sounds like fun!

14) The Club Competition Program needs a boost.
This program seems to be languishing. However, it got scant attention, or so it seems.

15) On 5000 novice band re-farming comments, a big majority was for more phone space.
Here we see a rather large straw in the wind. If it's all about usage then it looks to me like CW is going to getting into more and more trouble.

16) Distinctive garment for ARES volunteers tabled.
This seems like a good idea but it went nowhere, or so it seems.

17) VHF, UHF and microwave contesting need a boost.
This area of amateur radio seems to be languishing as well. However, there did not seem to be much available in the way of possible solutions.

The "40m problem" has been on the books since the WARC of
1979. That's a mere 23 years now. Eventually some action will
be taken.

>9) ARRL presentation on CC&R to Congress and FCC problems with 24 GHz.

"GigaHertz for gigasquirts" - KH2D :-)

>11) Space Station school contacts continue, 32 done so far.
> This is a fine idea and fits right in with the "Civic Organization" aspect
>of amateur radio.

There are approximately 85 thousand public schools in the USA.
So far those school contacts are 1:2656 relative to those schools
not so "privileged" in talking with real, live astrosomebodies.

>13) Presentation on "software defined radios" made.
> This could be very interesting, especially with regard to remote control of
>a station using a "virtual radio." Sounds like fun!

Software Defined Radio is NOT about software-controlled radios.

SDR refers to internal processing of mixing, modulation, and
demodulation done by microprocessor instructions.

>16) Distinctive garment for ARES volunteers tabled.
> This seems like a good idea but it went nowhere, or so it seems.

"Distinctive garment?!?" I just can't believe that. What, cute little
jumpsuits with all kinds of patches sewn on, sleeve insignia
denoting "rank" in the amateur service? :-) :-) :-)

>17) VHF, UHF and microwave contesting need a boost.
> This area of amateur radio seems to be languishing as well. However, there
>did not seem to be much available in the way of possible solutions.

Is that really necessary? Isn't "REAL" ham radio all about
CW on HF working DX?

I don't know about the other bands, but the 40m Novice CW frequencies
are relatively unused. I tended to reside there until I gave up from
lack of activity. At an average time on an average night, there are
1-2 CW QSOs in 50 kHz with lots of QRM from foreign AM stations. If
you don't already have HF listening capabilities, might be a good
time to acquire some and see for yourself.

On a happier note, my ClearSpeach speaker has the ability to allow
CW tones through while killing AM heterodynes.

Yep. we insisted that all hams at least know something about Morse code.
Now they aren't required to really know anything!

> terms?

It has application only in theory and design work, and is not in any
way useful in analyzing why to use one mode over another when the
equipment available cannot take advantage of the efficiencies noted by
Shannon. If the lesseer mode works under the instant circumstances using
the system that is availabe and the more efficient does not, only a fool
would attempt to force a comparison based on a Shannon analysis.
That is exactly what happened on the morning noted, where I could
easily copy the CW ID on the PSK31 stations but not the PSK31 signal
itself. None of this in any way changes anything Shannon said. It merely
points, again, to "In theory, theory and practice are the same, but in
practice they are often different".

Did you miss it? He got the help and rejected it. He obviously has been
doing it wrong for 51 years. He is supposed to be smart so how could he
fail to miss the fact that his method has not worked for so long? Shame
on you!

The number of US hams grew all throught the 1970s and 1980s, when all
US
ham licenses required a code test. The growth continued after the Tech
lost its code test in 1991. W1RFI posted numbers that show the growth
increased
after 1991, but has slowed somewhat in recent years. We cab play
number games all day, but doing so does not put even one more amateur
signal on the air.

Surges are to be expected - when the "price" of something drops, there
is
usually a surge of "sales".

> Then, as the
> 1990s went on, some of those folks DID qualify with code at the first

> license classes. Would that be right?

It sure seems that way. The main effect of the restructuring was lots
of upgrades, not lots of new hams. IMO the problem is NOT the tests -
it's lack
of publicity.

> >2) For many years the USE of CW/Morse has been mostly driven

> >requirement to build anything.
>
> Well, right, in that there never has been a legal REQUIREMENT to
> USE CW on the air, am I right?

Not since about 50 years ago.

There was once a requirement that hams certify
a certain amount of on-air USE of CW/Morse (so many hours in a certain
number of months preceding the renewal application) in order to renew
their licenses. This was changed about 50 years ago to a requirement
to operate using any mode,
then dropped entirely. For at least 35+ years there has been NO
requirement for
any ham to use any mode, or to operate at all.

Neither has there ever been a requirement to USE any of the theory
stuff, either.

The old Novice license went through a period (1967-1978?) when it
conveyed only CW/Morse privileges.

> However, was it not a fact that if one
> took the trouble to learn code at 13 wpm, or some higher level, then it
> occurred to at least SOME people that it sure would be silly NOT to
> use it, since it worked so well for some things? Would that be a fair
> statement?

Sure. Just like if you require all drivers to use a stick shift for
their
driving test, some will like it and buy stick shift cars instead of
automatics.

> That is, THIS is the argument I think I am seeing from some
> code supporters. Does this idea hold any water?

Of course. In fact, that's kind of what happened to me.

My first interest in ham radio came from hearing hams on 75 meter AM.
I wanted to join them, and set out to get a license. Along the way I
discovered that CW was fun once I had decent skills at it. Thus it
became my primary mode.

Would I have learned CW/Morse and used it without the license
requirement? I really don't know.

> >3) Band plans are a whole 'nother ball of wax that is in constant

>
> That would be "odd" only if they were the same ones wanting to

> put an end to code testing, and by extension erode the long-run
> numbers of people with an interest in CW. Would THAT be a fair
> statement?

All I can say is that at least some anticodetest folks are also
against
expanding the 'phone subbands because doing so will effectively reduce
the
spectrum available for DIGITAL modes.

Some observations:

Some folks say there should be no mode restrictions on amateur HF, and
that such restrictions constitute a form of "welfare" for "narrow"
modes, like CW.
But without mode restrictions, what is to prevent hams from using,
say, the same FM voice standards as on VHF/UHF?

On amateur VHF/UHF there are almost no mode restrictions. (Yes, I
recall 50.0-50.1 and 144.0-144.1). On 2 meters this has resulted in
most of the band being taken up by FM voice repeaters, leaving less
space for new modes to operate. Without any mode restrictions on HF,
it is reasonable to assume something similar would take place.

> Is everyone going to just be friends now?

All depends on how people behave. Look at how some people post here -
I see
a variety of behaviors, ranging from very friendly to very unfriendly.
>

I'm 47, so I expect it to be more like 40-50 years at least.>
>
> [snip items about commercial interest in CW, which has
> been small for quite some time, though some transceivers
> do accomodate the mode.]

I would say MOST HF/MF transceivers will do CW. It's just that
relatively few do it well. But good CW transceivers are not hard to
find if one knows what to look for.
>

>
> That's a fair-sized market, I think! That's half a billion dollars!

Compared to what? How much was the market for, say, FRS/GMRS radios
last year?
Or VCRs?

And I would say that my guess was about as high as it gets. I don't
think most US hams spend as much as $1000 total on equipment every
year.

> And looking at QST and its advertising, the ratio between HF
> and VHF related ads is at least FOUR-TO-ONE, in full-page
> ads, and higher than that in smaller ones. That is, if there IS
> any real money in amateur radio, it does seem to be in HF.
> Is that a fair statement?

Nope. Ads simply reflect what the manufacturers are trying to sell,
not what they are actually selling. I can name all sorts of examples
down through the years where highly advertised items did not sell in
large quantities, but rigs that were almost unadvertised sold like
hotcakes.

> [In response to my comment that the new testing procedures

> now do away completely with code testing, in hopes of finally
> having the desired effect.

Yup. And that effect will probably not happen. Sure, there will be a
short-term surge of new licenses, and a surge of upgrades - but only a
short-term surge. Just my opinion, but recent history has shown that
to be the case.

> And if this does not work, will
> elimination of the written exams follow?

Nope. But they may be reduced still further.

"Just do it" ;-)

Actually, let me offer you a suggestion and a challenge: Learn the
code, sending and receiving, and let us know your progress. Tell us
the methods you use and how long it takes you to go from "this is a
dit" to, say, 15-20 wpm. If you need any help, just holler. My email
address is for-real.

> However, I would like to know the speed of the current I will be
> rowing against!

Do not be misled by the naysayers and negativism sometimes seen here.
There are lots of nice folks on the air using CW/Morse. Join us!

(I prefer 40 meters, around 7030-7045 kHz).
>

>
> That's false, Dick. The computer was in the PSK31 channel and was NOT in
> the CW channel. You know that and I know that you know that.

That's incorrect and YOU know that. The computer was receiving the same IF bandwidth the receiver was using to play the CW. I know, the DSP in the sound card does its own thing and decides its own bandwidth. I can't help it if the CW doesn't need that added restriction on its use, thus is able to go ahead and work where the PSK cannot. That is exactly the point-efficiencies are not all theoretical. Many turn out to be operational-practical. Further, that has nothing to do with the situation at hand. The reason the PSK wouldn't print has been declared by many of the knowledgable to have been phase shifting due to a polar path, which I also am convinced to be true. What does the computer have to do with that?

Why you choose
> to continue to spread your falsehoods when everyone can see exactly what
> you are doing is beyond belief.

Just attempting to counter some of your erroneous BS, OM. You may be a real genuis, and a 51 year licensed ham, but there are holes in your knowledge a Mack truck could easily navigate through.

> The "Big Project" apparently refers to part of ARRL's efforts to get the
>FCC to interpose for amateur radio operators where local covenants are
>concerned.

Although that is important, the Big Project is an educational initiative. The premise is that Amateur Radio is a valuable classroom tool, not necessarily to recruit new hams, but because through amateur radio, we have learned some about science, geography, international politics, and amateur radio can be used as a teaching tool in the classroom.

The goal is not to teach kids about ham radio, but to use ham radio to support the learning that they are doing in the areas I mentioned. Will we get a few hams out of the deal? Quite likely. Will these kids be better educated ABOUT ham radio, so that twenty years from now, when they sit on that zoning board, they will be making informed decisions.

One message that the ARRL Board has heard loud and clear from hams is that we need to invest in Amateur Radio's future. The "Big Project" is one such investment. The neat part is that ARRL finally wised up. Although there has been a lot of "grass roots" support, they are also going after industry and other types of grants, through the other investment -- the ARRL Development Office. So companies like United Technologies might be willing to kick in a good chunk of change, because of the educational aspects of it all.

The defecit you mention includes things like the hiring of a Development Officer, Mary Hobart, KB1HYD, and staff to manage the Big Project. They also hired a full-time EMC engineer to help the Lab with RFI issues. His plate was instantly full on power-line noise cases. (I think we are actually making progress!)

For the big picture on the Big Project, see:

>1990s were most likely good to ARRL and its foundation portfolio. However,
>total value and interest income may have hit a plateau over the last few
>months and so new money is needed. See below.

It goes past that, although the stock market tumble hit ARRL's investment portfolio somewhat, I would imagine. There are two factors at play. First, spectrum pressure is increasing big time. I probably put about 100 staff hours personally into the ARRL's Comments, Reply Comments and Ex Parte filings wrt the RFID/70 cm threat. Maybe about half that on Ultrawideband, and new such threats to our use of spectrum surface more often than ever before. That says nothing about WRC-2003, where the least of our worries is what happens to code testing.

What used to be possible to fund solely from membership dues is not possible in today's regulatory environment. Part of that development is the creation of special funds to which one can contribute. Over the past couple of years, I have either kicked in my own $$$, or sold off the various junque "donated" to ARRL and kicked in OPM, to the Fund for the Defense of Amateur Spectrum, the Big Project and the ARRL Lab Test Equipment Fund.

>7) New development programs will include "Major Gift" & "Planned Giving."
> Every 502c program is in the same boat with money these days. All costs
>are going up without pause while income is stagnating. A doubling or
>tripling of the ARRL's endowment would not hurt a thing.

And the nice part about such fund raising is that the money is raised from people who voluntarily want to give it, targeted toward the part of ARRL's activities that is the most important to them. Those that cannot do so, or do not choose to offer any support over their membership dues, are still supporting the League and the things it does.

>8) There is a need for expanded funding of the Education Project.
> Here we see part of the bind it looks like ARRL is in right now. Revenue
>is flat yet significant problems exist, some of them requiring money if they
>are to be dealt with effectively. This project is important, as are others.

Yeah, but if ARRL could see 200,000 members instead of 165,000, that would make a BIG difference.

>9) ARRL presentation on CC&R to Congress and FCC problems with 24 GHz.
> Apparently competition has broken out at 24GHz and there is a chance that
>some amateur satellite communications may be interfered with as a result.
>ARRL believes that the FCC has overstepped its authority in allowing this.

There are more threats than just that. Right now, 2 m, 70 cm, 2.4 GHz, 5.6 GHz and 24 GHz are on the plate.

http://www.arrl.org/news/stories/2001/06/15/1/

>A group is to be established by ARRL to monitor the noise at or near this
>frequency, a function that will also cost additional money.

This is mostly being done by volunteers, and the actual costs of this program are, so far, relatively small. The intitial emphasis is on 2.4 GHz. Zack Lau in the ARRL Lab has built up noise sources and Paul Rinaldo and I have written a calibration procedure.

See http://www.arrl.org/news/stories/2001/08/09/1/

> In support of this, the group formerly-known as the Radio Frequency
Interference Group
>will now be termed the Electromagnetic Compatibility Committee.

The name change is a name change only. The EMC Committee works on various interference matters, ranging from representing Amateur Radio on various industry committees, maintaining contact with industry groups and companies and trying to mitigate interference before it happens. That is probably 25% of my job at ARRL HQ, the rest being related to spectrum protection and trying to supervise the Lab staff. :-)

>10) QST pages to be limited, Web Site improved, to cut costs.

>respondents to a recent survey, I believe. Product reviews were Number One,
>naturally.

Actually, Val, the ARRL has been doing a better job than ever before at telling members what is doing. The question is whether QST is the best vehicle to publish those very boring minutes, or whether they are better made available on the Web, freeing up page space for something else.

> Yep. we insisted that all hams at least know something about Morse code.
> Now they aren't required to really know anything!

What evolved was truly unfortunate. There was the Extra written exam and the Extra code exam. They were given equal weight, i.e. both were pass/fail and both had to be passed to obtain the Extra license. Thus, someone who hardly knew the bare essentials about radio and electronics could gain the highest level in ham radio while another who knew volumes about radio and electronics might not gain that highest level because of the 20wpm Morse code skill exam.

Thus a "King of the Hill" mentality evolved in ham radio where Morse code was given the importance of everything else in ham radio combined. Morse code had the almost supernatural power to elevate basically ignorant people to the highest level in ham radio above much more competent and knowledgeable hams. That religious-like structure was bad for ham radio, has backfired, and is in the process of being remedied. Hams who based their self esteem and importance primarily on Morse code are having their rugs pulled out from under them.

I'm not saying that all hams bought into the above scenario but enough did (and do) to cause the present mess in which we find our hobby. We can recognize those hams today as the ones who hang on to their fantasy by calling present day Extras, "dumbed-down". IMO, having different permanent class levels within ham radio is a bad idea.

Kind of a Catch 22 here, Cecil, because that problem usually disappears at higher speeds.

You don't seem to have that problem with words. I wonder how the word vs character buffering process is different.

How well do you buffer spoken letters?

Just reaching for whatever I can to help.

You were not using the same equipment for CW and PSK31 so your
observation is apples and oranges. In a similar case, 1000w
SSB will beat one watt CW. So what?

Then you won't mind if I use the right tool, my SCS PCT2e, to copy CW above 15wpm.

I've been tested by a professional, Dick. I cannot buffer more than three
or four characters. A clinical psychologist spelled words to me slowly.
After about the fourth character, I had forgotten what letter the word
started with. The doctor chalked it up to a relatively unimportant aural
processing handicap.

> IF bandwidth the receiver was using to play the CW.

The computer was used to process PSK31. The computer was NOT used
to process CW. You were used to process CW. You were NOT used to process
PSK21. THEREFORE, the same equipment was ***NOT*** used for both. It is
similar to comparing 1000w SSB to one watt CW. The comparison conditions
must be the same (or compensated for) or you are comparing apples and oranges.

That you could receive CW while the computer couldn't receive PSK31
is virtually irrelevant. I can run around my house and my computer
cannot do that. The computer is not equipped for running. I am. Your
computer was not equipped for CW. You were. Apples and oranges.

Words are immediately turned into concepts and processed on a different
level than letters. A word has an immediate conceptual meaning. Letters
have no meaning until the word is recognized.

> How well do you buffer spoken letters?

I was tested for such by a clinical psychologist. I simply cannot buffer
more than three or four aural characters. I've never been tested visually
letter by letter. Maybe I'll write a program to do that.

The Novice bands are a discouragement to amateur radio. The quicker Novices
and Plusses are folded in with the rest of amateur radio the better. At
least 15 years too late on this one.

Brian

The former military and commercial ditty-boppers who were paid to learn code
then come on here and proceed to tell the rest of us why its so great really
frost my ass. Its imperative that the government keep their welfare QSO
system going so that we can revere their greatness. Well, I'm not
impressed.

Why not? I've learned from the PCTA that it's OK to be a complete jerk at
anything other than making an RF emmision in the amateur bands, then its
back to the "Amateur's Code" where everything is sticky sweet. Personally,
I think they're probably jerks on the air, too. Imagine Larry having a QSO
with an OMIK member?

Show where. Part 97 still says "5wpm Morse."

I have a colleague who is a foreign national. His immigration attorney
billed him for his Christmas Card. And the guy is a Hindu.

There is just NO definition for "word rate" with
> International Morse Code in Part 97.

Yep. This is where I exited RRAP about a year ago. Did our comm attorney
friend ever come up with a copy of the CCITT spec?

Really? Ya think? I've never felt anywhere near "torn apart" by anything those oafs have had to say. And, I don't believe in the "brotherhood" of any organization. If one is a crappy person, they can't hide from it by joining a fraternity. Pecking order indeed...

Cec, in liberalism, its OK to lie as long as the desired religious outcome is achieved. Like in the Fish and Wildlife Service where 4 FEDERAL employees planted hairs from a captive rare Canadian Lynx and other hairs from a taxidermy display of same. As long as Public Land Use is limited in 15 western states, the lie is justified.

> 73,
> Ed Hare, W1RFI
>

Ed, I didn't want the observation to be taken as a challenge. I don't think the "threats" are really all that serious...at least not as serious as made out to be when one reads the "headline" of concern.

However, wrt to the 70cm band in particular (I can't speak for a lot of others--as I don't know anything about them), I know that in this area the 70cm band is little used...though there's been a little more activity lately due to IRLP.

I was just looking in the ARRL Operating Manual, Fourth Edition, dated 1991. Are there any vast differences in spectrum for amateur radio between then and now? If not, then how much of that may have been attributed, actually, to a response from the radio amateur community vs. direct action from the ARRL on behalf of the radio amateur community?

What I am saying is that "the sky is falling" gets to be old, boring, and rather like crying wolf all the time. I guess I take a more detached approach than maybe some hams. I wouldn't feel the least bit phased by the loss of 70cm--I don't use or listen to it enough to be attached to it and I do believe that we either "use it or lose it." The spectrum is extremely valuable to commercial interests and maybe that keeps me in a job, keeps me talking on my cell phone, keeps me in technologies I really enjoy playing with, etc.

Sorry to sound so callous about it, but to tell you the truth I think the ARRL makes a grave mistake by focusing so much on stuff like "the sky is falling." Where's membership figures? What's the financial status of the ARRL? Is the ARRL still as "influential" as it used to be with the FCC? Don't "we" use statistical data to ascertain that the approach has failed, the mission may need drastic changing, etc.? From a strictly business perspective (and that is the nature of my thought--not the emotionalism of the hobby), the ARRL needs to do something to fully engage the radio amateur community--and band threats don't fully engage the "new breed" of radio amateur [in my opinion]. From a strictly business perspective, *what* would fully engage the radio amateur community...sheesh..that's the ten-thousand dollar question. But band threats ain't it...

How much serious experimentation is there now and will there be in the future with amateur radio? It just cannot be maintained as it has been in the past. Jobs, family, the speed of lifestyle bar many people from such luxury as to sit out in the garage playing with sparks all night. It is probably the serious experimentation, and things such as that, where band threats would have more impact.

Again, mine is an observation strictly from the perspective of business. ARRL gets more members, ARRL gets more impact and is taken much more seriously. Band threats and technical drawings in QST just don't cut it...at least with me. And, by the indications of statistics...not with many more than me also.

I submit that, if you see that only from the anti-code folks, then you are very narrow sighted. It comes from both sides, Val, and has since I have been reading this newsgroup.

>
> There
> is something about the whole "incentive licensing" procedure, and
> the creation of an official Ham Hierarchy, that has brought out the

Absolutely. This is an idea promulgated by the FCC's testing strategy in the first place. If there had never been a mode preference, I think the situation would not be as it is.

>
> They say it's about the code, and maybe
> some of it is, but it runs a LOT deeper than that, in my view.
>

Yeah, lots deeper. How 'bout this: amateur radio is used as an excuse by a lot of people to play out their bigoted tendancies. I mean, after all, if one doesn't "speak" the same way, "do" things the same way, "act" the same way, or didn't "get here" the same way as another, then one is subject to just as mean a ritualistic beating as if one were personally pulled behind the pickup truck of another.

>
> Now,

> one might expect this kind of thing on _alt.rec.knavesAND fools_
> but I was startled four years ago to see it on THIS group.
>

I don't think I've ever been "startled" by anything here. I've been in too many peace groups, professional organizations and hobby organizations. Politics run deep. Give any topic on this newsgroup long enough and you'll have the liberal lefties vs. the righteous righties--and that's all there is to it. Leave out that most people really don't have the maturity, experience, or care to objectively argue their position, yet respect another's.

>
> And I am
> still startled today. For a while I got caught up in it again but now,

>

You really do seem to be very one-sided in your view, Val...because *both* sides in this newsgroup have been just a blatantly uncaring about each other. I don't know how many times on this newsgroup I have stated that CW is a beautiful thing to listen to...for about twenty seconds...LOL All kidding aside, I have stated many times that I really enjoy watching a good CW op, and I've seen one of the absolute best, KF9AS, a 45wpm gal (and that's on a slow day) with an absolutely mesmerizing CW skill. But, it's her gig, your gig, their gig. It's not my gig. And, to be thought of as dumbed down for my belief on CW...well, it just brings home the absolute ignorance some people can display.

Brian P Burke wrote, concerning the ARRL January board meetings, and the various items under discussion there:

>What has your ham neighbor said about these initiatives?

Funny you should ask that! I just got off the land line with him a few minutes ago. However, the major topics of our conversation were:

1) What 2-meter H/T I should get.
2) What it just cost him to bury his home's electrial lines.
3) What tower he's going to put up, since he buried those lines!
4) What I should put up for my first "serious" HF antenna.
5) What a great yard I have for a tower of my own.
6) When serious CW practice begins (next week) and . . .
7) His views about code testing going away soon.

He's been pretty well resigned to this last for quite some time, stating that, even though serious pressure for phone band expansion is right around the corner, there will still be at least SOME band protection for CW into the far future.

I'll have to ask him about the ARRL panolply of initiatives!

Val

P.S. "Panoply" -- the complete arms and armor of a warrior!

WHY does someone who simply disagrees with CW as a testing element have to bear the regard from you as a "code hater." Do you know how ridiculous you even sound when you say that? It's a stupid fucking mode on ham radio, Dick, not a living breathing entity!!!

And, why do you take it upon yourself, as many do, to value another person based on whether they know or like CW? That's about as bigoted as one can get...though you do fit nicely into that definition, so I don't know why I am so indignant to your attitude. I've come to expect nothing more from you.

heh heh heh, though if you watch carefully Mr "I am ignoring you" will
respond directly to a post of someone he is "ignoring." It's hilarious.
Another favorite tactic is to respond via someone else's post.

What a fake, Dick.

K0HB wrote, about the "Big Project" and my comment that it had to do with ARRL's efforts to get the FCC to interpose for amateur radio operators where local covenants are concerned.

>Nothing of the sort. The "big project" is related to young people
>and education.

Well, yes, it involves "education," and I'm all for it. However, it is explained in an article that begins on p. 94 of the March issue that the "meta-purpose" behind the project is the advancement of ARRL efforts to influence the Congress, and others, concerning things like the CC&R problem. It is much more than "education for education's sake" since "the future of amateur radio is at stake" right now.

Val, go to confession and get over it. After Novice Enhancement came along
I too continued to think that CW was the only "real" mode. Too much
brainwashing.

Several months later a friend came over with a six pack and a pair of dykes
and my 40M loop becamwe a 10M dipole. I've never looked back.

W1RFI wrote, concerning the January ARRL board meeting,
a lot of interesting material.

About the need for new funding:

>It goes past that, although the stock market tumble hit ARRL's
>investment portfolio somewhat, I would imagine. There are two
>factors at play. First, spectrum pressure is increasing big time.

[snip]

>What used to be possible to fund solely from membership dues
>is not possible in today's regulatory environment. Part of that
>development is the creation of special funds to which one can
>contribute.

A good idea and I can see from reading those minutes how
complicated the whole business is.

For instance:

>There are more threats than just that. Right now, 2 m, 70 cm,
>2.4 GHz, 5.6 GHz and 24 GHz are on the plate.

Ouch!

>The EMC Committee works on various interference matters, ranging
>from representing Amateur Radio on various industry committees,
>maintaining contact with industry groups and companies and
>trying to mitigate interference before it happens. That is probably
>25% of my job at ARRL HQ, the rest being related to spectrum
>protection and trying to supervise the Lab staff. :-)

Ah, yes, someone has to do it! Holding on to the current spectrum
allocations does seem like a BIG deal, considering what's happening
in the commercial sphere.

[About the minutes being moved to the web site]:

>Actually, Val, the ARRL has been doing a better job than ever before
>at telling members what is doing. The question is whether QST is the
>best vehicle to publish those very boring minutes, or whether they are
>better made available on the Web, freeing up page space for some-
>thing else.

I tell you, I think those minutes have an important function, and
if it were me in charge they would stay in the magazine. No doubt
most people don't read them and think they are a waste of space

but, well, er, I don't! Like that means anything! Anyway, isn't there something in the bylaws about this, about keeping the rank and file informed? I'm not trying to be difficult but it seems to me that as a 501c corporation one of the few things that might be mandated IS providing important organizational information to the members.
But I guess the thing is done.

No matter, thanks for your reply!

Val

I don't mind at all. If you believe you can't learn to do it yourself,
you are right.

> code skill exam.

I certainly agree, it was a real travesty when the Extra class license
exam was relaxed to the point where it required no real knowledge, and
actually not very much Morse code skill either, to achieve as the code
tests could be passed by mostly guessing at multiple choice questions
which were often constructed poorly. It really did destroy the validity
of the entire license class as something Extra, and from that day on it
never has been able to live up to its original intent and its name.

>
> Thus a "King of the Hill" mentality evolved in ham radio where Morse
> code was given the importance of everything else in ham radio combined.

Really? Wonder where I missed that. And I was here, paying attention,
the whole time while you immersed yourself in the "one hit $hit"
culture. But I guess to one who can't string more than four Morse
characters together without forgetting where it's at could be expected
to come up with such a story.

> Morse code had the almost supernatural power to elevate basically ignorant

It's the TEST, dummy. If you have a sham for a test, and no code test
of any consequence, what results can only be obvious.

IMO, having different
> permanent class levels within ham radio is a bad idea.

No surprise there, given your penchant for trivializing ham radio in
its entirety. After all, when the whole thing is worthless how can it be
worthy of a real structure and rules? Let it all hang out,

Not only are you fundamentally dishonest, you have no clue to that
fact, and can't see it in your own responses. It means nothing to you to
totally misrepresent the words of someone with whom you disagree, and
you seem to be obvlious to the fact that you're even doing it.

Lennie:

For at least the second time, I didn't *have* to know if I copied
correctly. I was just copying for the sake of copying something --
anything -- strictly for the practice. Verification of the correctness
of my copy was unnecessary. However, I will state that I did, in
fact, know that I WAS copying correctly. If I hear "dadadit" and
write down the letter "G" -- I don't have to have someone tell me
I did it right. Morse code isn't that hard; however, I guess I can't
expect you to understand that concept.

>Cut all this bullshit, radio whiz-bang. All you are doing is piling the

There was no cross-training for weather. You either got out, or went to
detox and then got out. No early retirements either. But since the comm
community couldn't satisfy our required throughput in either fixed or
tactical arenas, we had to develop our own systems, so there were limited
opportunities for weather to play "commo guy."

If you think I said that, you are not comprehending. There are many times when one mode gets through and another mode doesn't. To compare the modes, bandwidth, throughput, and power need to at least be normalized. We know that 1000w CW gets through when one watt PSK31 doesn't. So what?

I thought you were a grizzled veteran of the Korean rear echelon RTTY
sorties, Len. As uninvited and unlicensed champion of whatever cause,
you've often appeared here to tell licensed amateurs about how it is and
what they should do.

You apparently didn't read what I said. "Based on what was said, I'm guessing at the nature of your 'monsters from the ID'..." It's an honest guess, Dick. How can a guess be dishonest?

Poor baby. Always seems to know more about someone else's job than the
person who did it for years. Sort of like how you know more about
amateur radio than hams.

You've run into a number of fellows here who have used morse professionally and on the ham bands. It is obvious that it torques your jaws.

And all of the bitching you and similar types have about ham radio's present situation are guilty of the problems you are bitching about.

It is your generations that are responsible for molding the future (the future as it was to you in the past which is the now present time) and making ham radio exactly what you wanted it to be as opposed to what it is now.

Ya got what you asked for, either by actions or inactions!!

If morse code is so all-fired important and that great of value, there should be re-testing at least when the license is due for re-licensure like it is every ten years.

This way we will see how important the code is, but all of these "chicken littles" that claim that people like me have been "dumbed down" and just memorized the tests.. Actually, if someone has utilized and grown within this hobby, there is no reason why after ten years a person shouldn't be able to "ace" those tests since they have exposed themselves to much, much more within a ten year period of time, than any length of time they might have spent preparing for the initial tests.

They do this similar activity with drivers licenses and other licensure. Specifically related to me, firefighters are constantly tested and retested on a regular basis, and expected to pursue more training and education as their career progresses. Would you want anything less?? (as a citizen)

No, you technical moron. I solder my joints worthy of NASA NPC-200. You smoke them.

You come back when you've LEARNED something about theory, instead of exhaling exhalted emperor's breath.

Better yet, go crank up the gain on a receiver and copy 5-groups from the front-end noise. That's about as meaningful as you get with any arguments you try in here.

Nah. I had to get it myself...and send you a copy. He put on
his best Baa Association accent and said fuggedabotit, the big
shoots at fox-charlie shouldn't be boddadaboutit. Blah, blah, blah.

Something about a "common knowledge" situation, "everybody
does it" and so forth. :-)

The funny thing is that in the technical standards part of Part 97
the terms are defined, pinned down, no wiggle room about
"doing it like it has always been done," (nudge, wink, wink).
Morris goad is something else.

The VEs Control with a capital C. :-)

>> covers.
>
>Just how would you know that, Len?

Oh, dear, another gubmint retiree heard from, ten kinds of
certificates and only three neurons associating.

>Are they hams too?

No, they assembled WORKING spacecraft electronics.
That's a bit out of your league, old-timer. You, like
Larrie, are, by your own definition, PERFECT, so you
don't know much about anything but can sure talk down

to anyone who doesn't share your viewpoints.

>How do you do at copying them, Len? Up to 5 wpm yet, old timer?
>Keep at it and you'll have it whipped one of these days.

I'm not into your kind of sado-masochism.

You insist on that get-a-#$%^!!-license-before-allowed-to-exist, all because you don't have ONE good, civil response to give in debate. You CANNOT debate, only shout orders, crack that whip. Pfaugh. Not a good image, not even with a billboard-size wall to hang all those certificates.

Now YOU tell us why all this traditionalist amateur radio attitude is so damn good and proper and The Only Way To Go. Without putting on that uniform. Bet you can't do it.

Nah. Never tried to submit one to the ARRL...they don't pay enough
and you have to sign over all rights if they get it first.

>If I had the distaste for amateur
>radio you've exhibited, I'll bet I could find another newsgroup to
>haunt.

What "distaste for amateur radio?" I have a strong distaste for
the pushy, neo-youknowwhat, dumshits who want to control
everyone "under" them. Dave Heil fits in that profile about as
exact as one can get. Stereotypical Prussian Feldwebel with
just one ear.

>Your stuff might find more acceptance in a group where you
>aren't yet known.

Oh, my, Dr. Signal Freud is at it again, playing coy with another
variation of "be nice or nobody will 'like' you!" in here.

Idiot. That sort of thing IS for amateurs. Amateur psychos.

Why don't you regale us with more cashew-crunching stories
of being "the only ham" in an African country or "scampering
up and down towers." Those are almost as good as "Little
Billy Beeper" reruns or Larrie copying random code groups
"perfectly" and without verification.

Set a standard for all the newcomers to follow. You DID want
them to follow you, didn't you? I mean, that's the only way
you will get any order in your bund, cracking whips and all
that. SM all the way and you LIKE it. Go figger.

Interesting. I wouldn't have thought you to be the sort who lives his life based on the actions of others. If I chose to learn from others how to be a jerk, I don't think I would admit it. An interesting choice, indeed.

I think, however, if you rely on the Amateur code to justify your decision about acting differently on rrap than you do elsewhere, it will be a real stretch. What part of the Amateur Code do you feel justifies that?

>informed? I'm not trying to be difficult but it seems to me that as a
>501c corporation one of the few things that might be mandated IS
>providing important organizational information to the members.

I believe the members are informed. The magazine still will contain a writeup of the highlights of Board and major committee meetings. The minutes are all published on the ARRL web page, and the above articles will probably mention that the minutes are available in paper form for the asking.

You can easily see the minutes from Board meetings, as well as the various committee reports at:

http://www.arrl.org/announce/board.html

By the time the actual minutes would be published in QST, for the few that want to read them, they are already old hat.

>But I guess the thing is done.

The Board has been known to reverse its decisions on the basis of substantive member input. Although I don't think that there will be a loud public outcry that the minutes are going to be published only on the web or made available for the asking, if you still feel that way, make your views known to your ARRL Division Director. This is especially important in the New England Division, because I have already told Tom what I think, so if you disagree, cancel my input with your own. :-)

Perhaps it was because they knew what a self appreciating punk you are,
Lennie...

And we see where your TRUE values about Amateur Radio are...Others submit
articles to QST because they want to share something with other Amateurs.

YOU are focused on that "pecuniary" interest thing...Not enough "tribute"
for your inflated ego, no doubt.

Of course, it COULD have been an act of self-preservation...Since QST is
still in business and "Ham Radio" is...well...it's NOT in business...

>What "distaste for amateur radio?" I have a strong distaste for
>the pushy, neo-youknowwhat, dumshits who want to control
>everyone "under" them

With THAT criteria I bet you have a hard time shaving. How can you stand
to LOOK at yourself, Lennie?

In the 1970s and '80s I was big into target pistol shooting, on an informal level. In a couple of weeks I'll be attending a camp for pistol instructors for the Missouri 4-H program. However, I now shoot AIR pistols! Twenty years ago Boone County, where Columbia is located, had plenty of places where you could just "go and shoot" -- if you had a clue and were responsible. But the population here has about doubled since the late 1970s and so the shooting I have always done has become very hard to do.

Now the case of my ex-Navy brother, who lives on the edge of what is becoming a free-fire zone in Kansas City, MO, he has plenty of opportunity there. In fact, he just had to work on his roof because of bullet holes shot into it from several blocks away! Needless to say, he won't be there much longer, as his neighborhood has disintegrated over just the last few years. That is, the percentage of people who are armed, and mean it, in a very strange and threatening way, continues to steadily climb. Ugly.

Val

Well...you're right. There isn't a "caste" system to the ARS. There are
only those like yourself who try to make it one. How else should the term
"dumbed-down" be intended by you (and others)?

No, there's no official caste system. That's probably the most frustrating
to those of you who choose to *attempt* (attempt being the operative word,
there) to degrade, humiliate and shame those of us who really, really do
enjoy the hobby--just not to your standards.

>
> Newcomers will still be newcomers, whatever or wherever. It just shows,

That's your schtick...not the schtick of most "newcomers," Dick. I daresay
that most people who would encounter you on the air or here in this
newsgroup would sigh, roll their eyes, and glaze right over your affiliation

with the hobby. You hardly represent anyone worthy of being called friendly.

Yeah, uh huh...that is until you play the game as successfully as someone such as, say, Bill Gates; or until ya get so good at it that you have a "competitive advantage" (what a joke). The free-market system that you herald has its limits of acceptance, and you know it. Maybe you personally believe what you said above (and it is a nice concept that we citizens cling to). However, our government's voracity for quashing successful competition speaks for itself...one can do until they reach "a limit."

> > the dirt?
> >

I think that one's defense of the philosophy of free market, i.e., live and let live, in the competitive business environment vs. in the environment of a hobby is well placed. If you who like to be all male hormonal and "go out and get 'em" during your workaday routines (a respectable attitude to have in the work environment) bring that same attitude to your hobby, I think that's pitiful.

It will never cease to amaze me when someone is a seriuos "contester" in ham radio. It's a hobby--you win nothing for it other than paper to plaster on a wall or place in some box somewhere. Most of your non-ham friends will sigh at best and yawn at worst if they see you walking toward them with that 3-ring binder or box of cards. Remember, the first thing they are thinking is "how much money did you get for that?" The moment you say "none" you've placed yourself on the edge of their insanity list and they begin wondering about your values in life.

That aside, contesting also does have its way of eaking into the psyche of an otherwise great hobby. Most contesters I've heard on the air are arrogant, bull-hardy, greater-than-thou kinds of people. I cannot think of one I've heard that I'd even care to be curious about in terms of meeting them as a personality. Their actions on the air pretty much sum it up. Now, the two I know in person are great people--but they are also probably not "as into" the contesting as many are.

Is contesting a bad aspect of ham radio? Hell no. It's a great aspect, for a lot of reasons. It's probably been the area where the most experimentation has taken place, it gets those competitive-minded people into the hobby (possibly--as I said, most competitive-minded people aren't that way for the benefit of the type of "reward" you get in ham radio contesting), it keeps them out of "our" hair (those of us who don't enjoy that type of personality :), and so much more.

All that said, I'll really twist now and say that most contesters/DXers that I hear--while unfriendly sounding at best--are quite OK. They aren't bothering me, they aren't bothering anyone else and only engage those who wish to contact them. But the spirit of competiveness? Well, it ruins the hobby in terms of people like the Carrolls and the Rolls, and even the Heils (he's eccentrically arrogant).

> >
> > Gee, all this time and I thought I was only competing with me.
> >
>

Whether they believe it or not...most ham radio contesters/DXers *are* competing only with themselves. Well, maybe with other ham radio operators who think like them--but certainly not the mainstream populace or amateurs who aren't "into" that world. When I hear someone say "I have 342 countries confirmed" it does no more to me than hearing someone say they are on their way to work.

>
> You were. Those who have no luck at all in competing with themselves

> attempt to destroy those who do.
>

I think that's Little Dickie poo that said the above line. That's hilarious. Now he's feeling like "they're gonna destroy" him. Hey, Little Dick, paranoia will destroy ya.

Yeah, it's kind of that same dichotomy where when you scream that every ham
should know CW and it said back that it's not in Part 97 and you scream back
that just because it's not doesn't make it right... Ya know? That
dichotomy.

As I've said many times, yet it chosen to be ignored and Val will ignore it also--the reactions of people who are on the no-CW-*TEST* issue (I *hate* referring to as "code" because that terminology is part of the problem), i.e., those reactions of disdain, disapproval, and downright heels-dug-in comments are more toward the *ATTITUDE* of those on the pro-CW issue.

I don't mind at all that someone feels pro or con to the test. The problem is that most pro-CW folks aren't arguing from the perspective of the test. They have taken it upon themselves to believe that people who are opposed to CW testing also "hate" CW--a ridiculous belief at best. The basis on the con side is the test; the basis on the pro side is CW in general.

The absolute funny thing, and it is funny to me, is that CW *TESTING* is going to go a way. There's no two ways about and it would have gone away with or without NCI and groups like it. CW *TESTING* became an issue when the military and other entities began decreasing its reliance upon the mode a few years back.

I have no problem with CW, and I don't believe it will "fade into the sunset" just because people don't have to have it to get a ham radio license. I think there are too many people who enjoy the mode...it's all

over on the air and it always will be. I have a problem with the government requiring it for a ham radio license--*for the purposes it is said to test.* CW knowledge *DOES NOT* prove technical merit.

However, back to the grounded statement that most of us who have regaled against a pro-CW argument are reacting to the attitude of those pro-CW folks who are just so miserable with life in general that the only thing they have left is to hate.

This is EXACTLY what "incentive licensing" was supposed
to produce. But you can see what it DID produce, divisions
within amateur radio, big time. These divisions are said to
be about the code but, well, I don't think so, not the deepest
of them. There's a viciousness about the whole thing that
is quite startling. Why, there's even a massive poster to this
newsgroup (who is not even a licensed amateur operator of
ANY kind) who insists on bombarding the group with endless
lines of whining b*llsh*t . . . about something he's not even
participating in! Once the Green Goddess gets aholt of you,
none can save you, and you're on your way off a cliff.

Ya know, you might have accidently stumbled onto a point. (Hope it
didn't hurt too much). When the VE system was begun lots of us who had
concerns were advised to shun it like that plague it was sure to become.
Instead, lots of us put on a happy face and helped with years of
service. For nothing but the thanks of the likes of you. Seems like the
'advisers' might have been right.

>as you seem, of reasonable nature, and people like Dick/Larry, et al.

I judge other PEOPLE on how they seem to be conducting them-
selves in civil society. What * I * have been reading, since 1998
on this newsgroup, from the anti-code folks, almost to a person, is
a viciousness that goes WAY beyond any opposition to CW. There
is something about the whole "incentive licensing" procedure, and
the creation of an official Ham Hierarchy, that has brought out the
worst in a lot of people. They say it's about the code, and maybe
some of it is, but it runs a LOT deeper than that, in my view. Now,
one might expect this kind of thing on _alt.rec.knavesAND fools_
but I was startled four years ago to see it on THIS group. And I am
still startled today. For a while I got caught up in it again but now,
after only a few weeks "back" on this group, I am simply appalled
at the abounding bad faith.

For me personally CW is part and parcel of amateur radio and
always will be. Now, with its commercial demise, it's UNIQUE to
amateur radio, which is, for me, a PLUS, since I am of a historical
bent AND like to BE a little "unique", in some harmless ways!
Add to this the idea that CW can be done on little power, with very
simple equipment, and is understood around the world, and, well,
it's hard for me NOT to advocate some testing here, especially for
the very top of the tree, the EXTRA class. I don't see one thing
wrong with it, for many reasons, NONE of which have anything to
do with "hazing" or any crap like that. In my view, "arguments"
like that have brought on the lowering of intellectual content of the
whole debate, which I think was their original intent. That is, to me
the whole "anti-code" crowd has seized on code as a stalking
dog for a bad-faith attack on incentive licensing based on what
amounts to jealousy. That's my view.

What in hell are you talking about? Code is HISTORY, or soon
will be, and the battle has gone the way the anti-coders have
advocated. BUT, was the code REALLY what it was about?
I don't think so. I think it was (and IS) about the whole incentive
licensing system, and about the fact that the ARRL has set
up all of these contests and awards and DXCC programs, etc.,
thus making some hams "better than others."

There's a name for that for I won't write it here.

You don't know? The code isn't important at all. FCC and NCI, now ARRL and IARU have spoken.
Were you not listening? Of course anyone who thinks something as archiac as Morse code could ever be important would be those who are really concerned about being able to communicate under the most diverse conditions. Since you won't live where you can get on HF for years, I suppose that leaves you out.

And Val, your view is right on target, as the longterm evidence
gleaned by anyone reading this NG will soon show.
For myself, I really regret ever making the first post here. but once

the battle was engaged- and make no mistake it IS a battle- there has not been a point at which I felt I could engage on even terms. The slander and outright untruths shoveled so liberally by the nocoders has been too intense.

The argument has nothing to do with the advance of technology or its socalled rejection by hams, as is so often alleged by the code haters. It has to do with the overall communications potential of the ARS, and what will be lost with the dropping oif all code testing. If the promise of a full service license is not enough to persuade new hams to learn code to the minimal level of today, there is simply no way that most will ever be moved to do it without. Sure some will, numbers far too small to ever defend the mode from those who would keep painting it into such a small corner that eventually even the most avid CW user will quit in total disgust.

There are a few posters whose posts I never open. He has long been one. The others are added slowly over time, and I just very recently added The Gadfly, B.Burke also.

When one has nothing constructive whatever to add to the conversation, and instead only adds to the the QRM and QRN on a band, it's time to tune on.

We are not discussing using what works. We are discussing comparison of
modes. There are standards for mode comparison. You are violating those
standards. Nobody doubts your anecdotal tales. But that's all they are.
You are reporting that apples work better than oranges.

Why doesn't the Newington bunch declare W1AW "junque" and
sell it off. That would be a win-win situation. Newington
could get rid of a non-money-maker. FCC could then go after
K1MAN without fear of ancillary damage to ARRL. You would
probably need to float a survey that concludes that the
majority of US ARS amateurs no longer listen to W1AW but get
all necessary news, code practice, etc. from the Internet
eg. to show that "...it was WAY down the list of respondents
to a recent survey."

IMHO, the only reason those minutes would be "very boring"
is if they were intended to be so or that the activities of

the BoD, ARRL HQ, the Newington Crowd, or the "League" were very boring. Personally, I think the last minute attempt by two Directors to add "data" to the phone band allocation proposal was very exciting, not boring at all. By the way, just for reference, cutting the minutes from QST would be a 0.58% cost savings if $/page is linear. Who do they think they are kidding?

The FCC doesn't require skill in any other mode, Dick. Any ham who
is really concerned about being able to communicate using CW is
perfectly free to learn Morse code to whatever skill level he
chooses. That situation is not going to change.

Indeed, Val. In the interim, you could alwys excercise the filtering capabilities of your newsreader. I don't like to use filters, but since it is pointless to try to argue with that one, a simple trip to the trash for his messages makes for newsgroup harmony.

Well. Then where were the voices of the pro-CW folks who could have done
just the same? Or, is it that the opinion of no-CW TEST folks is actually a
majority? It's either that the pro-CW folks didn't care enough then to make
their opinions known--in which case they are doing nothing but whining now;
or, it is that there is a spoken majority that cared enough to make their
opinions known...

If the FCC capitulated, it is the responsibility of all, not just one side.

You'd better explain that again, but in layman's terms. You see, the 93K a year computer engineer that put that atrocious page together doesn't understand your post. Make it real S I M P L E for him and her.

How much EME work is done on HF? Hans' comment was about HF
environments.

The fact that something can be automated does not mean that it must
be, or even should be.

It is now possible to buy chess-playing software that can defeat most
human chess players. "Deep Blue" demonstrated its ability to defeat
all but the very best human players, and even those human players
cannot defeat Deep Blue
with any consistency. It is probably possible to develop an automated
chess-playing system that no human player can defeat.

But what's the point of doing so?

Yet both tests did not have to be passed to get the license. Since
1990 it has been possible to get the 13 and 20 wpm code tests waived.

Consider this simple fact, as well:

The high school and colleges I attended required passing grades in all
required courses in order to get a diploma. Failures and incompletes
had to be replaced with passing grades before a diploma would be
granted. Does this mean all of the required courses were of equal
importance? Of course not.

From what I have read, there was more. CW is not "on the way out",
btw. The test for it may be, though.

> Arguments that
> if the kids don't learn spark, they will never be "real" hams? That spark

> the spectrum to preserve history?

There were some who proclaimed "Spark Forever". As N0BK notes, the
spark coil stories are mostly mythology.

The reign of King Spark was actually quite short - perhaps 25 years in
ham radio, if we count 1900 as the starting date. The use of spark by
hams was not banned until 1927, long after practically all hams had
abandoned it.

What happened was quite simple: The superior results obtained from the
use of
"CW" transmission caused a voluntary, widespread shift away from spark
by hams. At about the same time the superior results obtained by hams
on the "short waves" resulted in hams' migrating to those wavelengths.

"CW" (in this context meaning tube transmission, and encompassing all
sorts of things like raw AC oscillator transmitters as well as
stabilized PDC rigs) simply gave more bang for the buck. Hams did not
have to be forced by law to
use it.

That reminded me of something funny. When I upgraded from
an original 4.7 MHz IBM PC to a 33 MHz 386, I installed
my daughter's games on it. She was about ten years old
at the time. She tried the new computer and then came
into the den with tears in her eyes. "Frogger" was her
favorite game until the software timing loops were
speeded up eight times. The frog always died before she
could even blink.

From: Valentine Germann <vgermann@socket.net>
Message-ID: <ua6mtnj2dbifa3@corp.supernews.com>
Source record: 38698

Hello, all,

Well, the viciousness of several recent messages, contained in threads below, has finally pushed my BS detector to the limit and the needle has bent around the post.

What * I * have been reading from the anti-code folks, almost to a person, and since 1997, is a latent viciousness that goes WAY beyond any opposition to CW. There is something about the whole "incentive licensing" procedure, and the creation of an official Ham Hierarchy, that has obviously brought out the worst in a lot of people. They say it's about the code, and maybe some of it is, but it runs a LOT deeper than that, in my view, for most of them. I think that many of the anti-code people just wanted to destroy something that hacked them off, for morally base reasons (that could never actually be stated), and because their secret desires corresponded with larger forces they have had their dream come true. But the end of code testing will not do away with the license hierarchy, or with contesting, or with the DXCC business, or with the fact that some people have a lot of time and money to put into Ham Radio, and others do not, or that some people will devise means to make their devotion to Ham Radio evident, and others will not. No, none of that will be going away, not now and not ever. So, I am NOT expecting to see any reduction in venom from some, and perhaps many, of the no-code types, once they realize that their "victory" was in many ways hollow and was not delivered on the terms they secretly desire. The battles will thus likely continue.

Now, one might expect this kind of thing among the lower-rent types one sees a lot on UseNet, but I was startled five years ago to see it on THIS newsgroup, and I am still startled today. For a while I again got caught up in the free-for-all but now, after only a few weeks "back" on this group, I am simply appalled at the abounding bad faith, and so will not respond anymore to most of those who spew on this board about the horrors of CW. I know SO many will be SO disappointed -- NOT!

For me personally CW is part and parcel of amateur radio and always will be. Now, with its commercial demise, it is UNIQUE to amateur radio, which is, for me a PLUS, since I am of a historical bent and, like many people, prefer to BE "unique", if only in a small way. Add to this the idea that CW can be done on little power, with very simple equipment, and is understood around the world, and, well, it's hard for me NOT to advocate some testing here, especially for the very top of the tree, the EXTRA class. The historical legacy of a group like Ham Radio IS important. It's part of the identity of the group. In light of this I can only view the viciousness of the anti-code types as a true psychological problem, one existing within THEIR heads. Like so many in our society today, jealousy has taken over their

minds in this area and they have thus ceased to speak and act in a rational way, much of the time, where this issue is concerned.

I don't see one thing wrong with code testing, and incentive licensing, for many reasons, NONE of which have anything to do with "hazing" or any crap like that. In my view, "arguments" like the "hazing" dodge have lowered the intellectual content of the whole debate, which I think was the actual intent. That is, to me the whole "anti-code" crowd has seized on code as a stalking dog for a bad-faith attack on incentive licensing based on what amounts to jealousy. That's my view. And because so much of the anti-code effort has been driven by this jealousy and bad faith, the debate has been marked by the viciousness we see, now on both sides, to a disturbing extent.

So today, in the spring of 2002, the code battle is over, or soon will be. But what will come next, since the REAL reasons for the anti-code jealousies remain?

I don't think we'll have to wait long to find out.

Val

Seems to me, only a small minority of hams obtained the waiver. What about the majority? For the majority of hams, the 20wpm Morse code test was considered equal in logical weight to everything else combined on the Extra written exam. And, because of that, a lot of hams started believing that Morse code was actually as important as everything else in ham radio combined. A lot of hams still believe that.

If each had to be passed to get a diploma, then by definition, they were of equal weight in getting a diploma. All the inputs to the 'AND' gate had to be a '1' for the diploma output to go to a '1'. A logical 'AND' gate doesn't care if a particular '1' is harder to achieve than the other inputs. Each logical '1' carries the same weight.

As long as amateur radio is organized onto an "incentive", i.e. caste
system, the problems will continue. That's why I advocate a single permanent
class of amateur radio license along with one temporary learner's license.

Yes, and we all might think about what this software truly
represents, when you "play" it.

>"Deep Blue" demonstrated its ability to defeat all but the very
>best human players, and even those human players cannot
>defeat Deep Blue with any consistency.

The grandmasters who _played_ "Deep Blue" were actually
"playing" other grandmasters who were being assisted by the
computer! This is the fact! Not only that, when the human op-
ponet of the computer began to get the upper hand, in that
last match, the handlers of Blue were allowed to adjust the
programming, during the series of games, showing up the
whole thing for what it was!

>It is probably possible to develop an automated
>chess-playing system that no human player can defeat.
>But what's the point of doing so?

Why, to sell computers, that's why, and to show off!
But, seriously, everyone knows that computers have
a deep seated need to play chess!

All Incentive Licensing did was replace one caste system with another that to some extent at least was more merit-based. I got into this when there was one class and a learner's permit but callsigns were strictly sequential. Get used to being patted on the head, rookie.

When we got the 1x2s the first question was what was your old call. I finally took up replying that I had sprung from the head of Zeus Extra in hand.

There was, is now but to a far lesser extent, and more than likely always will be a caste system in the ARS as to some extent as there is in every human activity.

Ever seen two lawyers in a locker room? You'd swear they carry tape measures in their jockstraps.

Cecil, you might simply want to try code you think is too fast. It prevents you from trying to read and understand the message. For what it is worth, I had a similar experience in RM 'A' school in Bainbridge, MD, while in the Navy. I was a newbie in the service and had to pass 16 words per minute to graduate (a simple task back then as I had my commercial
telegraph ticket as well as my extra). However, one had to pass each test in succession, no jumping to 16 or more. The bets were going down as it became apparent that I could copy Morse as well as a 3rd class radioman from the fleet. We both passed 22 words per minute cyper text and plain text. At 24, he failed the cypher text (but passed the plain text) while I passed the cypher text but failed the plain text test. A moment's reflection on my part revealed why; I was daydreaming about where
I wanted to work part time using my 1st class radiotelephone ticket (the armed forces paid very poorly at the time) and was trying to copy the meaning of the message in my head whilst I was attempting to put it on paper with a typewriter. I asked the chief for a sample test, not to count, at a higher speed to prepare. He agreed and asked what speed. I asked what they had. Hmmm ... 24, 26, 28, 30 and 40. Ok, gimme 40. At that speed, I didn't have the time to daydream or copy in my head. The letters came, I simply hit keys. A good page full of text. 100% solid copy. I was excused from the class. Point? Go for something that will push you - where you don't try and anticipate the next letter. A bit of a pause? Hit the space bar. Try it.

The caste system based on competition has its place in a free
market, profit-driven, economy and may the best competitors win.
But in an elective hobby, what is the purpose of putting individuals
into competition, dividing them into classes, and grinding the "lower"
classes into the dirt? This hobby is NOT about dog eat dog competition,
at least, it shouldn't be. Every member and potential member of the ARS
should be welcomed with open arms.

Thank heavens I got rid of that 56k dial-up modem. Your reply got me to thinking. I think everyone who wants DXCC should have to scan all qsl cards in 32 bit true color with a minimum 4 megapixel resolution and have
to forward all of them to 100 different organizations for verification. Upon verification, all 100 organizations would have to submit their findings,
along with all of the 4 megapixel 32 bit true color - oh, all of these scans would have to be UNCOMPRESSED - to each of the other 99 organization.
Once all organizations had received all qsls in the aforementioned uncompressed true color 4 megapixel format, they would agree to each send
their findings, along with the others' findings, along with all copies from all of the organizations, along with all of the scans, the verification
back to the applicant. If nothing else, internet users would learn to love and appreciate DXCC the way some of us amateurs have. Yes, the ISP providers would gain a nice appreciation for DXCC also.

A very vocal minority of hams have wanted to bring about the destruction
of no-coders for many years. Can you blame some of them for being pissed?

Yes, that is no doubt the hope of the NCI crowd. And maybe it will
happen that way. But the real goal, in my view, has not been met,
that goal being the destruction of anything in Ham Radio bigger than
the lowest of the low no-coders. That's the REAL goal, and that implies
the bringing down of the licensing system, the ARRL, and, if it could
be done, ALL testing. Now, never mind that these things would very
soon destroy Ham Radio. No, that's not important, not compared to
the high-holiness of my libertarian equality to anyone and everyone
who even BEGINS to think they're "better than me" or "higher than me"
or anything else than me.

There, that about sums it up. We're in for a VERY rough ride.

To be fair Val, there is plenty of blame to go around on both sides of the argument. But the issue is so polarized that the parties are deliberately "misunderstanding" each other, trying to dismiss entire arguments on typos, extrapolating incredible amounts of insinuation from simple statements, and just general cussedness.

Plus there is one not so endearing quality from some of the Procode crowd. That is the concept that "Extra Lites" such as myself are considered second class citizens by so many of them. I'm pro-code, but my inferior status in their eyes turns me right off to thier cause.

I would tell a prospective ham that learning Morse code is a worthwhile thing, they just need to buckle down and do it, and once they learned it, they could be proud of the accomplishment.

But I wouldn't send them into this fray, for sure 8^)

Off-topic: Politics, religion, current affairs, philosophy, conspiracy theories, New World Order, racism.

Disclaimer:

I am not a member of this group and am posting this without their permission and knowledge. I thought it was a neat group when I WAS a member and thought I'd let everyone know about it. So don't bitch to them about this ad.

Hardly any upper pathetic films will regularly join the kettles.
What does Jonas dye so wrongly, whenever Pilar solves the light
sauce very partly? How did Pamela promise at all the walnuts? We can't
believe sauces unless Waleed will wistfully cook afterwards.
It can waste easily if Moammar's raindrop isn't filthy. Saad, still
changing, wanders almost freely, as the cup orders inside their
enigma.

Tell Alhadin it's clever sowing in front of a porter. I was nibbling to arrive you some of my urban elbows. We care once, recollect wastefully, then expect before the car under the road.

He might hate biweekly, unless Abu dreams candles for Mohammar's dog.

We help them, then we steadily depart Neil and Bob's quiet ulcer.

It can dine shallow yogis on the hot difficult stadium, whilst Khalid unbelievably opens them too. My ugly card won't smell before I laugh it. Basksh seeks, then Gilbert quietly creeps a easy carpenter in back of Blanche's night. While lentils eerily pour printers, the buckets often tease in back of the cold grocers. The pumpkin behind the sweet structure is the weaver that fears partially. He might absolutely pull weak and attempts our elder, good pitchers for a mountain. What Elisabeth's raw jacket learns, Aslan rejects against stupid, sick lights.

It can comb active coffees, do you walk them? He'll be irrigating towards think Said until his pear lifts weekly. She wants to fill younger tyrants beneath Ali's stable. Lots of abysmal wrinkle or drawer, and she'll hatefully improve everybody. We measure the heavy cloud. Fucking don't move usably while you're recommending beside a closed bandage. Where doesn't Abduljalil attack slowly? Ronnie, beneath trees healthy and worthwhile, covers in it, playing truly.

Don't try to grasp a teacher!

Little by little, go live a frame! They explain the empty plate and answer it among its lane. Who will we jump after Raoul kicks the glad summer's painter? How did Ghassan look the poultice in front of the open fig?

I am annually full, so I talk you. Almost no solid pens are sad and other lazy ointments are inner, but will Steve love that?

Just now, Joaquim never climbs until Marion judges the rural can surprisingly. They are irritating about hollow, about dry, before polite units. I was receiving frogs to smart Moammar, who's calling among the boat's corner. For Ella the dryer's durable, alongside me it's strange, whereas on you it's tasting fresh.

The drapers, onions, and codes are all pretty and old.

Try moulding the sign's strong pickle and Hamid will kill you! If you'll like Bernadette's field with bushs, it'll strongly behave the jug. Lots of young wide oranges neatly clean as the long hats shout. Will you excuse through the winter, if Karen deeply converses the coconut? Both scolding now, Terrance and Hamid burned the bitter streets within dull cap. Plenty of stickers crudely clean the rich shore. Plenty of bowls will be short brave books. Sometimes, hens scold among clean stores, unless they're bizarre.

> out the worst in a lot of people.

Understandably and predictably so.

When I got my extra (before dis-incentive licensing) there were
beginner HF privileges for Novices and full HF privileges for
Conditional/General/Advance/Extra. Hams got along, and what
class of license you held was not something anyone cared about
very much.

The testing criteria for a "full" license should simply determine if the
operator is qualified to build and maintain a station, and operate
it in a manner that is safe to themselves and passersby, and does
not interfere with other users of the spectrum. The notion of an
"official Ham Hierarchy" has no place in our avocation. Period.

With all kind wishes,

de Hans, K0HB

> "playing" other grandmasters who were being assisted by the
> computer! This is the fact!

My understanding is that the computer decided the moves alone - based
on
software that was the result of the expertise of many grandmasters.

The software also had the ability to research an enormous database of
recorded games, looking for the same or similar game situations and
the techniques used to win.

Wouldn't this be analagous to a human player reading books on chess
and having practice games during a tournament?

HAW! Those a are good ones!

But the question is a serious one: what's the point of automating such things?

I don't believe that our current sliced-and-diced license structure
makes any good regulatory sense, I didn't compete with anyone
to gain my license.

With all kind wishes,

I think you are confusing "defense" of amateur radio with "demise",
Kim.

Fact is, there have always been threats to the future of amateur
radio. For example, other services want to use spectrum allocated to
hams, various organizations want to restrict antennas or even the use
of radio transmitting devices, RFI issues, RF exposure issues, and
many more. A strong national organization is needed to counter these
threats.

>
> The ARRL is a great organization that needs to learn how to pique the
> interest of folks to join by using other methodologies--not the same 'ol
> "threat-to-this-or-that" stuff that they've used for so long.

Most of the ARRL literature I've seen stresses the FUN of amateur
radio. And I'm talking current as well as historic stuff.

> While it's
> important business to keep abreast of issues that could threaten the hobby;

> amounts to jealousy.

I think you meant stalking _horse_, but I won't niggle over such
detail. I have a "good faith" opposition to the current license
structure, and since I've had full HF privileges since my first
Conditional license grant, and was an Extra several years before
dis-incentive licensing, your "jealousy" card doesn't play with
me.

Perform this experiment, if you will. Turn on your HF rig and
tune it to 14.150MHz when 20M has a lot of US signals
at your location. Put on a blindfold and slowly increment
the receive frequency. Based on the operator skill, the
technical content of the conversation, and signal quality
see if you can detect when you have tuned to 14.175 (the
end of the Extra exclusive portion). Then blindfold yourself
again and see if you can tell when you have tuned to the
top end of the Advanced portion.

If incentive licensing has been a success, the boundaries
on the band between license classes ought to be apparent
to the most casual observer. Unfortunately, they are
undetectable by the criteria I mention, therefore we must
conclude that incentive licensing is a failure.

With all kind wishes,

An incentive system and a caste system are polar opposites.

An incentive system rewards achievement. It's a meritocracy. In the case of license exams, demonstrating more knowledge and skills is rewarded by more privileges.

A caste system rewards who or what a person is, regardless of achievements. It's based on things a person is, not what they have done. The best known caste system is/was in India, where people were born into castes ranging from Brahmins to untouchables, based solely on who their parents were. There is no analogy in American amateur radio licensing.

A "caste system" in licensing would exist if, say, privileges depended on things like eye color rather than passing tests.

> That's why I advocate a single permanent
> class of amateur radio license along with one temporary learner's license.

Such a system would be very discriminatory.

I think the best workable system would have at least three levels of license, with the privileges earned related to the knowledge/skills demonstrated.

N2EY wrote, about Deep Blue and chess:

>My understanding is that the computer decided the
>moves alone - based on software that was the result
>of the expertise of many grandmasters.

What does it mean "decided" when the total input
is external to the machine and has no meaning to
the machine . . . which is a machine. The great
scandal of that last match was that Deep Blue was
said to "learn" and somehow integrate new information,
including surprise moves by the opponent. However,
when things began to go bad for the machine, due to
surprise moves by its human opponent, Deep Blue's
owners and handlers cheated, by cramming in new
HUMAN information, from the "advisor" grandmasters,
and not really telling anyone exactly what was going on
until the whole thing was over. The guy playing the
machine knew the score but he was getting so much
money that he didn't say "boo" -- until it was over and
he had received his check!

Disgusting, really.

As for the point of automating chess, well, as you
say, it's a great training aid. But the real deal is,
I think, the fact that it IS able to be simulated, due
to the design of the game, and there is a built-in
cachet to somehow "beating" a human with a machine
at this "supreme intellectual game."

I'm waiting for the first Great American novel, written
by a computer, on spec, and without any prompting.
Now THAT would be interesting!

Val

Dick...are you at all serious. Shannon's Law has no more cracks in it than
any other theorem. The fact that you think there is a defect (crack)
because morse
be copieable (for any of the reasons... greater power, slower "baud" rate)
when
a PSK can't be copied is the epitome of unscientific thought.

> Keep your scientific comparisons for the lab, they

falls under the
> Yogi Berra theorem.

Bunk...the channels weren't identical so the comparison is invalid.
If anything, you are arguing for more robust coding schemes, better
FEC and possibly a "slower" PSK rate for certain emergency
situations.

Under the instant condition of getting a message through you
can use whatever works for you...BUT the outcome and lesson
learned should be what else can be done in the future to allow
continued use of the preffered mode. Perhaps increasing power,
running a slower PSK rate, developing more robust coding schemes,
etc.

There is truth in what you say. However, I learned a long time
ago that certain people are not worthy of respect. Once that
fact has been demonstrated then, ah, there is no purpose
in giving even a single inch, once one has sullied oneself
by mixing it up with them. For this reason I won't be replying
to them very damned often in the future. They are not worth it.

Well, what else can you expect from the people who have
been in the field for many years and have had this system
forced on them from above! They played the FCC game
by the rules and climbed the tree fair and square, most of
them, and then saw the whole thing trivialized, first by the
"waivers" and then by the other changes. It does not matter
whether these changes are "better" or "worse" for Ham
Radio or World Peace, or whatever, the particpants in the
old system, many of them, are going to be disgruntled.

> I would tell a prospective ham that learning Morse code is

I was explaining what I meant by "importance". They are the same
if one is talking logically, which I was. Someday you are going to
have to familiarize yourself with black and white thinking.

>
> Why not?

No need to say why not...the burden of proof
is on those that want it so.
That's because,
for regulatory requirements to exist they
MUST be defendable by the government.
The NPRM asked for input from all as to pro/con
of morse testing. The results, published in R&O
showed NO credible and/or compelling reasons
to retain morse testing...other than on a minimus
5 wpm basis to satisfy current ITU treaty
agreements.

Cheers,
Bill K2UNK

Len, you are the sourpuss who seems to have some need validate your
existence by putting mere radio amateurs in "their place". You made
your statement regarding happy old men. It has now come back to bite
you in the ass.

> All you seem to be able to do is pick on "little old men."

A singular grumpy little old man with no amateur license is in evidence.
Do you feel picked upon? Do you have any feelings that you have picked
on others?

> >> You are totally LOST on the theory presented within the
> >> covers.

> >
> >Just how would you know that, Len?

> to anyone who doesn't share your viewpoints.

Ahhh, you must have missed the part about this being an amateur radio
newsgroup. One would expect to find radio amateurs here. We don't see
many lady factory workers. Your last sentence was a hoot after I mused
on its source.

> >How do you do at copying them, Len? Up to 5 wpm yet, old timer?
> >Keep at it and you'll have it whipped one of these days.
>
> I'm not into your kind of sado-masochism.

> You insist on that get-a-#$%^!!-license-before-allowed-to-exist,
> all because you don't have ONE good, civil response to give in
> debate. You CANNOT debate, only shout orders, crack that
> whip. Pfaugh. Not a good image, not even with a billboard-
> size wall to hang all those certificates.

You post. Therefore we know you exist. Your comments to Larry are
certainly not debate. Now you've gotten yourself into capitalization so
we know you are worked into a lather.

> Now YOU tell us why all this traditionalist amateur radio attitude
> is so damn good and proper and The Only Way To Go. Without
> putting on that uniform. Bet you can't do it.

I'm not wearing a uniform, Len. In the past, I've told you the whys.
You seem to have a problem with tradition, with the ARRL, with radio
amateurs in general (despite your frequent denials). You aren't a ham.
Your words aren't likely to carry much weight with hams or with those
who regulate them. You're a newsgroup Harold Pransky. All of your
writing is on the outside of the envelope.

> What in hell are you talking about? Code is HISTORY, or soon
> will be,

That you believe that reflects no understanding
of the many hundreds of pursuits that people "voluntarily"
do. People "keep alive" use of manual gearbox autos,
they hunt with bow and arrow, they play golf, not
because anyone mandates that they do so...rather they
do it simply because they enjoy it. Morse will
live on with its following of users for that reason alone...
inspite of the "doom and gloom" negativity spouted by
the Dick and Larrys of the world.

> and the battle has gone the way the anti-coders have
> advocated.

The only battle is over code testing. that's it!

> BUT, was the code REALLY what it was about?

Conspiracy theory alert....

> I don't think so. I think it was (and IS) about the whole incentive
> licensing system, and about the fact that the ARRL has set
> up all of these contests and awards and DXCC programs, etc.,
> thus making some hams "better than others."

Nothing in the new regulations, licensing, now or in
the future has anything to do with ARRL contests, DXCC, etc.
Those that wish to follow those paths are free to follow it.

As for the incentives, they still exist...there are still
three levels of test. The reality, however, has nothing to
do with licence class as the license is just a gateway.
I judge you and all other hams by what they do...not by
the license they hold. I know many outstanding hams
that are techs, generals and extras. Likewise, I have

met hams that are class A idiots who are also techs,
generals and extras. Is the idiot Extra to be more respected
than the excellent tech?

Bravo Sierra, Sir Cecil.

The Red Chinese and the Rooskies have found out that they fare better with competiton and incentive rather than "one size fits all".

Socialism is a failure. "One Size Fit's All" never does.

My yarns are true. They relate to amateur radio. Do you have true
amateur radio stories involving yourself to tell us?

> Set a standard for all the newcomers to follow. You DID want
> them to follow you, didn't you? I mean, that's the only way
> you will get any order in your bund, cracking whips and all
> that. SM all the way and you LIKE it. Go figger.

Er, I don't have a bund or a whip, Len. It is interesting to see what directions your fanstasies take you though. Newcomers needn't follow me. They can find plenty of folks willing to help them. It is a cinch that newcomers to amateur radio won't be following you. You don't have a story in amateur radio. You don't have a history. You're a dead end.

You're one happy old man.

Wrong. It was often possible to take another subject (i.e. electives)
depending on the actual program.

> Does this mean all of the required courses were of equal

Those who try to displace the "burden of proof" usually have no argument to make. This is another case in point.

>The results, published in R&O
>showed NO credible and/or compelling reasons
>to retain morse testing...other than on a minimus
>5 wpm basis to satisfy current ITU treaty
>agreements.

The results, when tallied, all add up to "because I don't want to"...nothing else.

Morse Code continues to be a viable, basic, uncomplicated mode of communication. It DOES continue to allow communications when most other modes went packing.

It does not require a degree in porgramming to use, nor does it require hundreds of dollars in ancilliary equipment to make it viable. basic communications can be had for a handful of parts.

It continues to allow international communications where voice communications due to a lack of common language or other dialect-realted anomolies make it difficult to communicate.

That a majority of people want to do away with it has nothing to do with it's viability or usefulness. It has EVERYTHING to do with a lack of initiative and individual skill.

Unless you can prove otherwise?

Let me see if I get this: You believe in a free market of modes ("live and let live") but not in a free market of licenses (no more "live and let live"). You believe that if I pass an Extra exam and you don't, that is somehow associated with dogs eating one another. You believe that if I pass the Extra and you don't, that you are being ground into the dirt?

Gee, all this time and I thought I was only competing with me.

So you'll stick with your mistaken definition then?

> It is understandable to do that for a profit-making business
> but why do that inside a hobby for amateurs? Why set up a
> system designed to make some members feel bad about their
> hobby?

Do you really believe that making some radio amateurs feel bad was the purpose behind incentive licensing? I held a General class license for some years and an Advanced Class license for some years. During those years, I never felt bad even one time that someone else had succeeded in passing a higher class exam. I studied and passed the additional exams because I wanted all the privileges available. Did you study and pass exams because you felt bad? Have you ever known anyone who indicated that he felt bad because another held a higher class license?

It must be this new age we live in. We wouldn't want anyone's self esteem to suffer due to another's success. That wouldn't be politically correct.

Maybe you won't, but if anyone starts downgrading the mode and no one speaks up first, I will respond. OOK CW has value and use in the Amateur Radio Service. You weren't around a number of years ago when WA6VSE and I went more than a few rounds. :-)

>especially for the very top of the tree, the EXTRA class.

It would be more effective to advocate some use of CW here, Val. First, I don't think that testing will survive too many more rounds of revisions to international and then national law. When the time comes with the FCC, you should speak your mind, even if that is contrary to what you believe will be the outcome, because the whole concept of a free society is that each individual gets to petition his or her governement for the law that he or she feels is best. The whole concept says that the lone dissenting voice should be heard.

But even more important than testing is use. I know 20-wpm tested hams that literally had the code-key-burying cermony in their backyard, surrounded by all their friends. Amateur Radio gained nothing by testing them. The same will hold with the 5 wpm hams, and if we old cogers with CW experience and enthusiasm for the mode don't find a way to encourage them to spread their rather slow wings, many will not become CW ops. Some will, just because of the value of the mode, but most hams try new modes after seeing others having fun with them. The things we say about CW right now better sound fun or we are not being very good salesmen.

Fortunately, the negativism about CW by those claiming to be its proponents does not extend across all of amateur radio.

> The historical legacy of a group like Ham Radio IS important. It's part of
the
>identity of the group. In light of this I can only view the viciousness of
the
>anti-code types as a true psychological problem, one existing within THEIR
>heads. Like so many in our society today, jealousy has taken over their

>minds in this area and they have thus ceased to speak and act in a rational
>way, much of the time, where this issue is concerned.

I am not sure I see the visciousness. From whom? Me? I love CW -- I use it all the time. Cecil? He, too, operates about 99% CW. Bill? While not almost exclusive like Cecil and me, he gets on CW from time to time, as does a former rrap denizen, Rick Tannehill. Carl? He could care less, but has repeatedly says that he has absolutely no objection to people who want to use any mode. Brian? I think his big issue is with the test, though he has said a number of things about CW that I have told him I think are not true.

>I don't see one thing wrong with code testing, and incentive licensing, for
>many reasons, NONE of which have anything to do with "hazing" or any crap
>like that. In my view, "arguments" like the "hazing" dodge have lowered the
>intellectual content of the whole debate, which I think was the actual
>intent.

I think they really see it that way, though, so the statement was, IMHO, an honest expression of belief. Frankly, the whole issue of Morse code testing would not make the top 10 major problems facing amateur radio today. RFI, spectrum, CC&Rs, enforcement, youth recruitment ... we can all make up a list and I bet most of us would not put code testing in the first 10.

IMHO, amateur radio will survive just fine with or without code testing. Code will survive just fine with our without code testing, unless many of those say things about the mode in an attempt to save code testing that convince newcomers that it is not worth trying.

>That is, to me the whole "anti-code" crowd has seized on code as a
>stalking dog for a bad-faith attack on incentive licensing based on what
>amounts to jealousy. That's my view.

Many of those who advocate the removal of Morse code testing already hold the Extra. What jealousy? My reasons for believing that Morse code should not be tested center on the fact that Amateur Radio has another long tradition -- of offering value to the radio technology of the day. We still do so, but Morse code is no longer part of that value outside of Amateur Radio.

If the only way to preseve Morse code use in Amateur Radio were by testing, I might feel differently, but I feel that the value of the mode can be promoted and people will learn to use it. Every other operating mode survives in Amateur Radio, and hams put a lot more effort into building their stations than they would put into learning and using code.

> And because so much of the anti-code effort has been driven by this jealousy
> and bad faith, the debate has been marked by the viciousness we see,
> now on both sides, to a disturbing extent.

And over the years, I have been insulted by both sides, but some of those who have insulted me have turned out to be staunch friends. :-)

>So today, in the spring of 2002, the code battle is over, or soon will be.

Of course not. What happens internationally will be only the first stage. The FCC will still have to make a decision, and although the restructuring Report and Order offers some real clues about their thinking, the battle over the FCC rules and the anger will not stop for years to come.

>But what will come next, since the REAL reasons for the anti-code jealousies
>remain?

I don't think that there will be much come next. Of those who are avowed anti-code-test folks, who do you think would want to see any reduction in the content of the written? Not me. I am doing what I can to see more material brought to the Question Pool Committee. I will let the others speak for themselves, but a "No Written International" will not find any acceptance in the Amateur community, IMHO.

>I don't think we'll have to wait long to find out.

2005 is my guess for the earliest we will see any FCC changes in code testing take effect.

Lobster anyone? :-)

> usually have no argument to make. This is another case in point.

No case in point at all. Merely just a fundamental
reality of government regs. You want code testing to
be retained...YOU gotta justify it. Those that oppose
code testing have no burden of proof to sustain.

> >The results, published in R&O
> >showed NO credible and/or compelling reasons
> >to retain morse testing...other than on a minimus
> >5 wpm basis to satisfy current ITU treaty
> >agreements.
>
> The results, when tallied, all add up to "because I don't want
> to"...nothing else.

Yes Sir, guess them FCC folks are just dumb and stupid for
not seeing what you do in the results.

> Morse Code continues to be a viable, basic, uncomplicated mode of
> communication.

So? The same is true for other mdoes that have NO
mandated "skill" test requirement. Ending morse testing
doesn't change your statement in any way and people
will be free to pursue code or not as they so choose.

> It DOES continue to allow communications when most other modes
> went packing.

Apples and oranges again.

> It does not require a degree in porgramming to use, nor does it
require
> hundreds of dollars in ancilliary equipment to make it viable. basic
> communications can be had for a handful of parts.

So?

> It continues to allow international communications where voice
> communications due to a lack of common language or other dialect-realted
> anomolies make it difficult to communicate.
>
> That a majority of people want to do away with it has nothing to do
with
> it's viability or usefulness. It has EVERYTHING to do with a lack of
> initiative and individual skill.

The issue is code TESTING...not code USE. Same old effort
to deflect the issue of testing by shifting to a USE claim.

> Unless you can prove otherwise?

Once again...I need prove nothing. Reread (above) the reality of
regulatory justification...burden of proof.

Cheers,

>
>How much EME work is done on HF? Hans' comment was about HF
>environments.

I know of no EME work being done on HF, but the fact that this was a recording of an EME echo ~20 dB below the noise is less important to the discussion than the fact that it was a CW signal ~20 dB below the noise. A machine decoded what this reasonably skilled human could not even know was present.

>The fact that something can be automated does not mean that it must
>be, or even should be.

I think we are talking about could be. I certainly would not support a mandate that people were only permitted to decode morse code by machine.

>It is now possible to buy chess-playing software that can defeat most

I'm not talking about economic systems, Steve. I'm talking about
a hobby involving amateur volunteers. There's just no good reason
for a hobby to have an institutionalized class system.

Good grief...the "I did it, so should you argument again."
When they stopped testing people on manual gearbox autos,
did that trivialize the efforts of those that had previously
had to take the test on a manual?

Does today's engineering students being able to use a
calculator trivialize those that went before and had to
learn and use a slide rule?

Cheers,
Bill K2UNK

In article <a7v8lk32fij@enews3.newsguy.com>, "KC8PMX"
<kc8pmx@NOSPAMdiamondcs.net> writes:

>If morse code is so all-fired important and that great of value, there
>should be re-testing at least when the license is due for re-licensure like
>it is every ten years.

It's all a state of mind, Ryan. All of the PCTA old-timers have
developed a mindset that idolizes morsemanship above all else
in a hobby activity. It has been glorified beyond reasonableness.
:-)
Someone is sure to jump in and rail about "ham radio isn't a
hobby but a Service (with a capital S)" which falls into another
little myth. That is part of the dreaming and idolization of a
hobby-become-a-lifestyle...with quasi-religious overtones of
worship, piety, and devotion.

The whole point of the messaging in here is NOT about the
subject at all. It's about all the self-professed, self-propelled
morsemen who, having passed a morse test once, insist on
glory, status, privilege, honor, respect for accomplishing
something superhuman. They are extremely important and
do not hesitate to tell everyone how superior they are.

>This way we will see how important the code is, but all of these "chicken
>littles" that claim that people like me have been "dumbed down" and just
>memorized the tests.

Ryan, that "dumbing down syndrome" is just their own insecurity
manifesting itself. From decades of precedent, the PCTA morse-
men know damn well that they will NEVER be re-tested in
anything unless they allow their license-for-life to expire after
grace. They are thus fortified with the impunity to sneer at
everyone else...and do not hesitate to show it. :-)

>Actually, if someone has utilized and grown within
>this hobby, there is no reason why after ten years a person shouldn't be
>able to "ace" those tests since they have exposed themselves to much, much
>more within a ten year period of time, than any length of time they might
>have spent preparing for the initial tests.

That's a perfectly logical, reasonable, and practical observation.

This newsgroup is NOT about the logical, reasonable, or practical.

It is about the puffery of those who have made it and want the
respect, honor, glory they feel they richly deserve. :-)

Nobody, repeat Nobody, can possibly ever accomplish what
these self-styled superbeings have done...and they let every-
one know that by taking out all their frustrations and angst
against those that do not revere them for their god-like status.

>They do this similar activity with drivers licenses and other licensure.
>Specifically related to me, firefighters are constantly tested and retested
>on a regular basis, and expected to pursue more training and education as
>their career progresses. Would you want anything less?? (as a citizen)

Governments require recertification in all areas concerning health
and safety of its citizens. That's only logical and reasonable when
public safety is at issue.

The problem is that a hobby activity is not involved in public safety
anymore than any ordinary citizen is involved in public safety. The
hobby of amateur radio is regulated and certified-as-a-tool-of-the-
regulation-process due to the physics of EM waves. Radio
hobbyists have to obtain a license in order to transmit legally.
This license is then confused with all other "licenses" either
deliberately (for self-importance purposes) or inadvertently (after
decades of bombardment by media-oriented organizations).

Individuals that need something, anything, that puts them above
the "average" human will latch onto most anything that rationalizes
that self-image. Some will dream of the glory and tales of heroism
of bygone times, of saving the Titanic once again through the skill
of morsemanship, thus they project themselves into the "hero"
personna and wear the invisible cloaks of honor to attest to their
inherent wonderfulness. To others it has become a Way Of Life,
an inflexible mindset where "amateur radio is all about CW on
HF working DX;" there is nothing else but that. To approach their
god-like perfection all must Do As They Did or "suffer the
consequences." :-)

The subject of morse testing for an amateur license has never
been the real issue. The real issue has always been what the
PCTAs had to endure to achieve their status, titles, privileges.
All others must do as they did. Period. Full stop. :-)

Anyone can do it if they apply themselves, take the time, and its available in a local area. Good for accredited college course credit. Good for personal knowledge advancement on new technologies, even if not for credit. There's always self-teaching.

There are hundreds of texts on the market today about electronics and radio. Self-teaching requires discipline and dedication. That can't be obtained by collecting a lot of wallpaper certificates...it has do be done well enough to be able to handle assignments successfully. Big fancy titles and engraved paper don't mean squat to electrons or EM fields...you have to meet them on their terms, not yours.

Some folks just can't hack it and try to dump their frustrations on others. Doesn't matter to me or electrons or EM fields. All three of us have worked together just fine for decades and we continue to do so. :-)

Heh heh heh...Miss Congeniality she ain't... :-)

> And we see where your TRUE values about Amateur Radio are...Others submit
>articles to QST because they want to share something with other Amateurs.

QST hasn't been regarded as a "technical" periodical in years.

Of course, for those who find Ohm's Law to be a terribly difficult
concept and need coaching in it, it would seem like "rocket
science." :-)

> YOU are focused on that "pecuniary" interest thing...Not enough "tribute"
>for your inflated ego, no doubt.

Every one of us professional freelance writers consider markets
and author's compensation. Why shouldn't we? The word
"professional" indicates pecuniary compensation is done.

> Of course, it COULD have been an act of self-preservation...Since QST is
>still in business and "Ham Radio" is...well...it's NOT in business...

Not sure what that means. QST survives because it is a
membership magazine and has the demographic base of
170 or so thousand ARRL members. It could NOT survive
as an independent unless it turned into CQ or 73.

Ham Radio Magazine and Ham Radio Horizons were both
independents. HR lived through 22 years, starting well
after all the other amateur radio periodicals were in business.

QST should be self-sustaining as a periodical, staff and
all publishing costs borne strictly on advertising revenue.
The ARRL benefits from certain article contents in that
their author agreements permit them to publish anything of
an author's in other periodicals without having to pay a
single dollar in royalties or compensation.

Strictly in terms of dollar income, the percentage of
freelance writers who get their majority income from such
writing is only a single digit. The "income" from articles in
hobby-recreation market periodicals isn't worth minimum
wage rates. Writers for that market do it because they
like to do it. No other reason.

> With THAT criteria I bet you have a hard time shaving. How can you
>stand to LOOK at yourself, Lennie?

Not a problem...haven't cracked a mirror in my life. :-)

> ....or Lennie's stories of sending/relaying 1.2 million messages as an
>army comm center clerk.

No. MOS 281.6, Microwave Radio Relay Operation and Maintenance
Supervisor (the decimal point denoted specialty or supervisory details).

By using the FOIA, anyone can access my military records and
verify the above MOS and other pertinent assignment details.
Search under Army Serial Number RA16408336 and Army Unit
8235 (Far East Command Signal Service Battalion). Note: My
records were not burned in a bad fire at the Army Records Center
a few years ago.

The statement of the number of messages sent per month over
ADA and WAR facilities was in the Pacific Stars and Stripes
weekly in the fall of 1955. ADA handled 220 thousand messages
per month, Washington Army Radio did 1.2 million per month.
Absolutely NO communications were handled by ADA in any
form of OOK CW or morse codings a half century ago.

> Yep...Just like Lennie has set for folks considering a career in
>"professional" radio, Dave.
>
> Makes ME want to run right on down and sign up for 14 years of night
>school!

I would strongly suggest some social behavior counseling before
doing that. Like about two years worth. I doubt you could last the
entire period. :-)

If college credit courses are given in a local area, they are an ideal
solution to furthering one's education, either just for knowledge or
towards obtaining a degree of any kind. That let's one continue with
"day job" income and, again if there are a number of repeated courses
in different semester periods, allows for absences due to temporary
business trips for one's employer. That takes perseverence and
dedication. The end result is a personal confidence in being able to
handle an assigned task successfully.

Everyone has a choice in life in this country.

> it's viability or usefulness.

Virtually no one wants to do away with CW. It's the code *requirement*
that is under fire and must be justified. Any ham is free to learn
Morse code to whatever skill level he/she desires.

From: Clay N4AOX wyn@worldnet.att.net

>Why doesn't the Newington bunch declare W1AW "junque" and
>sell it off.

That decision would and could not be made by the ARRL HQ staff. The ARRL Board could make that decision. Let your ARRL Director know that you do not want your membership dues dollars spent on W1AW.

I do know that over the years, the bulletin aspect of W1AW has been scaled back, as other, better, means of obtaining information were made available.

>FCC could then go after K1MAN without fear of ancillary damage to ARRL.

I believe that the times the FCC has gone after Mr Baxter, it was over the lack of a control operator for his "bulletins."

>> Actually, Val, the ARRL has been doing a better job than ever before at
>> telling members

>[those with Inernet connection and interests in frequent
>use of it]

Yes, people do have an obligation to read news and information if they expect to know news and information. My statement applies to the articles and information in QST, too. Though a bit less than can be done on the web, most of what is put on the web is also put into QST, the ARRL Letter and, in condensed format -- gasp -- on the W1AW bulletins...

>IMHO, the only reason those minutes would be "very boring"
>is if they were intended to be so or that the activities of
>the BoD, ARRL HQ, the Newington Crowd, or the "League" were
>very boring.

I have been at a few Board meetings, and heard tales about those that I didn't attend. "Boring" is not a word I would use. And be real, Clay -- minutes are, by their nature, boring, in my experience. They are meant to be a formal recording of what transpired at a meeting.

>Personally, I think the last minute attempt by
>two Directors to add "data" to the phone band allocation
>proposal was very exciting, not boring at all. By the way,
>just for reference, cutting the minutes from QST would be a
>0.58% cost savings if $/page is linear. Who do they think
>they are kidding?

I agree; that was a pretty exciting deal.

0.58% * $12,000,000 = $69,600.00. I could buy a lot of new test equipment for the ARRL Lab with that, or attend a few important industry meetings. And I don't see it as a cost-savings issue at all, Clay. The number of pages in QST are going to be determined by the amount of advertising, just like every other magazine in the world. What would you want to see in QST? Minutes that you have already read on the ARRL Web site, or 3-4 additional feature articles a year instead?

We need to take back our neighborhoods. Instead we leapfrog across the
countryside from one antenna restricted neighborhood to the next. The
prices of homes keep rising because there's constant demand to get away from
bad elements. The commute gets longer. The congestion grows.

Nope, the intentions were good. The results were predictably bad.
Incentive licensing set up a structure that allowed the upper class
to heap abuse upon the lower class. It's not a new phenomenon. It's
human nature and therefore was entirely predictable. There is
absolutely no reason for a ham radio licensing hierarchy to exist.
Let's have one license so that performance alone determines
hierarchy within ham radio.

Not all members have access to the web, but all members DO get QST.
ARRL is a radio club, and QST is first and foremost the "Official Journal"
of that club. As such, QST should first and foremost contain "news of
the club". Membership issues (BoD minutes, Section News) should not
be crowded out of the Official Journal to devote more pages to pablum
like "The Doctor Is In" or "Chinese Radio Sports Association Officials
Visit ARRL". (I didn't make that one up!) Put that crap on the web.

With all kind wishes,

de Hans, K0HB

> You don't know? The code isn't important at all.

That's NOT what we've been saying, Dick. Pull that big waxy plug out of
your ears.

Morse/CW is AS important as any other mode. Since NO mode is mandated, why
is there a single mode (cw) EXAM? Shouldn't there be other mode exams? Or
couldn't we fold questions on Morse code in with the questions on RTTY,
Packet, AM, SSTV, FSTV, etc?

Of course not. According to you, Morse is more important than all other
modes. Just say it and be done with it. The truth will set you free.

Poor baby, still hurt are you? You can't see the fun I'm having
all the time in poking little needles into all your pompous
jingoistic balloons? :-) :-) :-)

>A singular grumpy little old man with no amateur license is in evidence.
>Do you feel picked upon? Do you have any feelings that you have picked
>on others?

Poor baby...definitely still hurt. Tsk, tsk. :-)

No amateur license, still the professional license. :-)

>Yet you didn't bother to answer the question. How would you know just
>how much Larry knows?

it's evident. he just can't talk about technical things in radio
unless he's read it as advertising copy. :-)

all that time when larrah was in school, being summa come
loud, bragging about "job placement offers" and then winds
up a bus driver with the fancy title "paratransit operator!" :-)

>Ahhh, you must have missed the part about this being an amateur radio
>newsgroup. One would expect to find radio amateurs here.

no kidding! :-) it always seems to be the same ones, too. :-)

>We don't see many lady factory workers.

one doesn't find many females in this predominently white
male hobby with wayyyy too many male chauvinists, either.

But these weren't "lady factory workers" on a production line,
either. Spacecraft are built in Clean Rooms. Soldering and
micro-welding require NASA certification. Everyone worked
using 10-power stereo microscopes...and inspection was
done the same way by NASA personnel.

Not really "lady factory workers" but you wouldn't know the
difference.

>Your last sentence was a hoot after I mused on its source.

no, what is a "hoot" is imagining you knowing anything about
spacecraft or clean rooms or precision assembly. State
doesn't get into that much. :-)

>No, and you aren't into amateur radio yet either.

...and with herr heil's and others' attitudes, it isn't looking
like a fun hobby, is it?

don't worry, pudgy long-timer, your privileged extra bands
on hf look secure.

>You post. Therefore we know you exist.

Nietzsche is peachy. :-)

>Your comments to Larry are certainly not debate.

the summa come loud bus driver has never attempted debate
in here. he issues mister-sergeant memos and proclamations. :-)

>Now you've gotten yourself into capitalization so
>we know you are worked into a lather.

poor baby. i will write a la e.e.cummings then so your ancient
eyes aren't all a twitchy. :-)

>I'm not wearing a uniform, Len.

davie sure fooled a lot of others, then. sure as hell looked about
as brown a brown-shirt can be! :-)

>In the past, I've told you the whys.

oh? a "word to the whys" is sufficient? :-)

>You seem to have a problem with tradition, with the ARRL, with radio
>amateurs in general (despite your frequent denials).

i have a large problem with "traditions" then keep regulations
static and unchangeable.

i have a problem with the arrl that seems to do the same thing.

i don't have any problems with amateurs "in general." i have
problems with individuals who insist on foisting off their
personal value-sets on the others "for their own good" or the
generally snotty sonsabeepers who want to denigrate others
for not being "as good as they are." i've got a problem with
some of those amateurs who insist that all must have "fun"
only in the way they have fun

for that reason i have this very large needle that is used to
perforate all those pompous balloons of self-importance.
more fun! the noise must be truly deafening on the other
side of the screen! :-) :-) :-)

>You aren't a ham.

i'm a human being. try it sometime, you might like it! :-)

i'm a radio-electronics hobbyist who is also a professional
in that field. both are interesting to me. it's too bad that
some, like heil, insist on their own personal definitions of
hobby activities and seek some elitist status that all must
approach before being granted an audience.

>Your words aren't likely to carry much weight with hams or with those
>who regulate them.

it's true that i don't carry many weighty hams despite this
easter meal tradition of having one for dinner. :-)

maybe davie thinks i have something nasty in general about
having a ham for easter? :-)

last i looked, the fcc accepts input from all citizens on all civil radio regulation matters, any radio service. the fcc doesn't require its staff or commissioners to have amateur radio licenses in order to set amateur regulations. what the fcc does with that "input" is up to them. if they don't do what i think is nice then there are other avenues of petitioning my government within the constitution of the united states of america. i don't need to "write my district director" of the arrl. :-)

>You're a newsgroup Harold Pransky.

no. just a citizen of the usa with a large needle who likes puncturing over-inflated balloons of the joe mccarthy variety. joe mccarthy...old "tailgunner joe" who tried to keep society free of "undesireable elements." the same type of activity engaged in by the control-freak long-timers forbidding any hobby fun not authorized by them. :-)

>All of your writing is on the outside of the envelope.

i've pushed the envelope before, even made new envelopes. you keep on making sure your envelope is securely glued shut so no undesireables creep in. that seems to make you happy. :-)

you tellum, mistah radio expert! :-)

> It does not require a degree in porgramming to use, nor does it require
>hundreds of dollars in ancilliary equipment to make it viable. basic
>communications can be had for a handful of parts.

yah, that's why all the other radio services dropped it or never
considered it in the first place. :-)

> It continues to allow international communications where voice
>communications due to a lack of common language or other dialect-realted
>anomolies make it difficult to communicate.

international morse code is a representation of the alphabet,
numbers, and punctuation of the "western" or alphabetic
languages. the majority of the languages of the world are
syllabic or hieroglyphic-symbolic, not using an alphabet.

in order to use international morse code anywhere by a native
of a non-alphabetic language requires that they also learn a
totally different written language. that seems trivial to those
whose native languages are already western and alphabetic,
but it is not trivial to the majority of the world.

the above is indicative of the many variations in on-off keying
codings in the world.

> That a majority of people want to do away with it has nothing to do with
>it's viability or usefulness. It has EVERYTHING to do with a lack of
>initiative and individual skill.
>
> Unless you can prove otherwise?

easily done. one merely has to open up part 97, title 47 code of
federal regulations and look for "intitiative." or any other
regulatory-required "demonstration of worthiness to be demonstrated
to those already licensed (to old regulations)." isn't there, is it? :-)

While I do not disagree with this I do think you might have your causes
and effects mixed up a tad.

If Abuse is one of the 1,483 sub-activities in this hobby, it is going to
exist and an excuse for it is going to be found. And historically it has
been. If there is a way to be a 'cut above' it will be taken by some,
stumbled into by many, and abused by a few.

When we got in the licenses were sequentially issued initially so my K$\square$
lacked the status of a W$\square$ and I heard about it. For a short time after a
Nam-era lapse, I had a WB$\square$ and joined a club. When my $25 reclaiming of
the K$\square$ came thru, I moved to third on the club seniority list and pissed
off a lot of grey heads. I was the same lovable Advanced I was the day
before in spite of getting a How to Cure Your Novice Lisp from ARRL with a
big A on the label. Why do you think I did it and the FCC let me?

When the FCC broke up the great Seniority Game, it was indeed a boon to
ARS. But they knew it was going on: the rules at the time required me to
change to a call sign with the proper district code in it but it also gave
me one of similar format. I suspect you got your 1x3 W6 that way.

Hell, some of the knuckle-draggers claim superiority because they are
younger; there is no end to bases, real and stupid, on which to claim
superiority. But like a lot of things in life, you do it to yourself or
allow it to be done. My N came out after W and K, if this is a bother to
me it is only because I let it but try getting a W or K thru vanity
although N calls exist. Must make a diff to someone.

I happen to agree with you on a single class system although I could argue Jim's idea as well but to expect to cure human nature by declaration of equality is simply ridiculous.

I'm talking about the viciousness that you're talking about.

> Code is HISTORY, or soon
> will be, and the battle has gone the way the anti-coders

Anti-code EXAM.

> have advocated. BUT, was the code REALLY what it was about?

A good part of it. It was an "enabler" in a system designed to segregate.

> I don't think so.

OK, what was it about?

> I think it was (and IS) about the whole incentive
> licensing system,

Yes, the Incentive Licensing System gave the code exam equal weight with the
entirety of everything else in amateur radio combined. If incentive
licensing were about gaining new MODE priveleges, that would be one thing,
but examine this comparison and tell me where it makes sense:

Novice: written and code. Priveleges: HF CW, Data, SSB, at 200 watts.
VHF (220 and 900) all modes, 200 watts.
Technician: written only. Priveleges: VHF+ all modes, 1,500watts!!!
1,500watts is a beginners license? 73 Magazine ran a story about converting
a microwave oven to 750 watt transmitter. Mmmm - fried eyeballs.
Technician Plus: written and code. Priveleges: all of the above.
General: written and code. Priveleges: 160m, HF, VHF+ all modes, 1,500
watts.
Advanced: written and code. Priveleges: 160m, HF, VHF+ all modes, 1,500
watts.
Extra: written and code. Priveleges: 160m, HF, VHF+ all modes, 1,500
watts.

If a Novice is considered to have enough knowledge (written exams) and enough CW ability (Morse exam) to operate on HF, doesn't that make all the other HF licenses redundant? Perhaps 160M operation is so unique that it is properly the domain of only Generals and higher. But I doubt it.

Notice that the last 3 licenses are all bands, all modes, and all 1,500 watts. What does higher code speeds have to do with a sliver on the lower end of each band? Why of course, nothing. There's nothing in the exams, nor in the behavior of RF that the lowest license hasn't addressed or satisfied.

Incentive Licensing is a meaningless and arbitrary construct. The intention may have been good, but in practice it has only created numerous divides within the service.

> and about the fact that the ARRL has set
> up all of these contests and awards and DXCC programs, etc.,
> thus making some hams "better than others."

Other than being denied the slivers of spectrum where the DX might be running Q's, the ARRL awards programs have nothing to do with it.

We've said that the Novice license was a gateway to more learning. Is the Extra license the END of learning? Of course not, so why have ever higher "classes" if the learning shouldn't stop. Jim advocates even more licenses that the previous 6. At one time, the General License conveyed ALL priveleges. And hams didn't have to stop learning once they got all priveleges. So one "all priveleges" license and one "learners permit" license will satisfy all needs in amateur radio. Anything more than that is redundant, superflous, and divisive.

> There's a name for that for I won't write it here.

We've been calling it "bigotry" for years.

Val, I've said all of the above many, many times. I'm glad I've taken this opportunity to state it again.

While I'm at it, one other thing I've said again and again, prior to the latest restructuring: "What I fear most about the impending restructuring is a lack of enforcement. And what I fear the most about maintaining the Status Quo is a lack of enforcement."

The Morse/CW exam has allowed some absolutely crazy people into the service. Enforcement is the answer, not arbitrary exams to keep the hordes of unclean CBers out. They've been with us for many, many years.

What's your new call?

73, Brian/N0iMD

Val, you might want to get away from that selective reading you've been
doing since 1998 and reread some of Dixie's stuff.

You will be known by the company you keep.

Dick, dick, dick. If all the wonderful attributes of your favorite mode
aren't enough to entice people to learn it, then guess what? Hey, the FAA
still uses AM for critical aviation communications. Why don't you grab the
AM banner and see if the FCC will mandate a separate pass/fail exam...

D'ya 'spect anything more from a man who professes to "hate" CBers, yet sounds very much like the worst of the CB crop? (not all CBers are bad) D'ya spect him to display anything different, based on the lack of intellect displayed thusfar in his postings?

I mean, the guy can't even communicate without poor use of English, which really isn't all that bad if he had something important to say. But his sentence structure is horrific and, most of all, he attempts to say nothing important. My guess is he sits in the nude (yyyyyyyyuckkkk) in front of his computer with his 6-pack right close by, and probably picked up his welfare check yesterday.

Then why haven't you been able to pass a 35 question test and acquire an
Amateur Radio license?

I do seriously believe you are simply incapable and sufficiently ignorant
of the material when youa re not able to call it up on-line.

>Some folks just can't hack it and try to dump their frustrations on
>others.

Such as an ex-electronics technician who can't make it past 10 minutes in
a VE session?

>Doesn't matter to me or electrons or EM fields. All three of
>us have worked together just fine for decades and we continue to
>do so.

Not within the hallowed halls of Part 97, you don't. By the way, you ever
send that GROL off for renewal? (*)

Steve

(*) Before those who know that the GROL is a lifetime license jump on me for
that one, Lennie insists that he allowed his to expire. Mr. "I Am A
Professional Radio Engineer" is oft to make such stupid comments and then try
to find some excuse as to why he did it.

This was but one of many.

> Agree on the heirarch, but why so many classes with "all priveleges?"

Conditional and General were essentially the same license, but the
Conditional was issued via mail (similar to today's administration by
VE's).

Advanced was in limbo, similar to what it is today. No new Advanced
licenses were being granted, but holders were allowed to renew.

Amateur Extra had one "benefit", and that was that you needed
that license to establish a station in space, but you gained no
HF privileges over Conditional/General/Advanced.

> Should the FCC be in the "gratuitious certificate" program?

I don't care one way or the other, especially since all the work
is done by volunteers. Some folks like to display such
things, so I suppose it does no harm.

With all kind wishes,

>> And we see where your TRUE values about Amateur Radio are...Others
>submit
>>articles to QST because they want to share something with other Amateurs.
>
>QST hasn't been regarded as a "technical" periodical in years.

What does that have to do with YOUR motivations?

The comment was that "Others submit articles to QST because they want to
share something with other Amateurs."

In as much as your only response is that it's "not" a technical
periodical, and since you obviously have nothing else to contribute, we can
reasonably assume that you have no other experiences or knowledge to share
outside the theoretical.

But we already knew that.

>Every one of us professional freelance writers consider markets
>and author's compensation. Why shouldn't we? The word
>"professional" indicates pecuniary compensation is done.

And once again, you are called to task for your obvious lack of awareness
of your situation and surroundings.

This is "rec.radio.AMATEUR.policy" (emphasis mine), and is about the
AMATEUR Radio Service. NOT "professional" radio.

Attempts to draw parallels between the two outside of the physics of
radio wave generation and propagation is foolish. But then you ARE RRAP's
Chief Clown.

>Not sure what that means.

I am sure you don't.

>QST should be self-sustaining as a periodical, staff and
>all publishing costs borne strictly on advertising revenue.

And as a non-voting membership eligible person, your opinion and a couple
bucks will get you an overpriced cup of coffee at Starbucks.

>The ARRL benefits from certain article contents in that
>their author agreements permit them to publish anything of

>an author's in other periodicals without having to pay a
>single dollar in royalties or compensation.

People who submit items to the ARRL do so in order to further the means of Amateur Radio, not "make a buck".

You frequent laments against the ARRL are very transparent. I am sure that you thought your "writings" warranted top dollar for thier obvious genius, and when ARRL didn't meet YOUR criteria, the rants and accusations ensued.

>Everyone has a choice in life in this country.

Including a choice to NOT succeed, which you seem to have exercised liberally.

Not that we are surprised, Lennie.

>you tellum, mistah radio expert!

I'd ask you to explain what part of that paragraph was not true, but since you and I already know that it IS true, I'll save you the embarrasment.

>> It does not require a degree in porgramming to use, nor does it require
>>hundreds of dollars in ancilliary equipment to make it viable. basic
>>communications can be had for a handful of parts.
>
>yah, that's why all the other radio services dropped it or never
>considered it in the first place.

Money...they save millions in "human resource" funds by not hiring Morse operators.

My earlier premise that Morse is a dependable mode is not in contention by ANYONE who has employed it. It's simply an "expensive" mode in terms of keeping operators on staff.

>> It continues to allow international communications where voice
>>communications due to a lack of common language or other dialect-realted
>>anomolies make it difficult to communicate.

>international morse code is a representation of the alphabet,
>numbers, and punctuation of the "western" or alphabetic
>languages. the majority of the languages of the world are
>syllabic or hieroglyphic-symbolic, not using an alphabet.

Absoluely not germane to what I said.

And in ANY case, ENGLISH is the international radiocommunication language...So now are you going to rant and rave against IT'S use, too?

>in order to use international morse code anywhere by a native
>of a non-alphabetic language requires that they also learn a
>totally different written language.

More evidence of lack of experience.

>that seems trivial to those
>whose native languages are already western and alphabetic,
>but it is not trivial to the majority of the world.

Better discuss that with the hundreds-of-thousands of kanjii operators in
Japan.

You can't even keep up with the conversation. *I* started this subject
by describing what I encountered. YOU attempted to change to a
"comparison of mode efficiencies", an argument which was rejected but
you continue on track.

This thread is closed by default due to your inappropriate trolling.

You continue to be beyond amazing. Claiming genius you exhibit the
worst sort of damfoolery. You are not a fool, yet deliberately misuse
the term "caste". Check your Websters on that one. ANYONE who can (and
is willing to) pass the required tests can qualify for any ham radio
license of any level.

You are just intellectually dishonest, and you damn well know it.

There's only one fly in your ointment, jerk. ANYONE can, if they wish,
get ANY ham radio license. It is entirely up to them. No caste involved
and you know it.
Newcomers will still be newcomers, whatever or wherever. It just shows,
and they can't help it any more than oldtimers can.

That is pure bullshit, and you know it. No one here is likely to be responsible for the licensing of more no-code techs than I, as a VE. I loathe the irresponisble individual -such as you- who aspires to tear down the ARS to a minimal level to which you can then become the "boss" by virtue of your alleged but unproven superior intellect. Yes. Cecil, I consider you a loathsome individual. That's just the way you have led it to become.

Sliced-and-diced? How's that again? Tech for beginners, General for
those who are no longer beginners, and Extra for those who are
definitely NOT beginners?
(assuming, of course, none of tbem just sits on their butts bitching
about having to actually take a test to advance). That's a full load of
nonsense!

So you insist that what one hears on the bands is the sole criteria of whether or not Incentive Licensing was successful. What a crock. You would insist that the only things one can know, all one's learned capabilities and gained skills are clearly identifiable by his on the air chatter, even though he may be chatting with someone who might have little or no such knowledge and capability? Hans, I'm really surprised at you. I thought you were smarter than that.
What one has in his library that he studies and learns, his workshop ant what he had learned to produce in it, the antennas he builds rather than buy, none of those things, among many more, could ever be detected by your inane methodology.

"Bunbk" all you want, Slick, my receiver had a channel, and it was capable of copying CW when PSK3 would not print. On several stations on the same frequency area. You can twist it any way you wish, the facts do not change. Cecil insists that if I had narrowed the bandpass to 50 hz I would not have been able to copy CW either, but he has certainly not proved that nor need he do so, I assert that it simply does not matter. What worked was the more "inefficient" of the two modes. That fact is what really matters.

You two dipschits still don't understand. *I* was comparing a mode that
did work with one that did not. Nothing more or less.

That's why you never learned to copy CW that you can't write a
character at a time. One must think differently to do it and you can't.

It's not their hobby they feel bad about, rather they feel bad about themselves for their shortcomings in achievment therein. Ring any bells with you?

The answer to your patronizing question is "Obviously, yes."

But I wasn't talking about this newsgroup. I was talking about
Amateur Radio.

With all kind wishes for the early return of your clues,

de Hans, K0HB

And you erroneously reported that the same equipment was being used for
both modes. I pointed out your error and the subject shifted to how to
compare modes. You apparently still do not know how to do a valid
comparison having tucked tail and conjured up a crack in Shannon's
Theorem.

I'm glad to see all are well.

It appears that another year's worth of debate hasn't produced any
perceptible change in anyone's positions on the issues.

Oh, I saw in the news that the Russians finally discovered the cause
of the Kursk submarine disaster. Apparently, a bored seaman aboard
the ship, also happened to be a radio aficionado, and he had rigged up
a system to practice CW, using parts from one of the torpedos that he
was trained to maintain... well it turns out that he wasn't too hot of
a technician, and he miswired his contraption, which was connected to
the torpedo's arming system controller power supply. Well, you can
all imagine the sequence of events, as the excited young apprentice
began to hunker down for a 15wpm speed run...
beep-beep-beeeeep-beep-BOOOOM!!!

Yes, my friends, MORSE CODE sank the Kursk.

From Webster's: "caste - any rigid system of social distinctions".
Dick, that certainly describes your view of amateur radio. Every
time you use the term "nocoder", you are referring to the lowest
class of social distinctions within ham radio.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll. Maybe as high as a 1.6 for the intense stupidity of the premise, but a 9.8? Never! The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant! They demand a recount!

With all kind wishes,

Well.... yes and no. I could operate mobile, but that can get expensive with the gas prices going up again. (cops harass ya if ya park anywhere around here!) HF morse would definitely be unsafe as trying to write it down and then switching over to trying to send while driving would definitely be a dangerous endeavor. Guess I have my whole life ahead of me and why rush into every last little thing about ham radio all at once (spread it out a bit) is the only positive upbeat way to look at it.....

As far as the "re-test" subject goes, I would be willing to demonstrate my retention, and growth within the hobby even yearly if that was a requirement. Don't care if it was even a 300 question essay format either.

Ryan

Since you won't live where you can get on HF for years, I

You are denying that there are some hams who wish the nocode tech
license had never existed? If you deny that, you are a bigger liar
than I thought.

We have witnessed the nocode tech license attacked on this very
newsgroup, Dick. How you can deny something so easily proven
is beyond belief.

The receiver didn't copy the CW, Dick, you did. The receiver didn't copy PSK31, your computer did. You are NOT your computer. Therefore, the two signals were not coming through the same channels. How you can claim that your ears and your computer sound card are identical channels is beyond belief. Do you really have SMD components instead of ear drums?

If you look at HF amateur radio from the view of a non-involved historian, the only regulatory change which had a significant statistical impact on the growth of HF use by hams was the advent of the Novice license a half century ago.

Other than that, changes in licensing requirements related to HF have served only to generate sales of paper and ink to print new license manuals, and to excite the excitable minority. No other impact is evident, and won't be after this next curve in the regulatory road. Hams will still be hams, and the excitable minority will get excited all over again. In about 2011 we'll be awaiting the next "restructuring" plan.

Yawn.

With all kind wishes,

And then we can just blithely assume that your 91 year old aunt WISHES
to obtain a ham radio license?

You, sir are an umbelievably vicious liar. The people who have been criticised here by any, and mostly all, of us who believe in code testing are those rather like you, I fear, who are too clueless to understand why we believe there is still a role within ham radio for Morse code beyond novelty, and who sat on their fat asses for decades whining about the code test rather than just doing it. They deserve every work of criticism. No code techs who have no interest in anything beyond their VHF activities are NOT included and never were. As a VE I helped many of they get licensed.

Why don't you go back and reread Ed Hare's post on the subject? He says
it is indeed possible to copy CW through a PSK width filter. Maybe he
can jerk you back to reality.

Really, this is so moot a point it's not worth wasting more time on.
It's a real shame you guys are so poor quality hams you have no idea
what I'm talking about.

Do you ever really read anything here? CHeck N2EY's history postings. It was only a few years later that planning for the change began, and it culminated in incentive licensing in '68. But the planning started a full 120 years earlier.
Note that incentive licensing lasted for over 32 years before you dolts finally wore poor old Bill Cross down.

>
> So the "preferred" mode is the mode that doesn't work under the instant
> circumstances. In your world, maybe.

The preffered mode is whatever YOU want it to be.
Today, emergency comms do NOT consider morse
```

to be a preffered mode. You can argue that till hell
freezes over...but it will be your own opinion vs
reality.

For the reading comprehension impaired...what I said
was: "Under the instant condition of getting a message
through you can use whatever works for you..." NOTE -
That does not rule out YOUR use of any mode.

I then said: "BUT the outcome and lesson
learned should be what else can be done in the future to allow
continued use of the preffered mode."
The point again is that morse is NOT that preffered mode
anymore. Disagree all you want, but doing so won't make it
so.

More to the issue, I then said: "Perhaps increasing power, running
a slower PSK rate, developing more robust coding schemes, etc."
That point you can ignore if you want...others can and will
think it through, do the work and help evolve the technology
such that future incidents won't result in a need to change modes.

And, in the end....nothing said here indicates any "crack" or
hole in Shannon's law.

Cheers,
Bill K2UNK

The poor quality is in your lack of being able to articulate
the specific technical differences between the two signals to
understand WHY you could copy the morse by ear while the
PSK signal was not copyable by the computer. You mention
nothing about power, nothing about throughput speed
(i.e. symbol rate/baud rate), etc.

Cheers,
Bill K2UNK

And I would submit that "viciousness" is a word that goes far beyond
the truth of what anyone has said. I ask Val to offer up any of
my alleged "viciousness" or that of others on the no-code test side.

Cheers,
Bill K2UNK

Revisionist history! Even assuming that has been Dick's position all
along, it sure isn't THE position of the procode test advocates. Many
still believe the nocode tech should never have happened. What
is the amount in "many", I don't know, but it is surely not just a handful.

Ahhhh! So in what you've incorrectly described as a caste system, we aren't talking about you or me but only of others. Can you produce one individual who has been "ground into the dirt" by a meritocracy-based system of amateur radio licensing? Can you produce proof for your claim that incentive licensing was "designed" to make hams "feel bad"?

Tell us more about the ham radio St. Valentine's Day massacre. How many dead and injured? Where did it take place?

Any response to my comments that you would have a "free market of modes" but not a "free market of licensing"?

I'd say you're shooting blanks on this latest of your numerous tangents.

Dave K8MN

Without knowing each person's history, that can't be answered.
However, it is clear to me that many hams (a lesser percent as we
go forward in time because commercial code has ended) did
get paid to learn code. The pages of QST, CQ have often
cited a ham's military morse training and, on occasion, a prior
commercial morse training for some hams. Maybe none of us in
RRAP fit that mold, but clearly there are hams that do.

Soon? 1967/8...thats 15/16 years by my math. Almost a generation.
And, the conditional preceeded 1952 by a year or too if I recall
the history correctly (Jim N2EY can clarify).

...but you previously stated that the system was "designed" to make other hams "feel bad". Have you had a change of heart or did you just blurt something out which was in error? As to performance: We already have a system in which testing is done in order to demonstrate knowledge of the subject. I don't know of many countries which have only one amateur radio license class. Most have at least two so that there is an entry level license.

So that other hams won't feel bad, do you think it might be a good idea to regulate the maximum amount of money which could be spent on amateur radio by any individual? Should we limit the power for all to 100 watts and limite tower height to 35 feet with a limit on the number of yagi or quad elements? Maybe we could set the tower height limit based on geographic location, i.e. those who dwell on hill tops might only be permitted 30 feet while valley dwellers could put up a tower of 70 feet. I feel your pain and would hate to see anyone's self-esteem lowered.

And YOU consider that "soon"? 16 years may be soon when comparing
archeology, but even for government regulation that's a long time. In
1973 the dolts in Washington established a national 55mph speed limit
which wasn't altered until 1987...that sure wasn't soon in any driver's
mind.

> But the planning started a full 120 years earlier.

Huh? Perhaps you meant 12 years...but even that isn't
soon.

> Note that incentive licensing lasted for over 32 years before you dolts
> finally wore poor old Bill Cross down.

I wonder if Bill Cross even has 32 years of service with
the FCC. By the way...who are the "dolts" you
refer to? NCI wasn't even a twinkle in anyone's
eye until about 1998. Who in the ammateur ranks
lead the "wearing down" of the FCC before that?

Cheers,
Bill K2UNK

I share your views, Hans, and have made my views known to the Roanoke
Division Director. His reponse was that the matter had been tabled
until a later date--an answer worthy of Senator Byrd. I once wrote to
the Senator asking support an issue and, though I read his response
several times, gleaned that he was both fer it and a'gin it.

> That's precisely the correct number of license classes: 1 (one).
Anything
> more is superflous.

On this point I disagree. I can see justification for three
licenses:

1 - A beginner, low power, limited frequencies
2 - An intermediate, moderate power (up to maybe 500 watts), all or most
frequencies
3 - Advanced/Expert/Extra, full power, all frequenies.

None would require code. The ONLY real justification for
different privileges that could be tied back to the license
class is power. I can accept a limited frequency gain for
the expert over the intermediate to be an incentive...but
only a small amount. Current additional frequency privileges
between Advanced and Extra would do it. The reality of
frequency privileges is that they just do NOT tie back
to any of the syllabus materials one is expected to learn
for the higher license...and that's true today also.

Around the globe, many countries get by with only two
licenses now.

Cheers,
Bill K2UNK

Dick, on what would YOU base the measure of success? What means
would you suggest to gauge if incentive licensing is a success?

> What one has in his library that he studies and learns, his workshop
> ant what he had learned to produce in it, the antennas he builds rather
> than buy, none of those things, among many more, could ever be detected
> by your inane methodology.

If I don't even build an antenna am I not a good ham?
Are techs, novices, generals forclosed from building
their own antennas, their own transmitters? IF the only
way to judge success of incentive licensing is truly
beyond measure...then the question of success/value
of incentive licnesing is truly unanswered...and it
undermines any claims of the value of incentive licensing.

Are you talking to me or to yourself?

> No amateur license, still the professional license. :-)

You still don't get it. There are those of us who have worked in radio professionally. There are those of us who are radio amateurs. This particular newsgroup is about amateur, not professional radio. You are not a radio amateur.

>
> >Yet you didn't bother to answer the question. How would you know just

Since I don't recall that Larry has ever brought up many technical matters and since your latest outburst is based upon whether he knows who manufactured a particular item, I'll have to discount your knowledge of Larry's technical abilities.

> all that time when larrah was in school, being summa come

You don't find many women as amateur auto mechanics either. There is nothing which prevents women from participating in amateur radio.

> But these weren't "lady factory workers" on a production line,
> either. Spacecraft are built in Clean Rooms. Soldering and

> micro-welding require NASA certification. Everyone worked
> using 10-power stereo microscopes...and inspection was
> done the same way by NASA personnel.

Not many hams have the need to have their work done in clean rooms or to have their soldering NASA certified.

> Not really "lady factory workers" but you wouldn't know the
> difference.

Sure, I know the difference. The ladies you describe are factory workers with specialized skills, working in a clean room. To my knowledge, they aren't radio amateurs. That's where they are similar to a guy like you.

> >Your last sentence was a hoot after I mused on its source.
>
> no, what is a "hoot" is imagining you knowing anything about

> doesn't get into that much. :-)

No, I don't know much about clean rooms or precision assembly. I don't expect to have a need for those skills either. Most radio amateurs don't.

> >No, and you aren't into amateur radio yet either.
>
> ...and with herr heil's and others' attitudes, it isn't looking
> like a fun hobby, is it?

It's tremendously enjoyable, Len. You know as much about that as I do about clean rooms and precision assembly.

> don't worry, pudgy long-timer, your privileged extra bands
> on hf look secure.

I haven't worried. There aren't any "Extra bands" only Extra Class segments within bands. I don't limit myself to those.

> >You post. Therefore we know you exist.
>

> only in the way they have fun

Your bias against anything which smacks of authority or tradition is
showing. You aren't a participant. You aren't a radio amateur. Soccer
players don't take their cues from those sitting in the stands booing.

> for that reason i have this very large needle that is used to
> perforate all those pompous balloons of self-importance.
> more fun! the noise must be truly deafening on the other
> side of the screen! :-) :-) :-)

In your Walter Mitty world, I'm sure the noise is deafening and I'm sure
that imaginary needle seems quite large. In reality, you have as much
impact as a fart on an ocean liner's deck. It can't be smelled and
can't be heard.

> >You aren't a ham.
>
> i'm a human being. try it sometime, you might like it! :-)

Nice line, Quasimodo.

> i'm a radio-electronics hobbyist who is also a professional
> in that field. both are interesting to me. it's too bad that
> some, like heil, insist on their own personal definitions of

> hobby activities and seek some elitist status that all must
> approach before being granted an audience.

You can continue to do those things. You'll still need to pass an exam
in order to add amateur radio to your list of hobbies. I absolutely
insist upon that being the only way you'll have the opportunity to join
the world of ham radio. So does the FCC.

> >Your words aren't likely to carry much weight with hams or with those

You've had your say with the FCC. You've had your say here. The
Commission isn't required to give weight to your views or to adopt them.
No one here is required to give weight or credence to your views. Your
Congressman simply won't understand them.

> >You're a newsgroup Harold Pransky.

Imaginary needles create only imaginary noise--especially when they come
from a make-believe radio amateur.

To put it in perspective, when the incentive licensing change
happened, Dick was three times as old as he was when the
Conditional license was established with all amateur frequency
privileges.

Gee, you don't seem to understand that wasn't for the nocode techs at
all, rather was for guys like you, Carl and Bill, and The Gadfly, who
would rather sit and whine about the requirements until the sole ham
making rules at the FCC got tired of hearing it and capitulated,
allowing your Extra Lite.

Youi're so full of crap you stink way up here a thousand miles away. No one ever hears of such nonsense until rrap, and even then the vile spewings of the likes of you forced it.

It's not a new phenomenon. It's
> human nature and therefore was entirely predictable.

It's entirely predictable that those who actually achieve are trashed by those who don't? Not that I ever heard or read. And for sure the reverse isn't any more predictable, outside your twisted mind.

There is
> absolutely no reason for a ham radio licensing hierarchy to exist.

So now that you realize the Grate Dumbdown was not at all a success, you now prefer to just do away with the whole licensing scheme. Send out licenses in Cocoa Puff boxes. Right, we got it.

If you'd been paying attention you would know that I had no control of what the other stations were doing, no way to alter any condition. Above speil remains useless.

> And, in the end....nothing said here indicates any "crack" or
> hole in Shannon's law.
>
Un-huh. And what I said is "Could there be a crack in Shannon's theory" relating to real world communications? When the most efficient mode fails and the least efficient works, something smells, and all the explaining and rationalization you can do won't alter the facts. We know what Shannon found. We also know that it has meaning in design and explanation of systems, and indeed does explain why I saw what I did that morning. But it didn't do a thing toward solving the instant communications problem, which you and Cecil have a real problem understanding for some reason.

For a drastic change that affected a large portion of the persons
involved adversly in that they lost a significant portion of their
allowed spectrum, it did indeed require about 10 years of work within
and outside the government to finalize the plan. Compared to the last
restructing which was completed in the term of less than a year, but
withdrew privileges from no one, such a long term of processing is not
at all surprising, despite your uninformed assertion.

```

Oh, I believe the nocode tech license should have never happened, I have no problem stating that up front. But it did, and I helped it by testing many into the license. I know that it isn't a total bust, but it sure isn't a smashing success either. The dropout rate, not to mention the "toss the HT in the drawer and forget it, this isn't for me" rate, while the license stays active in the database and props up the "numbers". What it did is usher a new era into ham radio that has been less than useful, in fact it has further dropped the standards of the ARS rather drastically toward the noise floor of a zero technical base. Of course, there are a handful of Dr Willimason's who just wanted a private chat channel, despite their lofty education, and I have no problem with all that. The larger problem is that the nocode tech license largely serves as a substitute for CB for a huge percentage of those holding it - those who got in knowing nothing and intend to stay there.
And they are not alone. The question pool tests had the same effect through the Extra class in far too many cases. But hey, this hobby is in GREAT shape.

Ah, so explain a document of 25 January 1999 in the collection of comments on FCC 98-143?

The Dill Sergeant is not being addressed here, only an academic and intellectual.

> Nor yours, judging by the number of "Len's a creep" messages that have
>permeated the NG lately.

Well, ole Stebie, you've generated a few thousand of them...:-)

> He's just more civil about absorbing your abuse, Your Lyingness.

Poor baby. Still going at it with all those pejoratives? :-)

> I am sure you see it that way...But that's because you have absolutely
>no supporters here due to your established history of lying and abuse.

Oh, my, still at it..."lying and abuse!" :-)

I need no "supporters." :-) [no jokes about that...]

Is it necessary to "choose up sides" or what? :-)

I was of the opinion, and still am after 17 or so years of communicating by computer-modem that everyone stood on their own words in this medium. I'll stand on my words. I don't expect to please others, coddle them, or "be part of a group (think)."

Nobody should "look for love" in a newsgroup or public message board. One has to be mature enough to take a position and defend it.

Some others, like yourself, are unable to address a subject but instead try to jump on the person of the message-maker. You spend far too much time on that, threatening, intimidating, a gross amount of spewed libel month after month just to satisfy your deluded little ego.

> You find it necessary to call people names and analogize THIER opinions
>with neo-Nazism, then wonder why you can't find any support, even from those
>you alledge to "support".
>
> >Ein volk, ein welt!
>
> Point made.

Four words in German are "Nazi?!?"

The above translates to "one people, one world." What is "Nazi"
about that? It's a phrase, a political catch-phrase.

Poor Stebie, just can't think out of the box, can't see a comment
on group thinking made to another...he feels duty-bound like a
latter-day Quixote to tilt at everything he perceives is a
windmill. Those are the windmills of his mind.

I'm trying to argue the code test issue. It's still there in
the regulations, in the recommendations of the ITU-R.

There's far too much spent on arguing personalities in here,
almost all of them licensed, long-time radio amateurs. That
keeps on signalling that amateur radio is not a "fun hobby"
except on the long-timers' terms, under their direction.
There is no openness, little freedom, all order and discipline
as if it were a military organization.

>Amateur Radio license?

I'm not after an amateur radio license. I'm in here trying to argue the code test requirement for an amateur radio license.

This is an unmoderated newsgroup. As such it is open to anyone with access from their ISP. There is no requirement to have a valid amateur radio license in order to participate.

You may work towards making this a moderated newsgroup. You may contact Paul Schleck or Jeffrey Herman on achieving the closed society you appear to need. Since they are both licensed radio amateurs you should have some common ground...until they disagree with you. :-)

> I do seriously believe you are simply incapable and sufficiently
>ignorant of the material when youa re not able to call it up on-line.

That is not a coherent or meaningful sentence. What must one "call up on-line?"

Obtaining an amateur radio license is not my object in life now. I made that clear several times in public postings for the last five years. I am arguing against the morse code test requirement for an amateur radio license. It's that simple.

Many cannot understand the above. It is quite possible that they are so wrapped up in their personal lifestyle choice that they cannot argue a subject on the basis of a subject. That is their loss, not mine. Most seem to react on a highly personal basis when confronted with a general subject issue.

>>Some folks just can't hack it and try to dump their frustrations on
>>others.

>
> Such as an ex-electronics technician who can't make it past 10 minutes
>in a VE session?

Not understood statement. I stopped being an employed
electronics technician in 1961 and have held employed positions
as an electronics engineer thereafter until retirement.

It was not my intention to get an amateur radio license at any time
that I've been trying to argue the code test subject.

>(*) Before those who know that the GROL is a lifetime license jump on me for
>that one, Lennie insists that he allowed his to expire. Mr. "I Am A
>Professional Radio Engineer" is oft to make such stupid comments and then try
>to find some excuse as to why he did it.

In an off-hand remark once, I said I'd allowed my General
(commercial) Radiotelephone Operator License to virtually
expire...by leaving it in our safety deposit box. Note the use
of the word "virtual." It is still there. There is so little need
for that license now that it will probably remain there as
nothing more than a personal memento.

That license was originally a First Class Radiotelephone
(commercial) obtained fully in one test session in a Chicago
FCC field office in 1956. That license enabled me to earn
extra income. Some radio amateurs use their amateur
license as qualifications for a major part of their personal
income. Earning income classifies an occupation
as "professional." Nothing dumb or stupid about that.

> This was but one of many.

No. Robeson is fixated on his terrible need to GET someone,
any which way he can, whether by outright lies or
disinformation or just not understanding written words. He is
expected to continue with that tirade until he gets psychological
counseling/therapy. There is little hope for debate on any
subject with him.

Why, you're right, Bill, When even all the test questions and their
exact answers are handed out in advance, who could ever be expected to
actually learn anything before getting that Extra? It's all moot anyway.

Yeah, When, within a half dozen years, FCC began forming action to undo
what they had just done that half dozen years previously, it is more
than clear that they realized what a mistake that earlier action had
been. How can you even think about disagreeing? Incentive licensing, by
contrast, was in force for over 32 years. It would *still* be in force
except for all the juvenile whiners. You don't think Bill Cross is dumb
enough to act against all that 'victim' mass, do you? Hey, he's a career
bureaucrat and that means he works for politicians. That means PC All
The Way, he wouldn't dare cross swords with a (GASP) Victim Group, it'd
mean *he* was the goat, and from that moment on, his government career
is toast. NO WAY!
```

2940. Long Reply to N2EY's Long Reply!

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-29 18:06:51 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <ua9a8cmhq96od0@corp.supernews.com>
Source record: 38813

Hello, all!

I'm running behind on the replies to what I believe are interesting and significant messages. Below is one of those. My original comments are preceded by arrows while N2EY's comments are not. My most recent comments, to N2EY's comments, are inside [[double brackets]].

>So, would it be correct to say that the creation of the
>current Technician license DID have an effect, and DID
>bring more people into the fold, in a burst that started
>ten or so years ago?

The number of US hams grew all through the 1970s and 1980s, when all US ham licenses required a code test. The growth continued after the Tech lost its code test in 1991. W1RFI posted numbers that show the growth increased after 1991, but has slowed somewhat in recent years. We can play number games all day, but doing so does not put even one more amateur signal on the air.

[[I am truly trying to understand what is going on, and what has gone on, vis-�-vis licensing and the resultant numbers of hams, etc. I think it's important to use numbers to try and understand what is and is not happening in amateur radio, and what polices may or may not be successful. I believe that this understanding depends on accurate numbers and if it's a game, it's a serious one!]]

Surges are to be expected - when the "price" of something drops,
There is usually a surge of "sales".

[[Unless no one is buying, at all, which seems to be happening vis-�-vis the change in the code test. That is, even 5 wpm has had little or no effect on recruitment of totally new people to HF, or so it seems. Thus, apparently, the shift to NO code testing at all?]]

>Then, as the 1990s went on, some of those folks DID qualify
>with code at the first level, and it was these same folks,
>and mostly them alone, who came onto HF in a big way HF
>after April, 2000, restructuring. That is, there was no
>real influx of NEW people onto the HF bands, OR into
>amateur radio, when the code requirement was dropped to
>5 wpm for ALL license classes. Would that be right?

It sure seems that way. The main effect of the restructuring was lots of upgrades, not lots of new hams. IMO the problem is NOT the tests - it's lack of publicity.

[[Here's the crux of the whole thing, for today's policy makers, in my view. That is, they seemed to be overwhelmingly worried about QUANTITY and not QUALITY, and there must be a reason for that. But IS there a huge problem with quantity and is the problem severe enough to justify the angst that has been created by all of these changes? On the one hand, the ability and desire to pass ANY test these days says volumes for a new recruit. On the other hand, the system for giving those tests has radically changed over the last two decades, to make everything more "accessible." It's sometimes hard for me to see the reason for the current shuffling and re-shuffling when there are, what, 650,000 hams? Why the apparent panic? Is it all about HF?]]

>. . . there never has been a legal REQUIREMENT to
>USE CW on the air, am I right?

Not since about 50 years ago. There was once a requirement
that hams certify a certain amount of on-air USE of CW/Morse
(so many hours in a certain number of months preceding the
renewal application) in order to renew their licenses.

[[Now THAT is fascinating. I guess the problem was it led to a lot of cooked books since, er, ah, how could that be enforced?]]

This was changed about 50 years ago to a requirement to operate
using any mode, then dropped entirely.

[[Also fascinating, in that for some time there was in effect a requirement to BE ACTIVE to keep the license! And wasn't renewal a 5-year affair then?]]

For at least 35+ years there has been NO requirement for any ham
to use any mode, or to operate at all. Neither has there ever been
a requirement to USE any of the theory stuff, either. The old
Novice license went through a period (1967-1978?) when it conveyed
only CW/Morse privileges.

[[What an impossibility it would be these days to certify 50,000 or 60,000 people a year for renewal, under a "must operate" rule!]]

>However, was it not a fact that if one took the trouble to learn
>code at 13 wpm, or some higher level, then it occurred to at least
>SOME people that it sure would be silly NOT to use it, since it
>worked so well for some things? Would that be a fair statement?

Sure. Just like if you require all drivers to use a stick shift
For their driving test, some will like it and buy stick shift
cars instead of automatics.

>That is, [the above] is the argument I think I am seeing from
>some code supporters. Does this idea hold any water?

Of course. In fact, that's kind of what happened to me. My first
interest in ham radio came from hearing hams on 75 meter AM.
I wanted to join them, and set out to get a license. Along the way
I discovered that CW was fun once I had decent skills at it. Thus

It became my primary mode. Would I have learned CW/Morse and used
it without the license requirement? I really don't know.

[[Here is another critical issue, what will happen to CW usage once testing disappears? The ARRL position seems similar to the old Bush Administration's "Thousand Points of Light" escape hatch, one stating that volunteerism will make up for a lack of involvement by any "higher authority." But this is, I think, a very cheesy position to take, VERY, and quite reminds me of an old movie in which a loving relative, pushing a wheelchair-bound uncle down a boardwalk, speaks for several minutes in cooing terms . . . then pushes the crippled oldster into the ocean. That is, what is ARRL going to do vis-�-vis CW besides wishing it well . . . all the way to the water? That is, I think CW is part of the historical legacy of amateur radio and is now UNIQUE to amateur radio, and so is worth protecting and encouraging, at the highest level.]]

All I can say is that at least some anti-code-test folks are also
against expanding the 'phone sub-bands because doing so will
effectively reduce the spectrum available for DIGITAL modes.

[[The enemy of my enemy is my friend, to the end of boardwalk! That is,
this "support" for CW operating might keep it Grand-fathered in, at least as
far as the next convenient scenic overlook. And after that . . . splash!?]]

Some folks say there should be no mode restrictions on amateur
HF, and that such restrictions constitute a form of "welfare"
for "narrow" modes, like CW. But without mode restrictions,
what is to prevent hams from using, say, the same FM voice
standards as on VHF/UHF?

[[I think you've hit on the whole idea! Just think of the hardware that
would have to be sold if "talk wars" broke out on HF, as broke out on CB
here in Columbia in the late 1970s! Where would the WORLD hide from the U.S.
generated noise!]]

On amateur VHF/UHF there are almost no mode restrictions.
(Yes, I recall 50.0-50.1 and 144.0-144.1). On 2 meters
this has resulted in most of the band being taken up by
FM voice repeaters, leaving less space for new modes to
operate. Without any mode restrictions on HF, it is
reasonable to assume something similar would take place.

[[And may be the secret agenda of some, eh? That is, who would get to sell
all the equipment? Who would get to "coordinate" the bands?]]

>Is everyone going to just be friends now?

All depends on how people behave. Look at how some people post
here - I see a variety of behaviors, ranging from very friendly
to very unfriendly.

[[Gresham's Law seems to operate with extreme effect on UseNet: The Bad
Drives Out the Good. Open up HF to "let the best mode win" and . . .

chaos?]]

-- As for the future of the band plans and CW:

>That depends entirely on USE of the mode. Many of us who
>actually USE CW/Morse will continue to do so and encourage
>others to do the same.

No doubt, and that's good! Let the best mode win?

I'm 47, so I expect it to be more like 40-50 years at least
[before any serious band plan change.]

[[Maybe. But I think the pressure will start in very soon to do something
about "band welfare." I hope I'm wrong.]]

>That's a fair-sized market, I think! That's half a billion
>dollars! [for Ham Radio equipment, per year.]

Compared to what? How much was the market for, say, FRS/GMRS
Radios last year? Or VCRs?

[[Half a billion dollars is half a billion dollars is half a billion dollars
is half a billion dollars!]]

And I would say that my guess was about as high as it gets.
I don't think most US hams spend as much as $1000 total on
equipment every year.

[[One wonders what the REAL number is, total, and whether that number is
going up or down or maintaining. Here is a real hidden factor in all the
regulatory changes, in my view. That is, the fact that it's simply not
spoken of with reference to rule making . . . speaks volumes, to me.]]

>And looking at QST and its advertising, the ratio between HF
>and VHF related ads is at least FOUR-TO-ONE, in full-page
>ads, and higher than that in smaller ones. That is, if there
>IS any real money in amateur radio, it does seem to be in HF.
>Is that a fair statement?

Nope. Ads simply reflect what the manufacturers are trying to
sell, not what they are actually selling. I can name all sorts
of examples down through the years where highly advertised items
did not sell in large quantities, but rigs that were almost
unadvertised sold like hotcakes.

[[Off the point, I think. For years and years this ratio has been
maintained, guaranteeing (for me) that HF is where the money is, especially
for the few U.S. makers still in the game. I think it is THEY who have the
ear of Foggy Bottom, such as it is, every bit as much as any other ARS
faction. These economic factors cut across all boundaries and borders and
to me explain the fact that the Europeans are bailing on code as well. It's
the dollar value of the market, and it's future, that is in play here, in my
view. NCI simply provided a convenient stalking dog here in the U.S., and

as someone said, if they did not come into existence naturally, well, they were invented, for the very purpose!]]

>That is VERY interesting, [the NON-flood of new HF hams]
>and could well explain the rush to now do away completely
>with code testing, in hopes of finally having the desired
>effect.

Yup. And that effect will probably not happen. Sure, there will be a short-term surge of new licenses, and a surge of upgrades - but only a short-term surge. Just my opinion, but recent history has shown that to be the case.

[[And thus more "panic," or rather, changes. Where will it all stop, with what amounts to a "CB Service"? That is, if the slide continues, the pressure will be on for more "accessibility," won't it? So often in human affairs the actions of the gatekeepers are: See the cliff, run TOWARD it, and FASTER!]]

>And if this does not work, will
>elimination of the written exams follow?

Nope. But they may be reduced still further.

[[Yes, you can see this coming, too. And how far can it go?]]

. . . let me offer you a suggestion and a challenge: Learn the code, sending and receiving, and let us know your progress. Tell us the methods you use and how long it takes you to go from "this is a dit" to, say, 15-20 wpm. If you need any help, just holler. My email address is for-real.

[[I'll let you know! The plan now is to take the elements for General in about three weeks . . . and pass them. Eeek!]]

Do not be misled by the naysayers and negativism sometimes seen here. There are lots of nice folks on the air using CW/Morse. Join us!

[[I intend to! No doubt the great majority of the people on this board, and in amateur radio in general, are pretty much "OK" in person, in most social situations. That seems obvious. But I have real problem with folks who deliberately, and over a long period of time, post troll after troll after troll. I don't think I want to know those people, at all! UseNet gives an isolation and immunity that can reveal, quickly, things about a person you might NEVER find out in even a fairly close friendship situation. I guess we have to, to a certain extent, take the good with the bad. The net can put a pretty serious edge on things, but it can lead to plain speaking that is valuable, too.]]

(I prefer 40 meters, around 7030-7045 kHz).

[[OK!]]

Listen to, say, 40 or 20 meters CW during a contest like
the CW SS, DX test or Field Day. All that activity is
generated by a few thousand stations - probably more like
a few hundred on any given band at any given time. The bands
can be that busy all the time if we USE them.

[[This leads to another serious question: Of the 600,000 plus licensees in
the ARS, how many are ACTIVE on the various sections of the spectrum? I saw
a message on the "DX" board that something on the order of 35,000 operators
were truly active on HF. I wonder if that's close?]]

That's an admission that your observation was out of control.
Tell us something that we didn't already know.

Please explain in detail how Shannon's Theorem doesn't fit reality.
You will become world famous if you are correct.

The fact is that Shannon was right on. The reason that you could read
CW and your computer couldn't read PSK31 is that PSK31 operates much
closer to Shannon's limit than does CW. So your observation matches
Shannon's Theorum exactly. Sorry you are so confused about what happened.

Ah, victims. Sorry OB, I had no idea. I gleaned from all your postings
that you were a person of superlative, even supernatural, talents, and
never a hint of 'handicap'. But I suppose one who has to suffer being
"inferior" just because they lack the ability to discipline themselves
to do something like learning or developing decent skills at some
mundane activity like Morse code could, indeed, consider themselves as
handicapped. I truly am apologetic. I had no idea. And all this does
help to understand your attitudes and to decipher your
postings/rantings.

> of amateur radio and is now UNIQUE to amateur radio, and so is worth
> protecting and encouraging, at the highest level.]]

It is not the purpose of government to preserve a historical
legacy. That falls upon the individual members of the ARS like
you and me.

And thus, safety.

I can accept a limited frequency gain for
> the expert over the intermediate to be an incentive...but
> only a small amount. Current additional frequency privileges
> between Advanced and Extra would do it.

Bill, I respect your opinion, but disagree. A license with little slivers within the same band is unnecessary. The knowledge to operate safely at one frequency is the very same as the knowledge necessary to operate 1kHz lower, as long as its within the amateur band. A power or mode license would make more sense - to me.

The reality of
> frequency privileges is that they just do NOT tie back

I accept a limited license based on safety, and possibly tenure.

You're such a jerk to everyone. It gets you upset and thats enough reason.
Live with it, just as we've lived with unnecessary and irrelevant
requirements for years.

> ANYONE who can (and
> is willing to) pass the required tests can qualify for any ham radio
> license of any level.

And anyone who wants to can stop reading Cecil's posts and getting all upset
over them. Just as we choose not to jump through unnecesary government
hoops or use our Right to Petition to change bad things.

> You are just intellectually dishonest, and you damn well know it.

If the government told me to line up a bunch of non-combatant Somalis and
shoot them so that they all fall into a bulldozed trench, I would not. And
I've been to Somalia and have no love for the place or people.

Yet, some people will do anything their government demands of them. Is
there anything at all, anything, that the American government has asked you
to do and you told them to go soak their heads?

OK, here's a practical test that can be used to divide the service.

Two kinds of licenses.

a. Radios with antennas attached to the shell of the radio (no transmission
line). Ex., HTX202, FT817, etc.
b. Radios that use transmission lines.

The exam: Climb a 200' tower, drag a tribander up, and mount it on the
mast, and tune it on 20/15/10 with SWR no greater than 1.5:1 on any band.

The above is as bad as anythign we currently have.

>>
>>you tellum, mistah radio expert!
>
> I'd ask you to explain what part of that paragraph was not true, but since
>you and I already know that it IS true, I'll save you the embarrasment.

On-off keying was simply the only way that early radio could
be used as a communications medium. Beyond that, OOK CW
is just slow, inefficient, and prone to errors due to entirely-human
decoding.

>>yah, that's why all the other radio services dropped it or never
>>considered it in the first place.
>
> Money...they save millions in "human resource" funds by not hiring Morse
>operators.

No. OOK CW methods are just slow and inefficient as a means
of communications. Despite all the braggadoccio of perfection in
something, humans are still prone to errors.

It is a stupid and senseless argument to argue that voice modes
in public safety radio services are "lesser" than OOK CW on some
basis of money and "human resources" when it comes to either
protection from harm or safety of life.

It is a stupid and senseless argument to argue that teleprinters
with their higher-speed, continuous operation are "lesser" than
manual telegraphy.

> My earlier premise that Morse is a dependable mode is not in contention
by
>ANYONE who has employed it. It's simply an "expensive" mode in terms of
>keeping operators on staff.

That is not a premise but a rationalization. A rather poor one.

That is simply a form of bragging by touting that a skilled manual
telegrapher should still be employed as a telegrapher because
they are so good at it. Closed-circle argument that gets nowhere
but is totally emotionally-satisfying for the telegrapher.

The above is extended to insist that morse code testing must be kept because all the long-time radio amateurs passed such a test and became proficient at it. Again, that is a closed-circle argument that is only emotionally satisfying to those who claim such things.

The constant counter-claim of "one cannot 'know' something without experiencing it (or be qualified by license, testing, participation)" is false by the nature of radio entire. "Radio" is a means of communication by propagation of modulated electromagnetic waves. There are many, many different radio services in the world. All but maritime and amateur radio in the USA have dropped morse code cognition capability as a prime requisite qualification for a radio operator license. Maritime radio services are now using voice and data modes as primary radio communications methods.

All radio, no exceptions, utilize the same radio physics in operation and propagation. The electronics technology used in all radio is the same. There is no real distinction in methods or "qualifications" of radio except those imposed by humans for the purposes of regulation of various radio services. Those are an artificiality about radio physics and do not apply to electrons or EM waves.

US amateur radio is one of the most open and publicized of hobbies. There is nothing hidden or secret about it and the US radio regulations forbid such use "for the purposes of obscuring communications content." The continued comment that "no one can possibly 'know' anything about amateur radio without having 'practical experience' in it" is a ridiculous fabrication.

> And in ANY case, ENGLISH is the international radiocommunication
>language...So now are you going to rant and rave against IT'S use, too?

The only language specifically cited for standardized worldwide radio communications is English for International Civil Aviation traffic control purposes. That was adopted in 1955 by the International Civil Aviation Organization (ICAO), a United Nations organization. The common ICAO communications language does not apply for any other radio service uses.

Other languages in common radio use are Spanish, English, French, German, Japanese, Chinese (perhaps two dialects), Russian, Arabic (several distinct languages under that broad category including Farsi), Portuguese, Malay, Tagalog, Indian, Dutch, several from Southeast Asian Pacific region.

>>in order to use international morse code anywhere by a native
>>of a non-alphabetic language requires that they also learn a
>>totally different written language.
>

> More evidence of lack of experience.

No, realistic. "English as a common language" is a near-sighted, bigoted myth promoted by ignorant, bigoted Americans. The ICAO decision of 1955 was based on civil aviation that had survived World War 2 and able to resume operation with faster-moving aircraft, the most aircraft, and its pilots' native language. That standardization came about as a result of warfare survival and as a practicality in entering the "jet age."

That "everyone uses English" to communicate in any medium is again a myth. That Americans use Extended ASCII in computer-modem communications (ASCII = American Standard Code for Information Interchange) can lead to that mythical assumption. IBM was under no such myth when it modified ASCII to include all the other alphabetic-based language alternates now found as switchable alternates in "code pages" of Operating Systems.

If anything can be said to be "common" in any communications, it is numerals. The common numerals now in use worldwide are of Arabic origin.

Alphabet-based languages are in the minority in this world. Syllabic-based languages are in the majority. That is reality. Reality is often uncomfortable, but it is still reality.

Try Jeffrey Herman, formerly of the USCG, at least three former
participants in here who were taught in the USN (names and
callsigns forgetten but remarks' styles unforgettable), perhaps
Jim Kehler, Jim Hampton (? who reads this newsgroup),
and approximately nine others who jumped in here over the past
five years and then left when they were not universally loved.

It might also include Hans Brakob but his past is a bit confused
since he has claimed (in private) a "college degree" either before
or during his USN active duty...but never achieved a commission
possible with such a degree, just a Master Chief Petty Officer
rating.

With all kind regards to mister chief...

Er, the Tacoma Narrows Bridge is definitely up and staying up. Lots
(perhaps too many) motor vehicles use it daily, 24/7. The problem
there has always been the roadways at both ends of the Narrows,
now being corrected with much new road construction. :-)

There's always that gray area of the "professional radio amateur"
who works in organizations and publishing houses, using his/her
license as a qualification for that job. :-)

Yep, Christmas Island on 10M SSB. It's a wonder we ever got to the beer!!!

I think the other guys commenting were worried what we were going to do with the dykes. Well, we didn't berate them and try to make them do anything they didn't want to do or were incapable of doing. We found a pair of side-cutters and everything was fine.

Brian

I beg your pardon ... I have logs with hundreds of CW QSOs,
including things like Johnston Island and So Africa from So Cal
on 40 CW with 3W from a HW-7 ... the fact that I don't enjoy
and prefer not to use CW any more does not implicitly mean
that I an "inexperienced" (I may be "out of practice" ... quite
deliberately ... but I wouldn't say I was "inexperienced.")

> I believe that the SSB op who is doing the same is a good operator.
>
> Why do you feel that SSB is a "wrong" mode?

I think he was asking if you were implying that SSB was the "wrong"
mode by only mentioning "the Morse guys ... digging them out of the
mud" ... I knew what you meant, but I figured someone would call
you on it ... perhaps overly sensitive, but after years of oppression,
what can you expect? :-)

My apologies, Cecil. :-)

Having driven over it enough times...and endured the parking wait
in the construction areas on the Tacoma side...many many many
drivers "turned to spaghetti" waiting for the gridlock to pass. :-)

My apologies again for inserting a non-ham-radio topic in here.
Das ist verboten according to the Rules of Engagement. :-)

Try this on for size. This proposal allows for a "new guy" license,
and a "regular" license.
Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of) WT Docket No. 98-143
) 1998 Biennial Regulatory Review
) RM-9148
Amendment of Part) RM-9150
97 of the) RM-9196
Commission's)
Amateur Service)
Rules.)

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments contain proposals on reducing the number of amateur radio
operator license classes, and suggestions regarding Morse testing.

I. Discussion:

The NPRM proposes reducing the number of operator classes from six to four. This reduction would be accomplished by phasing out Novice and Technician Plus classes, leaving the remaining four classes in place. It is worthy of note that this plan would preserve the heart of the so-called "incentive licensing" plan which was implemented in 1968.

I believe that the effects originally expected of the incentive licensing scheme have not been realized in practice. There is little evidence that this scheme, now 30 years old, has produced any notable increase in the skills, operating excellence, advanced electronic techniques, or other tangible valuable difference between the operators in the various "non-entry-level" classes of licensee.

As a non-scientific but pragmatic experiment, tune a receiver to 14.350MHz. Close your eyes and slowly tune the receiver down across the 20M amateur radio band. Try to detect the "class boundaries" based on a difference in signal quality, better operating practices, or more advanced technical conversations. I think you will find no detectable difference as you transit across the frequencies which mark the boundary between General, Advanced, and Amateur Extra sub-bands. Thus it can be assumed that the expectations of the incentive

licensing program (greater levels of technical and operating skill at higher license classes) have not been realized, and the incentive licensing plan can be safely abandoned as providing no significant benefit to the public interest, necessity, or convenience (PICON).

II Proposal:

A. License Classes:

If the interest of the FCC is (as stated in the NPRM) streamlining of the licensing structure, then I propose that the license classes be reduced to two classes, namely "Basic" and "Advanced".

The "Basic" license would have an entry-level test (basic regulations, safety, operating procedures, basic DC and AC electronics). Without CW endorsement this class would have full frequency and mode privileges above 30MHz, power limited to 50W output.

The "Standard" license test would be of a difficulty level similar to the current Advanced class test, and would have full privileges above 30MHz at power levels up to 1500W.

B. Morse required for operation below 30MHz

Either license class could gain access to all MF/HF amateur radio frequency allocations (at 50W and 1500W respectively) upon passing a Morse test of 5WPM and gaining a "CW endorsement" for their operator license.

The Morse test should be "fill in the blank" or "1 minute of solid copy". Multiple-choice test formats should not be allowed.

C. Status of current licensees.

Current licensees should be redistributed as follows:

Current class	Converts to
Novice:	Basic CW Endorsed
Technician:	Basic
Technician+:	Basic CW Endorsed (Note 1)
General:	Advanced CW Endorsed
Advanced:	Advanced CW Endorsed (Note 2)
Extra:	Advanced CW Endorsed (Note 2)

Notes:
1) "Old" Technicians (who took same written test as General and 5WPM) would be "Standard" CW endorsed.

2) Current Advanced and Extra licensees could continue to have that class printed on their license in recognition of their previous status.

Respectfully submitted,

H. Hans Brakob, K0HB

Again, "The above is as bad as anythign we currently have." i.e., big joke.
Get it?

Again, only one license is necessary.

"Asswipes?" Do you use that kind of language on the air?

Or do you have a dual personality?

Larry Roll/K3LT thinks its OK to say the most revolting things on RRAP, but somehow becomes civil when he clicks on the radio. I don't know how he does it. I honestly doubt he does.

So do you use the word "asswipes" on the air, or rather, will you when your license comes in? Perhaps we should get your neighbor to weigh-in on the use of "asswipes?"

Yet Cecil "rarely or never" adds anything and you can't wait to open his
posts, they infuriate you so much. So you can say all you want about me,
but you will secretly read each and every post I make. You can't help
yourself.

Hey "asswipe," err I meant Len.

I wonder what cussword he has for me? Or maybe its his CW neighbor that
comes up with the nomenclature.

Anyway, I spent a few minutes explaining my concerns and rejection of the
code exams and inventive licensing, now he says he isn't going to read it.
What a party pooper. Welp, the next newbie PCTA without a clue comes on
here and I won't bother.

If he's been reading since '98... Never mind.

Brian, awaiting cussword assignment.

Yes, very unnatural strong feelings about him. We had a character on here a few years ago who had some kind of bi-sexual thing going. You know who wouldn't stay off this guy's butt. It really got sick. But Val knows all that since he's been reading since '98.

> Shannon.

So if you have crappy equipment, using outdated techniques that
can't begin to get close to the Shannon limit, and refuse to adopt
better techniques that can, that somehow makes Shannon "irrelevant"
as you've put it? I don't think so ...

> If the lesseer mode works under the instant circumstances using
> the system that is availabe and the more efficient does not, only a fool
> would attempt to force a comparison based on a Shannon analysis.

You're mixing situations here ... first, the lesser system (that would
be Morse) is available (and therefore works) ... in the next breath,
the more efficient system (virtually anything but Morse, under equal
conditions of power, bandwidth, and throughput) is (apparently) not
available (poor planning) and therefore "does not work."

> That is exactly what happened on the morning noted, where I
> could easily copy the CW ID on the PSK31 stations but not the
> PSK31 signal itself.

As I recall this from a couple or three years ago, you were just
in the process of figuring out how to hook your computer up

to your radio and get PSK-31 running ... based on your general demonstrated level of (mis)understanding of anything more technically advanced than OOK Morse, I find it highly probable that you didn't have things set up correctly in terms of levels, etc. and weren't getting optimum copy on the PSK-31 ... don't blame operator ineptness on Shannon ...

> None of this in any way changes anything Shannon said. It merely
> points, again, to "In theory, theory and practice are the same, but in
> practice they are often different".

That's a bunch of baloney, Dick ... any disagreement you may note between theory and practice is rooted in your inability to understand how to correctly apply the theory ... you seem to view theory as an alternative definition akin to "hypothesis" or "idea" ... theory as we technical folks use the term means "law" as in "laws of physics" ... if applied correctly by competent practitioners, theory and practice will agree so closely that you won't be able to tell the difference ...

What I would expect is some graciousness - and here I am posting in this group!! ;^) I don't begrudge the old timers what they had to do to get their licenses. In fact, I love talking to them about the experiences they have had and to pick their minds for knowledge that their experience has given them.

But the times have changed. I think it would display more grace and character for the disgruntled ones to do more constructive things like get more people involved in using the CW they have learned, promoting it as fun (remember, this is a hobby) touting its benefits - I bet you could get some people interested just by talking about some qrp CW on mountaintops with that nifty little Yaesu rig running on batteries and an minimal antenna. In fact, it would be a great thing to set up a sked with new Generals in the area.

THAT is my idea on how to promote CW.

Or of course, they can call people like me an extra-lite. They can make fun of the no-code Techs too.

I have a pretty good idea which tactic is actually better for the ARS though.

What, other than your desired answer, do you base that,
Larry?

For example, only about 48% of NCI's members are not
coded hams ... slightly over 52% of NCI's members ARE
coded hams ... including a lot of advanceds and extras.

> >Here is the point at least learning the code takes a sort of discipline
and
> >an effort to show you are serious or dedicated to amatuer radio, if not I

> >afriad it will turn into 11 meter free for all.

That bogus argument has been raised for years ... and it didn't
happen with the no-code tech back in the early 90's and it hasn't
happened with the drop to 5 wpm for HF access ... the "spectre
of CB" is nothing more than a scare tactic perpetuated by the
PCTA and code elitists like Larry.

> There is plenty of evidence that the HF phone sub-bands have been
> that way for years. IMHO, there is not practical need to add to the
> existing chaos by further reducing licensing standards, particularly
> with regard to code testing -- but that's the way we're going, like it
> or not.

Larry .. check the FCC statistics on who the offenders have been.
Far and away, 20wpm extras were the sociopaths that were getting
busted ... proving that, as the FCC said on the record, "A Morse
test proves one's ability to copy Morse, nothing more, nothing less."
The Morse myth that passing a Morse test ensures that one will be
a better operator is BS.

> >You want to remove the code
> >and what leave the question pool as it is ?

>
> Not me. The only thing that would be acceptable to me would be to
> return to the Pre-Restructuring licensing standards.

Well, Larry, please don't hold your breath (maybe I shouldn't say
that :-) Since the FCC soundly rejected all of the Petitions for
Reconsideration of WT 98-143 "the fat lady has sung" ... live
with it, stop bitching and whining ... and for God's sake, please
stop demeaning every new ham just because they didn't have
to go through the ordeal of your #$#&*^ beloved Morse hazing
ritual.

Even less, indicating that most hams don't care if the code
test goes away or not ... or, alternatively, that many are too
lazy to "vote." (I'm inclined to give certain credence to the
2nd explaination, considering voter turnout at real elections.)

Purdue NESEP did not teach Morse code, and graduates were
not required to accept commissions. Most E8 and E9 participants
declined O2 status and the hazing being a of mustang junior officer.

Sorry if that offends the ex-RA enlisted grades.

With all kind wishes,

First, I'm SO glad to see that this "K0HB's Modest
Trickle" business is not prostate related :-) There's
enough of that sort of discussion on the bands
and I'd hate to see it take over here ...

> this effect. Is this view widely held?

NO ... otherwise there wouldn't be groups like
NCI around the world, working to eliminate the
unnecessary Morse barrier.

> That is, the general impression I have received,
> which could certainly be in error, is that code
> testing has created a great pent-up mass of
> VHF-only operators, and others, who are at
> the ready to instantly leap onto HF if only the
> "hazing ritual" be done away with.

There are a few no-code techs ... relatively
few ... who only aspire to local 2m communications.
However, most of the techs I've met, talked with
at ham events, etc. are interested in HF, but either
can't or won't jump through the hoop that the Morse
test represents. For some it's a matter of ability,
due to certain handicaps ... for others it's a matter
that they're so disinterested in Morse that they will
wait for the requirement to disappear, and for others,
it's just a matter of principle ... they COULD do the
5 wpm, but they WON'T just on the principle of the
thing.

> But can it be true that there is NO "pent-up mass"

Hans has a right to his silly opinions :-) With at least
a couple of hundred thousand no-code techs, do you
REALLY believe that only a few are interested in HF?

> This seems like a substandard way to make policy,
> at least to me. Where have I gone wrong?
>
> Secondly, who in fact has been the driving force behind
> the whole NCI business if not those who either were

> then I have to confess my amazement. What's it all
> REALLY been about if "everyone who wants to be on
> HF is already there?

The driving force behind NCI has been the members,
about 48% uncoded and about 52% coded, and the
Board of Directors who do the day to day work.

> So, what HAS it all been about, if KOHB is right?

Hans is not right ... he's either just pulling chains (which
he has a propensity to do, just to see what sort of a
reaction he can get), or he's got a really silly idea on this
one. All of the evidence is against his view, so I think he's
chain-pulling again ...

Carl, I'm ashamed of you. You may feel my opinion is mistaken,
but it is an honest opinion. To dismiss it as silliness or
"chain-pulling", thus avoiding reasoned discussion is cowardly.

I would love to see a step increase (10-15%) in HF amateurs
on the air whenever the Morse test is not longer a qualifier for
HF access, but I have no confidence that such an increase
will materialize. Given the modest migration from Novice/Tech
Plus to General/Extra when 5WPM became the standard for
HF license qualification suggests to me that there is little or
no 'pent up demand' waiting for the elimination of this qualification
requirement.

I'd be delighted to be mistaken.

With all kind wishes,

de Hans, K0HB

Hans, I knew that in time I'd come around to your way of thinking.

Lose the "Advanced" name, it reminds me of incentive licensing for some reason.

CW endorsements can go away too.

Commission's)
Amateur Service)
Rules.)

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments contain proposals on reducing the number of amateur radio
operator license classes, and suggestions regarding Morse testing.

I. Discussion:

The NPRM proposes reducing the number of operator classes from six to four. This reduction would be accomplished by phasing out Novice and Technician Plus classes, leaving the remaining four classes in place. It is worthy of note that this plan would preserve the heart of the so-called "incentive licensing" plan which was implemented in 1968.

I believe that the effects originally expected of the incentive licensing scheme have not been realized in practice. There is little evidence that this scheme, now 30 years old, has produced any notable increase in the skills, operating excellence, advanced electronic

techniques, or other tangible valuable difference between the operators in the various "non-entry-level" classes of licensee.

As a non-scientific but pragmatic experiment, tune a receiver to 14.350MHz. Close your eyes and slowly tune the receiver down across the 20M amateur radio band. Try to detect the "class boundaries" based on a difference in signal quality, better operating practices, or more advanced technical conversations. I think you will find no detectable difference as you transit across the frequencies which mark the boundary between General, Advanced, and Amateur Extra sub-bands. Thus it can be assumed that the expectations of the incentive licensing program (greater levels of technical and operating skill at higher license classes) have not been realized, and the incentive licensing plan can be safely abandoned as providing no significant benefit to the public interest, necessity, or convenience (PICON).

II Proposal:

A. License Classes:

If the interest of the FCC is (as stated in the NPRM) streamlining of the licensing structure, then I propose that the license classes be reduced to two classes, namely "Basic" and "Advanced".

The "Basic" license would have an entry-level test (basic regulations, safety, operating procedures, basic DC and AC electronics). Without CW endorsement this class would have full frequency and mode privileges above 30MHz, power limited to 50W output.

The "Standard" license test would be of a difficulty level similar to the current Advanced class test, and would have full privileges above 30MHz at power levels up to 1500W.

B. Morse required for operation below 30MHz

Either license class could gain access to all MF/HF amateur radio frequency allocations (at 50W and 1500W respectively) upon passing a Morse test of 5WPM and gaining a "CW endorsement" for their operator license.

The Morse test should be "fill in the blank" or "1 minute of solid copy". Multiple-choice test formats should not be allowed.

C. Status of current licensees.

Current licensees should be redistributed as follows:

Current class	Converts to
Novice:	Basic CW Endorsed
Technician:	Basic
Technician+:	Basic CW Endorsed (Note 1)
General:	Advanced CW Endorsed
Advanced:	Advanced CW Endorsed (Note 2)
Extra:	Advanced CW Endorsed (Note 2)

Notes:
1) "Old" Technicians (who took same written test as General and 5WPM) would be "Standard" CW endorsed.

2) Current Advanced and Extra licensees could continue to have that class printed on their license in recognition of their previous status.

Respectfully submitted,

H. Hans Brakob, K0HB

Well, I care about my hobby, Bruce. And I should have said,
"The Amateur's Code". Do you think The Amateur's Code is
outdated? Do you think we should now be inconsiderate,
disloyal, unprogressive, unfriendly, unbalanced, and
unpatriotic?

If there is no measurable difference in segregating amateurs, then there is
no purpose in it.

I've never been challenged, Mike, unless you consider "Go soak your head!" to be a challenge. In high school basketball, I would coast through three quarters while keeping the score relatively close. Then when everyone else was tired, I would explode in the fourth quarter. The coach called it my second wind. I never told him it was my first.

If I were going to compare modes, I would normalize the throughput, the
power, and the bandwidth. That means gathering data and processing it
in a rational technical manner, something to which you seem to be allergic.

Assuming your CW and PSK31 used the same power, CW should have about
a 5:1 advantage over PSK31 based on Shannon's Theorem. So where's
the crack?

That's the point...the lesson to be learned...the
post event review to see how to do it better
in the future.

> > And, in the end....nothing said here indicates any "crack" or
> > hole in Shannon's law.
> >
> Un-huh. And what I said is "Could there be a crack in Shannon's
> theory" relating to real world communications?

Well... do tell us all. Is it or is it not your contention
that there's soimething amiss with Shannon's law based on your
personal experience?

> When the most efficient
> mode fails and the least efficient works, something smells, and all the
> explaining and rationalization you can do won't alter the facts.

Your words here tell anyone with even the slightest familiarity
with labratory and/or testing that you don't have a clue what
you are talking about. You are, as Cecil has pointed out, NOT
comparing the same conditions.

> We know
> what Shannon found. We also know that it has meaning in design and
> explanation of systems, and indeed does explain why I saw what I did
> that morning.

So I ask again... Is it or is it not your contention
that there's soimething amiss with Shannon's law based on your
personal experience?

> But it didn't do a thing toward solving the instant
> communications problem, which you and Cecil have a real problem
> understanding for some reason.

Shannon's law is not intended to do anything for you. It
explains limits. Your post event comparison lacks
the qualitative statements as to the different variables being
compared.

Cheers,
Bill K2UNK

I expect civility from any ham, regardless of license class. If they've got
a problem with how the FCC runs this service, they can take it up with them.

> They played the FCC game
> by the rules and climbed the tree fair and square, most of
> them, and then saw the whole thing trivialized, first by the

Does every driver out there who had to drive a stick or parallel park feel
SCREWED and take it out on the new drivers?

I'll bet that no ONE cares. I'll bet not ONE gives it any thought.

Now if the DMV made me do something arbitrary, stupid, and/or irrelevant in
order to get my license...

I'd petition my government to change it instead of insisting that all future
generations must also do something arbitrary, stupid, and/or irrelevant.

> It does not matter
> whether these changes are "better" or "worse" for Ham

After lurking since '98 you come on here asking questions as if you're a newbie, but you had all the answers in your hip pocket. You were simply setting the stage for being "outraged" then call someone an asswipe and stomp away pouting. Typical lib tactic.

By the way, there's no callsign for you at QRZ.

Brian

Bruse said, "No, I mean lossers like you who couldnt obtain a License, until
the standards
were lowered."

Yet Kim has had her license longer than Val, who says he's still waiting on
his. But Kim is the "losser."

Your double standard is just as wide as Val's.

If he got his check yesterday he'd have more than a six pack. And I'd hate to put down CBers so severely as lumping him in with them.

But he did come on here and ask, "If a CBer marries a Tech, is she still his sister?" And upon looking up his last name in QRZ there was a female with a Tech license... So I just assumed that he was the CBer.

Hopefully the structure would appeal to new folks
and the "Advanced" label would strike a chord with
existing licensees, thus tempering opposition. Also,
Canada has already set the "Basic - Advanced" precedent
in their two-category system, so there's a sense of uniformity
in the choice.

If you are 'put off' by a license label, then I guess
I have to believe you aren't really interested in
progress, but only picking at details for the sake
of picking at details.

>
> Get an exemption like Japan.
>

Japan doesn't have an exemption. Their full
priv HF people take Morse tests. They limit
their 'no-code HF' people to 10W and just
a couple of bands, then tell ITU that these
restrictions are intended to contain the
operations within JA.

With all kind wishes,

I consider myself a coded ham but I know a lot of nocode
techs who are having fun in the hobby. The point is that
all active hams, coded or not, gain pleasure from the hobby.
Otherwise, they wouldn't have chosen to be hams.

>the history correctly (Jim N2EY can clarify).
>
Here's what really happened:

Before 1951, the "incentive system" was based on modes. If you wanted to use 'phone on the ham bands between 3 and 25 MHz you needed a Class A. All other privs were granted to Class B and C hams. (B was FCC test and C was by mail). Getting a Class A required a year's experience as a Class B or C and another written test. Class C hams had to retake the Class B exams, too.

The 1951 restructuring gave us the new Novice, Tech and Extra, and renamed the old ABC licenses as Advanced, General and Conditional. The incentive system was expanded by this restructuring. FCC put some real teeth into the full privs requirements by closing the Advanced at the end of 1952.

But for some reason FCC changed its collective mind at the last minute and instead of increasing the requirements for full privs they simply gave all privs to all hams except Novices and Techs. This was done despite the fact that the 1951 restructuring had been worked out in detail over a period of years.

In 1958 the FCC started asking for ideas on how to get hams to go for the Extra. They got serious about the changes in 1963, when the FCC asked for restructuring ideas (and got a whole pile of them). The final result, after many proposals and counter proposals, went into effect in three stages starting in 1967.

Note that:

- there has been some sort of incentive system since at least the end of WW2 (57 years)
- the period of all privs to all classes except Novice and Tech lasted less

than 17 years (Feb 1953 to Nov 1968)
- the FCC currently thinks that three levels of incentive is right for the ARS.
- the FCC, not hams, instigated both the 1952 "Christmas present" and the
late-'60s "incentive licensing" changes.

>It is understandable to do that for a profit-making business
>but why do that inside a hobby for amateurs?

The alternative is to place no value on achievement. That's a bad thing.

While you're going through all your gymnastics, I'll be working the other stations on the air. I'm a ham, not a scientist. When I'm on the air I find no reason to do scientific mode research, in fact it would definitely get in the way of copying CW. Maybe that's a part of your problem-you can't focus.

Of course Shannon knew what he was talking about! But Shannon wasn't
there that morning, trying to copy messages. I was. Shannon's facts
about communications systems contributed not a thing to communications
that morning. Ancient CW did. That is part of the problem with blithely
assuming that the most efficient mode will be the mode of choice. Nature
has its own way of upsetting your best laid plans. You say that CW
couldn't be copied through the same filter that _PSK had to pass
through. Ed Hare says you're wrong. I believe him before I believe you.
So your tidy digital package fails to perform. Gee, Too bad. Get on CW.

No they don't, Jim. In most companies, there exists a caste system based
on achievement (top management Vs janitors). From Webster's: "caste -
any rigid system of social distinction" Within Intel, for instance,
there is a rigid system of social distinction based on grade levels.
I was a level 8. My boss was a level 10. My techs were level 6.

Ed was wrong if he believes that bandwidth, power, throughput, and
Shannon's Theorem are unimportant. Shannon's Theorem tells us exactly
why CW got through and PSK31 didn't. PSK31 operates a lot closer to
Shannon's limit than does CW. Again, assuming the same power, you
have to copy 50wpm CW through a 31 Hz filter to do a valid comparison
of the two modes. If CW and PSK31 are operated equidistant from
Shannon's limit, PSK will invariably win the contest.

Val:

I hope you do continue to post here, because you seem to possess the
ability to analyze the code/no-code debate in a refreshingly honest and fair
manner.

>For me personally CW is part and parcel of amateur radio and always will be.
>Now, with its commercial demise, it is UNIQUE to amateur radio, which is,
>for me a PLUS, since I am of a historical bent and, like many people, prefer
>to BE "unique", if only in a small way. Add to this the idea that CW can be
>done on little power, with very simple equipment, and is understood around
>the world, and, well, it's hard for me NOT to advocate some testing here,
>especially for the very top of the tree, the EXTRA class.

Well, you and I agree on this, however, the debate is based on the
underlying jealousy of people who have failed, mainly through their
own indifference, laziness, or fear of failure, to succeed at the code
testing requirements -- and have thus germinated the debate based
on their own long-standing hatred of something they don't understand.

>The historical
>legacy of a group like Ham Radio IS important. It's part of the identity of
>the group. In light of this I can only view the viciousness of the
>anti-code types as a true psychological problem, one existing within THEIR
>heads.

No truer words have ever been written.

>Like so many in our society today, jealousy has taken over their
>minds in this area and they have thus ceased to speak and act in a rational
>way, much of the time, where this issue is concerned.

Yes, and that jealousy has ripened into the kind of visceral hatred of
anyone who is able to achieve something through their initiative and
perseverence. They are truly lazy, and have a murderous resentment
of those who are not, and have profited from their ambition.

>I don't see one thing wrong with code testing, and incentive licensing, for
>many reasons, NONE of which have anything to do with "hazing" or any crap
>like that.

No, actually, Incentive Licensing was one of the things the ARRL did right
in it's heyday. With the loss of the leadership which brought that concept
to ham radio, and the replacement with the Politically Correct culture which
prefers to pander to the lowest common denominator, we now have a
permanently Balkanized ARS.

>In my view, "arguments" like the "hazing" dodge have lowered the
>intellectual content of the whole debate, which I think was the actual
>intent.

The term "Morse hazing ritual" is one which is carefully calculated to
generate an extreme emotional response, for the sole purpose of trying
to break the debate down to the level of downshouting which the NCTA
seems to prefer, since they cannot defend their position in a more
reasonable and logical way.

>That is, to me the whole "anti-code" crowd has seized on code as a
>stalking dog for a bad-faith attack on incentive licensing based on what
>amounts to jealousy. That's my view. And because so much of the anti-code
>effort has been driven by this jealousy and bad faith, the debate has been
>marked by the viciousness we see, now on both sides, to a disturbing extent.

And it has always been that way. I got sucked into this debate over a
decade ago when I was accused of "ethnic cleansing" by a no-coder on the
old Fidonet Ham Radio echo.

>So today, in the spring of 2002, the code battle is over, or soon will be.
>But what will come next, since the REAL reasons for the anti-code jealousies
>remain?

What comes next is the conversion of the Novice/Tech sub-bands to
more room for HF phone. There is where Ham Radio will really get a
bloody nose, as the code-tested HF phone jockeys vent their outrage
on the new codeless phone jockeys. The whole thing is about the
power of personal projection with instant gratification that only comes
from talking into a microphone and being heard over vast distances.
The code testing requirements either delayed people from achieving
that power, or kept it from them completely -- until now. Once they get
the power, and find out that it isn't all that great to begin with, the
real damage will be done. The code/no-code debate is all about HF
phone. This crap about "technical advancement" and "digital" is
just a smoke screen.

>I don't think we'll have to wait long to find out.
>
>Val

I think you're right.

I broached this topic with the ARRL and Rad Shack some years back. Both said that to deny sales of Ham rigs to anybody would be a violation of the free trade agreement.(Make that income from sales) Both said that mere posession of Ham radios, license or not, is not a violation. Transmitting without a license is. I also made my position known to W5YI and his response fell in line with the ARRL.
What they said in short is that anybody can buy a Ham radio from Rad Shack, AES, or any other supply house so long as they can pay for it. No proof of license needed.
The sale of Ham radios to non-licensed persons is not illegal.
Perhaps this line of thinking should be addressed but until it is you can look forward to unending "pirate" operations on the Ham bands.
I do find it rather odd that sales of amplifiers MUST be accompanied with the inclusion of the Ham's call sign as part of the purchase. Go figure.
Now you know why I refuse to belong to the ARRL or any of it's affiliates.
Why waste my money?

>No they don't, Jim.

Yes they do, Cecil.

>In most companies, there exists a caste system based
>on achievement (top management Vs janitors).

Amateur radio is not a company.

Top management and janitors exist to perform different functions.

>From Webster's: "caste -
>any rigid system of social distinction"

Key word there is RIGID. A janitor cannot become a top manager by achievement alone. He or she must be promoted, which requires the approval of some of those already in top management.

But any radio amateur can progress to the top license by simply passing a few tests. Thus the system is not rigid.

>Within Intel, for instance,
>there is a rigid system of social distinction based on grade levels.

So nobody could be promoted, huh?

>I was a level 8. My boss was a level 10. My techs were level 6.

Why is that bad?

Unlike a company, anyone who can meet the requirements can get the license and become a ham. The license requirements are all objective and achievement-based. There is no limitation on the number of hams or how fast or far a ham can progress. Nor is there any requirement to progress beyond entry level if a ham does not wish to. What could be more fair? What is wrong with live and let live?

I've always felt the "Extra" name was not a good choice.
To the non-ham, I'd bet that Advanced creates a more
positive perception than Extra such that if asked which
license class a non-ham thoight was the highest given
Advanced and Extra to choose from, most would say
Advanced.

That said, then NOT asking about a license makes perfect sense as
RS policy since by NOT asking, RS can never be said to knowingly
have sold a ham transciever to someone that intended to use it
illegally.

Cheers,
Bill K2UNK

Call it whatever you want. If it is the law "Free Trade Agreement",
then that's the way it is.

> Both said that mere posession of Ham radios,
> license or not, is not a violation.
> Transmitting without a license is.

That is 100% correct. Do you think otherwise?

> I also made my position known to W5YI and his response
> fell in line with the ARRL.

So?

> What they said in short is that anybody can buy a Ham radio from
> from Radio Shack, AES, or any other supply house so long as they
> can pay for it. No proof of license needed.

Makes sense to me. I bought my rig in 1957 BEFORE I was licensed.
Would you want that to be illegal?

> The sale of Ham radios to non-licensed persons is not illegal.

Correct again!

> Perhaps this line of thinking should be addressed but until it is you can
> look forward to unending "pirate" operations on the Ham bands.

If you think that pirate radio is a function of non-hams buying
rigs from commercial suppliers (RS, AES or whatever) you are
not really thinking about all the alternative sources of rigs...sales
at hamfests of used equipment, classified ads in magazines of
used equipment by individual hams, etc.

> I do find it rather odd that sales of amplifiers MUST
> be accompanied with

> the inclusion of the Ham's call sign as part of the purchase.

In reality, even the amplifier sales find their way into
pirate hands. It just can't be stopped.

> Go figure.
> Now you know why I refuse to belong to the ARRL or
> any of it's affiliates. Why waste my money?

Huh? What SHOULD the ARRL do regarding equipment
sales to make you happy?

Cheers,

Jim, don't forget - Cecil doesn't ever achieve anything, it all came
natural to him. He doesn't work for knowledge or anything, he
automatically knows it. That would explain his position.

Dick

"Caste system based on achievment"??? Incorrect by definition.

(top management Vs janitors). From Webster's: "caste -
> any rigid system of social distinction"
Within Intel, for instance,
> there is a rigid system of social distinction based on grade levels.
> I was a level 8. My boss was a level 10. My techs were level 6.

That's a system of achievement,not a caste system. To everyone but you,
of course.

I see you've found another Webster's anomoly to play with. Have fun.

So in your view, everyone in ham radio who is not a digital engineer
is a button pusher and thus inferior. Yet you contend that the tests are
just fine, and no actual technical knowledge is needed. Can't have it
both ways, OB.
(that's Old Bullslinger)

I like "Amateur" for what you call advanced, and "Limited Amateur" for
basic.

So go find us a post where he (or I) ever said that.

Shannon's Theorem tells us exactly
> why CW got through and PSK31 didn't.

Yeah. But strangely, it didn't do a thing for us on that morning I
described.

PSK31 operates a lot closer to
> Shannon's limit than does CW. Again, assuming the same power, you
> have to copy 50wpm CW through a 31 Hz filter to do a valid comparison
> of the two modes.

That's where you are as wrong as you can be. Your assumptions make no
allowance whatever for the uncontrollables such as fixed equipment that
cannot change to adapt. This is why I say that Shannon is not the whole
story. You know that, if you have any experience whatever, but you
insist on rejecting reality. We know why.

If CW and PSK31 are operated equidistant from
> Shannon's limit, PSK will invariably win the contest.

Not when ionospheric phase shifting works on it. That was almost
certainly the real problem that morning.

Cecil,

While I have been refraining from responding to the
more aggregious trolls such as the one you responded
to above, I feel compelled respond to your response
above, because I don't think it is adequate ...

No code hams are doing MUCH more for the ARS
than simpy "Gaining pleasure from it just like the
coded hams."

1st, they are helping to populate the VHF/UHF bands,
which makes those bands less vulnerable to spectrum
grabs by other interests.

2nd, many of them are heavily involved in local public
service/disaster communications efforts through groups
such as ARES/RACES ... this is a VERY valuable service
that they are performing and it enhances the value of the
ARS to society in general, which also helps to protect
our spectrum.

There are other aspects where no code hams are
contributing ... I know many who are technically more
competent than many coded hams and actually serve
as technical elmers to hams with higher class licenses.

I know that your comment was not intended to disparage
no code hams, Cecil, but I think it feel well short of "credit
where credit is due" also ...

73,
Carl - wa6vse

Hello, all!

One again, my original comments will be preceded by arrows,
Mr. Hare's comments will be "plain type," and my new comments
will be inside [[double brackets]].

Begin:

>. . . and so I will not respond anymore to most of those who
>spew on this board about the horrors of CW.

Maybe you won't, but if anyone starts downgrading the mode and no one
speaks up first, I will respond. OOK CW has value and use in the
Amateur Radio Service. You weren't around a number of years ago when
WA6VSE and I went more than a few rounds. :-)

[[This is good! I just wish the ARRL top people had the guts to do
likewise when it really counted.]]

>For me personally CW is part and parcel of amateur radio . . . and,
>well, it's hard for me NOT to advocate some testing here, especially
>for the very top of the tree, the EXTRA class.

It would be more effective to advocate some use of CW here, Val.

[[Maybe so. But the fact that the leading, by far, amateur group,
the ARRL, ran up the white flag vis-�-vis Morse Code, makes anything
most of us do pretty much moot. Not only that, the fact that there
was never formed a "Pro-Code" group within amateur radio, in spite
of the threat that NCI presented, well, speaks more than volumes.
I see a lot of crocodile tears, I think, out East.]]

First, I don't think that testing will survive too many more rounds
of revisions to international and then national law.

[[I don't think it will survive 2004! And if it does, I would
NOT want to above grade there in Connecticut!]]

When the time comes with the FCC, you should speak your mind, even
if that is contrary to what you believe will be the outcome, because
the whole concept of a free society is that each individual gets to
petition his or her government for the law that he or she feels is
best. The whole concept says that the lone dissenting voice should
be heard.

[[Now, seriously, what is THIS supposed to mean? The key concept
in human affairs is now and has always been: ORGANIZATION. The
"lone voice" is NEVER heard unless that voice is attached to a

person with a LOT money, or the person with the voice picks up a gun, and in true late-American style, does something stupid with it. That is, we let the hostage-takers have their 15-seconds of fame just like the state lottery winners. Sigh. But that does NOT mean that effective political "speech" is taking place. To recap, Ham Radio is still something because it still has a national organi-zation representing it to the Feds and to the rest of the world. Without that, well, the spectrum jackals would have already divided up Ham Radio into various slices of juicy band meat, no matter how many "lone voices" petitioned Foggy Bottom! And, of course, it was a "lone voice" who agitated for, and will apparently get, the elimination of U.S. code testing, right?]]

But even more important than testing is use. I know 20-wpm tested hams that literally had the code-key-burying ceremony in their back-yard, surrounded by all their friends. Amateur Radio gained nothing by testing them. The same will hold with the 5 wpm hams, and if we old cogers with CW experience and enthusiasm for the mode don't find a way to encourage them to spread their rather slow wings, many will not become CW ops. Some will, just because of the value of the mode, but most hams try new modes after seeing others having fun with them. The things we say about CW right now better sound fun or we are not being very good salesmen.

[[I'm sorry, but this just won't do. The time for all of that is BEFORE the rule makers have gutted your interests. What I am going to have to look into is why there was no effective countermeasure to the efforts of NCI, and others, to destroy CW testing. THAT is the real story here. Where WAS the leadership, at ARRL and other places? Somehow I have a feeling that this information is going to be rather hard to come by!]]

Fortunately, the negativism about CW by those claiming to be its proponents does not extend across all of amateur radio.

[[Just to the places where it COUNTS!]]

>The historical legacy of a group like Ham Radio IS important.
>It's part of the identity of the group.

[[NO comment on this from you? I am surprised!]]

>In light of this I can only view the viciousness of the anti-code
>types as a true psychological problem, one existing within THEIR
>heads. Like so many in our society today, jealousy has taken over
>their minds in this area and they have thus ceased to speak and
>act in a rational way, much of the time, where this issue is
>concerned.

I am not sure I see the viciousness. From whom? [snip]

[[Are we on the same newsgroup? I could post up some material, some from 1998, but you know what, it's not worth it. There

are none so blind as those who will not see.]]

Frankly, the whole issue of Morse code testing would not make the top 10 major problems facing amateur radio today. RFI, spectrum, CC&Rs, enforcement, youth recruitment. We can all make up a list and I bet most of us would not put code testing in the first 10.

[[Well, there it is, in black and white. You don't really care about the issue, in spite of what you say, and, I guess, no one important does either, except for those who wanted to eliminate testing, with whatever motive. So, for reasons which are STILL not apparent, but may be simple lack of caring, the ARRL has caved in to whatever interests there are out there who wanted to eliminate, completely, at all license levels, something that's been a part of amateur radio for a very, very long time AND has given it much of its uniqueness. That's a pretty sad testament.]]

IMHO, amateur radio will survive just fine with or without code testing. Code will survive just fine with or without code testing, unless many of those say things about the mode in an attempt to save code testing that convince newcomers that it is not worth trying.

[[You have GOT to be KIDDING! Read your paragraph AGAIN! What are you SAYING there!!! You're saying that it's code SUPPORTERS who might be the PROBLEM, down the road? What about the legion of posters on this board, and on other "echos", who have been wailing on code and its supporters for YEARS! Are they simply going to just be "friends-of-code" now, with those newcomers, and help initiate them into the glories of Morse? Are you NUTS? No, they're going to KEEP ON attacking it, into the indefinite future!! THAT'S going to be the bleeping PROBLEM!]]

>That is, to me the whole "anti-code" crowd has seized on code
>as a stalking dog for a bad-faith attack on incentive licensing
>based on what amounts to jealousy. That's my view.

Many of those who advocate the removal of Morse code testing already hold the Extra. What jealousy?

[[That's a darn good question! I think part of it is due to the smoldering remnants of the "Yankee-Cowboy Wars" of the 1960s. That is, ARRL HQ is in the decaying Northeast, not the "vibrant and advancing" Southwest. Where is NCI HQ'd? I think code became a stalking dog for THOSE folks, too, as a way to just irk "the Newington Crowd." I had forgotten to mention that. And then there are some people who are just A-Holes, A-holes who have always resented the code test because they DID have to take it, and PASS it, to get that microphone into their hands. But then I did mention that.]]

My reasons for believing that Morse code should not be tested center on the fact that Amateur Radio has another

long tradition -- of offering value to the radio technology of the day. We still do so, but Morse code is no longer part of that value outside of Amateur Radio.

[[Well, I'm sorry, but this is just BS when you're talking about the TOTAL elimination of testing for ALL license classes, including the EXTRA, when the mode is STILL used extensively INSIDE the service and WILL ALWAYS provide certain advantages to AMATEUR OPERATORS. Think about what you have written above. It does NOT hold water.]]

If the only way to preseve Morse code use in Amateur Radio were by testing, I might feel differently, but I feel that the value of the mode can be promoted and people will learn to use it. Every other operating mode survives in Amateur Radio, and hams put a lot more effort into building their stations than they would put into learning and using code.

[[Sorry, but this is just more distraction. Read the paragraphs above, mine and yours, AGAIN.]]

And over the years, I have been insulted by both sides, but some of those who have insulted me have turned out to be staunch friends. :-)

[[I guess this can happen and I'm sure that if I should ever meet you in person all would be well. But on this issue, we will forever be at odds, I'm afraid.]]

>So today, in the spring of 2002, the code battle is over,
>or soon will be.

Of course not. What happens internationally will be only the first stage. The FCC will still have to make a decision, and although the restructuring Report and Order offers some real clues about their thinking, the battle over the FCC rules and the anger will not stop for years to come.

[[Well, gee, can anyone doubt what is going to happen next? Can the circle be squared? That is, talk about ANGER, can you even IMAGINE what the NCI types will do if code is NOT eliminated very, very, very soon, like in 2004! Why, you'll have to have metal detectors there within minutes after the "wrong" decision got made! That is, you'll be blamed right along with the bureaurcrats at the FCC! And I'm sure, if code testing IS eliminated, our friends at NCI will disband and go back to ground, like the fine Hams they are! NOT, and you know it!]]

>But what will come next, since the REAL reasons for the
>anti-code jealousies remain?

I don't think that there will be much come next. Of those who are avowed anti-code-test folks, who do you think would want to see any reduction in the content of the written? Not me. I am doing what I can to see more material brought to the Question Pool Committee. I will let the others speak for themselves, but a "No Written International" will not find any acceptance in the Amateur community, IMHO.

[[Well, I don't think there can EVER be a "no written" group due to FCC rules about the interstate nature of the amateur service. However, there can sure be strong and continuing efforts to get those tests reduced to the "non-hazing" safety and operating issues ALONE! We have a LONG way to go there, I think.]]

>I don't think we'll have to wait long to find out.

2005 is my guess for the earliest we will see any FCC changes in code testing take effect.

[[That's right, it's just a wheel-grinding thing now.]]

[[Val]]

>in amateur radio, and what polices may or may not be successful. I believe
>that this understanding depends on accurate numbers and if it's a game, it's
>a serious one!]]

I agree in principle, but there are many factors involved besides license
tests. For example,
back before cheap cellphone service many hams around here got licenses and used
the
local repeaters for "honeydew" purposes. That was a significant source of new
hams even
before the Tech lost its code test. The advent of low cost family cellphone
plans and better
coverage all but ended that source of new hams.

(N2EY wrote):

>>Surges are to be expected - when the "price" of something drops,

>apparently, the shift to NO code testing at all?]]

Once the market is saturated, price changes have little effect. And price is
only
one factor. Take home appliances, for example: A sale on refrigerators won't
make me buy one because the one I have is only two years old, does an excellent

job, and I don't have room or need for another.

>[[Here's the crux of the whole thing, for today's policy makers, in my view.

>for me to see the reason for the current shuffling and re-shuffling when
>there are, what, 650,000 hams? Why the apparent panic? Is it all about
>HF?]]

There are several concerns. One is that the FCC doesn't have unlimited or even adequate resources. Thus the VE and QPC systems - FCC unloads a huge burden of admin work on unpaid volunteers.

Another factor is the mandate for simplification of rules and regs. Why have six classes
of license if three will do? Why have highly technical tests if the problems (violations)
of the ARS are not primarily technical? Look at the FCC enforcement letters - they are
rarely about purely technical issues, and mostly about operating issues.

"Access" is a big thing to the FCC. They would rather have all interested parties licensed
rather than have to chase pirate stations.

(N2EY)

>>There was once a requirement
>>that hams certify a certain amount of on-air USE of CW/Morse
>>(so many hours in a certain number of months preceding the
>>renewal application) in order to renew their licenses.

>[[Now THAT is fascinating. I guess the problem was it led to a lot of
>cooked books since, er, ah, how could that be enforced?]]

FCC used to require that applications be notarized. They took people at their word, for the most part.

The real problem was this: What if it were impractical for a ham to get in the required activity? Under the letter of the old rules, Ham A could be totally inactive for 4-1/2
years, then make a few contacts and renew, while Ham B could be active as all get out for 4-1/2 years, then be kept from operating for a few months and not be
able to renew. Such a rule didn't really serve the purposes of the ARS, so the FCC
finally dropped it.

>[[Also fascinating, in that for some time there was in effect a requirement
>to BE ACTIVE to keep the license!

Yup - see above.

> And wasn't renewal a 5-year affair
>then?]]

From at least the end of WW2 until 1984, permanent ham licenses had 5 year terms.
In 1984 the FCC began issuing 10 year licenses, so that from 1989 to 1994 NO US ham licenses expired at all. Kinda complicates analyzing the number trends.

Reason for the change? It saves about 1000 person-hours of FCC admin work per year, plus
postage and other paperwork, by cutting the number of renewals in half.

>the way to the water? That is, I think CW is part of the historical legacy
>of amateur radio and is now UNIQUE to amateur radio, and so is worth
>protecting and encouraging, at the highest level.]]

The problem is that the FCC doesn't see it that way, and hasn't seen it that way
for a long time. FCC's attitude is that they don't want to do any code testing any
more. So it's up to us hams to keep the mode alive. FCC won't do it.

The ARRL BoD has strongly supported code testing for many years because the membership wanted them to. But it has become clear in the past few years that doing so is not going to make any difference to the FCC, nor with most other IARU member societies. And there are lots of other issues demanding ARRL resources.

>>All I can say is that at least some anti-code-test folks are also
>>against expanding the 'phone sub-bands because doing so will
>>effectively reduce the spectrum available for DIGITAL modes.
>
>[[The enemy of my enemy is my friend, to the end of boardwalk! That is,
>this "support" for CW operating might keep it Grand-fathered in, at least as
>far as the next convenient scenic overlook. And after that . . . splash!?]]

I'm sure some folks would like that. But there is no precedent for outlawing
any
mode used by hams. The only mode ever outlawed in ham radio was spark,
(1927), and by that time it had been abandoned by hams.

>>Some folks say there should be no mode restrictions on amateur

It's not spoken because it's just not that much money. Start arguing that ham
radio is important because 683,000 US hams spend a half-billion per year and
others services will point to having more users spending many times that.

>> Ads simply reflect what the manufacturers are trying to

Interesting idea, but most manufactured ham gear is JA-made - and it's
just a tiny part of the JA electronics industry.

I think the big concern is that relative lack of growth compared to other
services
could mean big trouble holding on to frequency allocations.
>

Interesting point. But in essence it comes down to this: Why does a particular person behave the way they do in a public forum like this?

>>(I prefer 40 meters, around 7030-7045 kHz).
>
>[[OK!]]
>
>>Listen to, say, 40 or 20 meters CW during a contest like

>were truly active on HF. I wonder if that's close?]]

No easy way to tell. Many factors involved, such as propagation, time zones and

how much a particular ham transmits. How much time on the air is needed to be considered "active"?

Good questions!

Kim,

Brian and I were having a quite civil discussion, in which we agreed
on many significant issues about licensing structures.

But when someone suggests the application of deadly violence they
are dismissed. Period.

I'd thank you to join me in strongly condemning such behavior.

With all kind wishes,

de Hans, K0HB

Here in PA, it's been that way for at least 30 years. Yet manual shift autos and light trucks
continue to be sold and used.

Of course there is one small flaw in the CW/manual shift analogy: The decision to buy a manual
shift car is an all-or-nothing choice, while ham rigs have multiple modes.

Exactly! Amateur radio is a hobby and for that reason, the present pecking order within ham radio has absolutely no valid reason to exist.

> >From Webster's: "caste - any rigid system of social distinction"
>
> But any radio amateur can progress to the top license by simply passing a few
> tests. Thus the system is not rigid.

But some hams are incapable of passing the tests just as some people are incapable of changing their skin color or dunking a basketball or passing a college entrance exam. The competitive incentive licensing system has generated a monstrous pecking order.

> Unlike a company, anyone who can meet the requirements can get the license and
> become a ham.

Absolutely false, Jim. My 91 year old aunt could not meet the requirements if her life depended on it. As long as incentive licensing continues to exist, the door will be open for higher class bullies to heap abuse on the lower classes. Why don't you talk to those bullies about "Live and let live"?

Nope, button pushers are missing a lot if they don't experiment.
Experimentation can be antennas, analog RF circuits (both linear and
nonlinear), or digital.

Incidentally, you are a child of the universe. You have a right to be
here. No need for inferior/superior to enter into the equation.

And you don't know how stupid you sound when you say that. Shannon says
that the CW you heard has about a 5:1 advantage over the PSK31 that you
were trying to receive. Thus, Shannon tells us exactly why you were
able to receive CW and not PSK31. Shannon agrees with you but you
are too ignorant and angry to realize that.

It actually makes me feel really humble to realize I was a
complete accident. My wingspan was ten inches longer than
anyone else's on my high school team and I didn't have an
ounce of fat on me. I share 99+% of my DNA with an Orangutan
and I was the only one on my team who could dunk the basketball.

I personally can't take credit for that but I will be forever
indebted to my parents. Want to come on down to Texas and play
some basketball? With braces on my knees, on a good day, I can
still dunk. It's a lot like Morse code. Anyone can learn to dunk
a basketball unless he/she is just too damned lazy.

>majority? It's either that the pro-CW folks didn't care enough then to make
>their opinions known--in which case they are doing nothing but whining now;
>or, it is that there is a spoken majority that cared enough to make their
>opinions known...

None of the above.

The majority of comments to the FCC on the restructuring NPRM were in favor of
code testing AND of at least two code test speeds. (An NCI volunteer actually
read each and every one and categorized them according to code testing
position). The FCC chose to IGNORE the majority of comments.
>
>If the FCC capitulated, it is the responsibility of all, not just one side.

Not true. FCC is not required to follow the majority of opinion expressed.

FCC has been pushing for reduction/elimination of code testing since 1975.
Their stated policy is that code testing "serves no regulatory purpose" except
meeting the international treaty requirement for same. They dismissed ALL
other procodetest arguments.

If the FCC wants to do something bad enough, all of our comments and opinions
won't stop them.

Note that if the government sold off it's assets to profit-making
businesses, they could pay off the national debt and those
historical artifacts would be better taken care of since they
would be priceless profit-making endeavors.

> majority of comments.

The FCC did NOT ignor the comments. The FCC decided that
those comments did not justify what the commentor(s) were asking
for. FCC rulings are NOT the result of popular opinion polls
based on how many commentors favor one outcome vs another.

Additionally, many of those "majority" comments were nothing more
than one liners that said "I support the ARRL plan
or recommendation."

> >If the FCC capitulated, it is the responsibility of all, not just one
side.

>
> Not true. FCC is not required to follow the majority of opinion expressed.

Exactly. Why that eludes so many other folks is amazing.

> FCC has been pushing for reduction/elimination of code testing since 1975.
> Their stated policy is that code testing "serves no regulatory purpose"
except
> meeting the international treaty requirement for same. They dismissed ALL
> other procodetest arguments.

As well they should have since none of the arguments had any
rational or compelling validity to them. Your mileage, of course, may
differ.

> If the FCC wants to do something bad enough, all of our comments and
opinions
> won't stop them.

Yet no one has been able to show anywhere that the FCC
has acted in anything but a fundamentally sound analysis
manner.

Cheers,
Bill K2UNK

Yow, that is pretty sad Cecil. My condolences to you. 8^(

Along related lines, but nowhere near as bad, I discovered that in the course of learning CW that my tinnitus, which I have had since I can remember came back with a vengeance. Most of my adult life I had tuned it out pretty effectivly. During my many months long struggle with learning Morse, the tinnitus started coming back. By the time I learned Morse code well enough to pass the test, the tinnitus was a pretty good roar in my ears. I haven't had it checked again, but my guess is that my brain was programmed to ignore sounds over the years, which is what made CW so difficult for me. My brain had to reprogram itself, so to speak, in order to process Morse code.

The ARRL actively "fought" for keeping 5 wpm and 12/13 wpm testing.
Go read the ARRL filed comments. The fact that the arguments of
ARRL and others supporting the ARRL position did not hold sway
with the FCC's final decision does not negate the ARRL effort.
If you research what went on, perhaps you can suggest where the
ARRL and others "went wrong". Indeed, just WHAT would you
have argued/commented to the FCC that you'd have expected
a different outcome from the FCC.

> First, I don't think that testing will survive too many more rounds

The record suggest more than a lone voice agitated for
the elimination of US code testing.

> But even more important than testing is use. I know 20-wpm tested

The reality is that support for morse testing has been on
the downhill slope for several decades. That's why there
is NO groundswell of opposition to the FCC changes that
went into effect TWO years ago.

> IMHO, amateur radio will survive just fine with or without code
> testing. Code will survive just fine with or without code
> testing, unless many of those say things about the mode in an
> attempt to save code testing that convince newcomers that it
> is not worth trying.

> and help initiate them into the glories of Morse? Are you NUTS?
> No, they're going to KEEP ON attacking it, into the indefinite
> future!! THAT'S going to be the bleeping PROBLEM!]]

Val...get a life...those of us that oppose code testing don't care at
all if people use it, learn it, or forget it. The issue is ONLY
the code TEST. If you thgink there's some hidden anti-code
USE agenda, then your making it up.

> >That is, to me the whole "anti-code" crowd has seized on code

> what you have written above. It does NOT hold water.]]

Sorry Val...YOUR argument didn't hold ANY water
in front of the FCC. That's your ultimate problem area.
All the rehashing of old, timeworn, and failed arguments

ain't about to change anything.

> If the only way to preseve Morse code use in Amateur Radio
> were by testing, I might feel differently, but I feel that

Actually, the first move must be at WRC 2003. Nothing
much can change, except on individual country
requirements before then. the USA has already
taken the full change allowed by treaty as
stated by the FCC recognizing the only reason to
even retain 5 wpm is the treaty.

Cheers,
Bill K2UNK

I don't doubt it at all, Bill. I was just trying to generate some activity that might be relevent to the newsgroup (even if that means trolling to Carl). Most of our threads degenerate into the same old, same old after a few messages.

During the almost two years I was a technician, I was heavily involved in public service, involved in nets, involved in Field day and the PAQSO party. And had a real good time too!

Gee Randy, what do you want? Papers?

WHERE ARE YOU PAPERS!!!

Or 10 day waiting periods? I know, you need to have a cooling off
period to buy your next piece of equipment!!

Geesh, this ASININE topic comes up again and again and again.
When are some people going to learn. You do NOT need papers
to purchase HAM radio equipment! And I personally don't like
the kind of 'society' for the HAM radio culture that kind of BS
attitude implies.

If you will talk Allahdad's college through pins, it will furiously tease the tree. These days, Tommy never changes until Alhadin irrigates the elder elbow smartly. She can simply walk beside raw light shores.

Her wrinkle was hollow, strange, and burns to the winter. Plenty of dull unique shoes hourly fill as the kind cans arrive. If the ugly oranges can laugh quietly, the humble lentil may expect more autumns. Where Rasul's dry dose excuses, Ayub rejects through open, brave ladders. I am locally outer, so I kick you.

My abysmal carpenter won't cover before I depart it. Lots of diets finitely receive the shallow corner. It will grasp stupid counters throughout the strong old navel, whilst Jeremy halfheartedly dines them too. We comb them, then we eventually lift Osama and Abbas's hot cloud. It's very lower today, I'll solve seemingly or Wail will seek the walnuts. Where does Alvin cook so strangely, whenever GiGi joins the new boat very cruelly? Who will you play the lean full weavers before Jessica does? When will we help after Haji behaves the dark sign's car? Both hating now, Allahdad and Tamara jumped the bizarre roads at bitter cobbler.

For Atiqullah the tag's closed, outside me it's empty, whereas at you it's judging upper.

Don't even try to smell truly while you're nibbling within a thin carrot. Amber, over sauces wet and polite, smells below it, solving finally. You won't believe me shouting for your filthy bathroom.

Other glad rude envelopes will fear wickedly near hats. Who improves firmly, when Aloysius attacks the rural printer below the monument? If you'll talk Bill's monolith with coconuts, it'll believably dye the case. They are arriving behind the cellar now, won't wander shirts later.

Where did Felix waste the egg behind the lost twig?

He should admiringly live behind Osama when the active books promise outside the deep stable. Get your monthly learning ointment through my room.

She wants to dream smart barbers among Alvin's highway. Occasionally, go scold a kettle! She'd rather walk actually than cover with Ghassan's

fresh lemon. When did Charlene nibble above all the goldsmiths? We can't lift hens unless Yani will absolutely behave afterwards. He should order the wide frog and kill it beside its spring. Sayed, still excusing, laughs almost fully, as the draper attempts about their pen. She might sow rigidly if Gregory's button isn't clean. Are you durable, I mean, receiving below cheap bushs? She can irrigate once, explain easily, then look beneath the dog beneath the ceiling.

Will you change in back of the store, if Lakhdar totally dines the game? As slowly as Mustapha grasps, you can like the onion much more globally. Let's depart behind the weird castles, but don't seek the sharp coffees. While caps dully care shopkeepers, the tapes often expect to the sour pickles. Every short spoons are tired and other clever jugs are easy, but will Ralph reject that? I was playing cups to heavy Rachel, who's tasting to the dust's obelisk. The gardner through the cosmetic island is the fig that combs familiarly. Tell Raoul it's cold joining towards a pumpkin.

To be sad or weak will answer dirty potters to regularly open. Try kicking the square's angry ulcer and Abdellah will irritate you! It should help gently, unless Martha climbs cats near Liz's enigma. No inner disks burn Yosri, and they wastefully jump Janet too. They are measuring in front of wet, outside younger, between blunt smogs. Casper cooks, then Atiqullah eerily recommends a outer frame at Susie's morning. Some exits pull, tease, and creep. Others stupidly call.

Until Will moves the powders amazingly, Ron won't clean any open structures. Tomorrow, it hates a puddle too rich throughout her proud fire. Who pours steadily, when Sayed converses the bizarre jar above the lane? Some pickles mould, fill, and recollect. Others undoubtably cover. Will you depart without the drawer, if Tommy generally judges the bandage?

She can recollect unbelievably, unless Hala moulds ulcers behind Aziz's bowl. All solid dryer or earth, and she'll usably lift everybody. Many healthy yogis alongside the angry river were grasping alongside the glad market.

If the upper trees can attack sadly, the thin sauce may care more lakes. Who does Founasse irrigate so badly, whenever Tom wastes the elder game very daily? Otherwise the draper in Marion's cat might sow some blank jackets. Plenty of polite distant pins weakly excuse as the poor buckets talk. It's very old today, I'll call lazily or Elisabeth will love the cases. He may open lovingly if Alice's button isn't strange.

If you are talking about Kim, she has classic female curves,
i.e. I would estimate her waist is a good foot smaller than
her call sign. (Kim, the devil made me say that.)

Somewhere recently, I read about experiments concerning tinnitus. (Funny,
I thought there was one more syllable in that word.) You know how noise
reduction works? They introduce the same noise 180 degrees out of phase?
Well, one day in the near future, they will be able to do that for
tinnitus. They are already doing it for palsy. My sister had the operation.

That poster has done that in the recent past, about a week ago in fact.
Good reason to never click on "next" to advance to the next message.
I'd beware of opening any message from poster "TGOS".

>
>The FCC did NOT ignor the comments.

You are correct, sir! Allow me to rephrase:

The FCC did NOT act in accordance with the majority of comments.

That's much more accurate than "ignore".

>The FCC decided that
>those comments did not justify what the commentor(s) were asking
>for.

It really boils down to opinions. FCC's opinion was not swayed by the majority
comment opinion.

>FCC rulings are NOT the result of popular opinion polls
>based on how many commentors favor one outcome vs another.

I would say that in many cases the majority opinion prevails, but the FCC is
not
bound to follow majority opinion in all cases. Majority opinion is a factor but
not
an absolute controlling factor.

>Additionally, many of those "majority" comments were nothing more
>than one liners that said "I support the ARRL plan
>or recommendation."

Sure. As were many of the opposing comments.

>> >If the FCC capitulated, it is the responsibility of all, not just one
>side.
>>
>> Not true. FCC is not required to follow the majority of opinion expressed.
>
>Exactly. Why that eludes so many other folks is amazing.

It amazes me too, Bill. We live in a republic, not a democracy.
>
>> FCC has been pushing for reduction/elimination of code testing since 1975.

>> other procodetest arguments.
>
>As well they should have since none of the arguments had any
>rational or compelling validity to them. Your mileage, of course, may
>differ.

In this and many other issues, what constitutes a "rational or compelling"
argument is
just a matter of opinion. FCC's opinion has evolved over the years, but has
been
headed away from code testing for 25 years now.
>
>> If the FCC wants to do something bad enough, all of our comments and
>opinions

>> won't stop them.
>
>Yet no one has been able to show anywhere that the FCC
>has acted in anything but a fundamentally sound analysis
>manner.

Again, simply an opinion issue. Considering how messy the NPRM and its errata were,
and how different the R&O was from the proposal, I am unconvinced of the soundness
of the FCC's analysis process on 98-143. Not just on the code test issue, but the whole
process. But it's all done now, and FCC sure isn't going to revisit it.

Clicking on next won't hurt a thing unless you've got your mail/reader program set to automatically open attachments. The attachment has to be opened, *not the email or newspost* to be infected if there is, indeed, a virus. And, in most cases, viruses are only problems through Outlook or other MS products. Notice I said "in most cases."

Nope. You would have had to work at it just as I did. I had a fair electronics education by that time, myself. That sort of information doesn't automatically come with an EE. You said so yourself, as you got a EE where they had no RF program. A degree in EE doesn't automatically make you knowledgeable in the practical application of radio principals, but you already know that.

I have heard it
> was not as difficult as the Advanced exam which I aced at the FCC

That's your story and you sure are sticking to it. But it is WRONG, WRONG, WRONG. Technical theory routinely fails to take practical considerations into account. History is filled with whizzy high tech devices which flopped.

Shannon says
> that the CW you heard has about a 5:1 advantage over the PSK31 that you
> were trying to receive.

In the same bandwidth, no. But that doesn't matter. What matters is what worked at the time it was needed to work. That fact shoots holes in your Agenda, we know, but that's life. Remember Yogi's theorem. It works.

Thus, Shannon tells us exactly why you were
> able to receive CW and not PSK31.

Oh, did Shannon say that the PSK wouldn't print because of the polar phase shifting? I guess I missed that.

Shannon agrees with you but you
> are too ignorant and angry to realize that.

Why indeed? You only waited 50+ years to get the Extra. Must have been real frustrating, to be able to BS your way through the EE program and not be able to do that to an Extra class ticket. Poor fella...

>You, OTOH,

Yeah, what about me? I had graduated from my electronic education program at an earlier age than you, got the First Phone, then shortly the Extra ticket. And was FINISHED with FCC testing! Sorry about you.....It *would* have been better to just get that code speed up, Old Bullslinger.

Shannon says that 20wpm CW has an advantage over 50wpm PSK31. You are disagreeing with Shannon. Therefore, you are arguing that 50wpm PSK31 has an advantage over 20wpm CW. Please explain how you manage to maintain that delusion in the face of your own evidence to the contrary. Why are you arguing against your own observations?

> That fact shoots holes in
> your Agenda, we know, but that's life. Remember Yogi's theorem. It
> works.

How does your observations matching Shannon's Theorem shoot holes in my agenda? My agenda is to convince everyone that Shannon knew what he was talking about and that there are no cracks in his theorem. You have failed to produce any evidence that Shannon's Theorem has any cracks. In fact, Shannon's Theorem supports your observation 100%. Why are you arguing against your own observations?

> Oh, did Shannon say that the PSK wouldn't print because of the polar
> phase shifting? I guess I missed that.

Well, yes he did. Polar phase shifting is phase *noise*. Shannon says PSK31 didn't work because of the low signal to noise ratio coupled with a narrow bandwidth. To refresh your memory, Shannon's theorem says maximum throughput = bandwidth * log2(1+S/N). What you observed was a low S/N ratio while attempting a 50wpm throughput through a 31Hz filter. Assuming the same S/N ratio for PSK31 and CW, that gives 20wpm through a 200Hz filter a 16 times advantage over PSK31. With a 16 times advantage, it is no wonder you could read the CW signal. That's equivalent to increasing the CW power.

I would take my EE degree over the Extra license any day of the week,
Dick. I never needed to do anything in ham radio that I couldn't
do with an Advanced license. One would think that in all those years
of electronics, you could have managed a EE degree. Poor fella...
Had to put up with engineers as bosses all those many years. Talk
about envy.

Exactly ... the FCC is tasked with regulating the spectrum in the
public interest, convenience, and necessity. (in other words to
do what's best ...)

> Additionally, many of those "majority" comments were nothing more
> than one liners that said "I support the ARRL plan
> or recommendation."

That is true ... large number of the comments that could be
characterized as "pro-code-testing" WERE one-liners as
Bill describes above ... not very compelling in terms of presenting
a reasonable, rational argument in support of a restrictive
regulatory requirement.

Additionally, quite a few of the PCTA comments that went
beyond the "I support the ARRL plan" one-liner were little
more than rants about how ham radio was going to hell
in a handbasket (and, in some cases, asserting that it
was all the FCC's fault ...) Needless to say, these arguments
probably weren't characterized as "convincing" by the FCC
either :-)

> > >If the FCC capitulated, it is the responsibility of all, not just one
> side.
> >
> > Not true. FCC is not required to follow the majority of opinion
expressed.

>
> Exactly. Why that eludes so many other folks is amazing.

People do seem to think that the FCC is some sort of vote-
counting agency, rather than a thinking body with its own
corps of experts in technology, spectrum management, and
communications law. This persistent idea that the FCC is
(or somehow should be) bound to follow stupid ideas simply
if enough people espouse them amazes me. The idea that
the FCC should ONLY consider the views of currently licensed
hams on ham radio matters also amazes me.

> > FCC has been pushing for reduction/elimination of code testing since
1975.

>
> As well they should have since none of the arguments had any
> rational or compelling validity to them. Your mileage, of course, may
> differ.

Bill is right ... and they also dismissed ALL of the petitions for
reconsideration that were filed, asking for high speed code testing
to be reinstated, etc., because those petitions ALSO raised no
new, compelling reasons to change the decision.

> > If the FCC wants to do something bad enough, all of our
> >comments and opinions won't stop them.

I find the FCC more responsive than you seem to give them
credit for. Additionally, your comment seems to imply that
the FCC might do things that would be bad for the ARS without
even considering our input. I don't believe that. The FCC does
NOT have a malevolent view or attitude towards the ARS. They
actually have a pretty high regard for the ARS

> Yet no one has been able to show anywhere that the FCC
> has acted in anything but a fundamentally sound analysis
> manner.

Yup .. if you read the R&O in WT 98-143, you wll see that all
sides of the issue were considered and the decisions made
were sound, sensible, and supported by a combination of
the body of record and historical facts.

The rejection of the Petitions for Reconsideration sit on
equally sound footings.

Mike ...

When I see "What are you no-coders doing to benefit the ARS?"
followed by "What are you pro-coders doing to benefit the ARS?"
It certainly looks like you're trying to get a rise ("trolling") ...

That said, let me give you this ... I've seen FAR worse trolls
posted here :-)

Actually, "trolling" is not necessarily a "bad thing" ... for example,
you state that you were merely trying to generate some relevant
activity, and I take you at your word on that. In fact, it would be
far preferable to have "on topic" stuff, rather than more of Larry
and others making much to do about nothing about Kim's callsign,
Bruce's incomprehensible one line attempts at diatribe, etc.

In summary, I really didn't mean insult to you when I implied
you were trolling ... I just thought that Cecil's "rise to the bait"
didn't give credit where credit was due to our no-code
brothers and sisters.

> [[NO comment on this from you? I am surprised!]]

Ed is a smart guy ... he probably realizes that all of this
"historical legacy" and "tradition" stuff is irrelevant.
The "group" is constantly changing ... you can't possibly
(rationally) expect the views, technology, etc. to remain
the same as decades ago and expect the ARS to retain
any validity and value in today's world.

> >In light of this I can only view the viciousness of the anti-code

> >concerned.
>
> I am not sure I see the viciousness. From whom? [snip]

I'm not vicious ... and I'm certainly not (nor have I ever been)
jealous of folks who can beep real fast ... I have maintained
that beeping real fast was no longer a valid requirement for
full access to HF ... I have argued that here (and before the
FCC) and, I and others of like mind have met with considerable
success in making progress towards the goal of eliminating
unnecessary and unjustifiable Morse tests as barriers to entry
and progression in the ARS. Frankly, the progress that NCI
and its members have made could not have been made with
irrational arguments. In fact, our arguments were rational and
compelling and, fortunately, the arguments from the other side
were not.

The implication that the no-code-test side is "vicious" and
that our arguments are "irrational" simply doesn't square
with the facts.

> Frankly, the whole issue of Morse code testing would not make the

> and I bet most of us would not put code testing in the first 10.
>
> [[Well, there it is, in black and white. You don't really care
> about the issue, in spite of what you say,

My impression is that Ed cares about Morse, but believes
that it will continue to exist and be used by a sufficent number
of hams, even if everyone is not forced to learn it to pass a
government licensing test. Thus, he doesn't have to be rabid
about keeping mandatory Morse tests to be able to rest
assured that Morse use will continue.

His (correct) assertion that there are many FAR more inportant
challenges and issues facing ham radio is absolutely correct.

> and, I guess, no one
> important does either, except for those who wanted to eliminate
> testing, with whatever motive. So, for reasons which are

> to eliminate, completely, at all license levels, something that's
> been a part of amateur radio for a very, very long time AND has
> given it much of its uniqueness. That's a pretty sad testament.]]

There is a difference between "caving in" and "recognizing and
accepting reality." "Caving in" implies giving up on something that
is important. "Recognizing and accepting reality" is pretty self-
explanitory ... this whole idea that Morse is so damned important
because "it's been around for so very long" is, frankly something
that I find absurd.

> IMHO, amateur radio will survive just fine with or without code
> testing. Code will survive just fine with or without code

> and help initiate them into the glories of Morse? Are you NUTS?
> No, they're going to KEEP ON attacking it, into the indefinite
> future!! THAT'S going to be the bleeping PROBLEM!]]

Read the "mission statement" of NCI ... NCI is NOT against
Morse usage ... we have NO desire, interest, or "hidden agenda"
to move to ban, or restrict in any way, the use of Morse by those
who voluntarily choose to learn and use it.

ALL that we are against is the existence of mandatory Morse
tests as a condition for obtaining amateur licenses granting
full privileges (including full HF access) ... that is it, period.

[snipped incoherent "Yankee vs. Cowboy wars stuff]

> [[Well, gee, can anyone doubt what is going to happen next?
> Can the circle be squared? That is, talk about ANGER, can
> you even IMAGINE what the NCI types will do if code is NOT
> eliminated very, very, very soon, like in 2004!

We aren't really worried about the outcome ... the administrations
of the world have already sent clear signals through their respective
WRC-03 preparations, as to how things will almost certainly go
at the WRC.

> Why, you'll
> have to have metal detectors there within minutes after the
> "wrong" decision got made!

Now who's being irrational??? What's this "metal detector"
crap supposed to imply? Get a grip, Val!

> And I'm sure, if code
> testing IS eliminated, our friends at NCI will disband and go
> back to ground, like the fine Hams they are! NOT, and you
> know it!]]

NCI's charter is the GLOBAL elimination of Morse test
requirements for all classes of amateur license. Thus,
there may still be work for us to accomplish through our
national chapters in other countries, even after
the US eliminates the last Morse testing from Part 97.
However, when the last Morse test is abandoned, I'm
certainly not going to waste my time on eliminating
test requirements that no longer exist.

> >But what will come next, since the REAL reasons for the

>
> I don't think that there will be much come next. Of those
> who are avowed anti-code-test folks, who do you think would
> want to see any reduction in the content of the written?

Certainly not me ... I've stated that on many occasions.
NCI is "No Code (test) International" ... not No Test (of
any kind) International ...

> Not me. I am doing what I can to see more material brought
> to the Question Pool Committee. I will let the others speak

> for themselves, but a "No Written International" will not
> find any acceptance in the Amateur community, IMHO.
>

> continuing efforts to get those tests reduced to the "non-
> hazing" safety and operating issues ALONE! We have a
> LONG way to go there, I think.]]

Certainly not from me ... I will oppose any effort to eliminate
or reduce the material related to technical competence
(understanding how/why radio works) as I view that as a
critical component of being a ham and meeting the basis
and purpose of amateur radio ...

Larry, exactly what do you say on HF CW that cannot be said on
HF phone? If the content of the QSOs are the same, why does the
mode matter as long as the message gets through? The 40m Novice
band is presently more like the 40m phone band, filled with
foreign commercial AM stations. However, since I got my IC-756pro,
I am finding lots of space between those interfering stations.

> looks like an "effort" to "save code testing") could well have
> been a FEAR of NCI rising as a true competing organization.

NCI has never aspired to be a "competing organization" to
the ARRL ... the ARRL is a general purpose organization that
tries to "be (almost) everything to everybody" ... NCI is a very
focused, essentially single-issue organization.

The ARRL didn't "cave in" on WT 98-143 ... they fought to
the end for 4 classes of license with A and E having a 12 wpm
Morse test. NCI simply won because our arguments were
clear, logical, and in line with good public policy, NOT because
the ARRL "gave up."

> Was a deal was even cut, exchanging a "stab in the back"

Since NCI has never aspired to replace the ARRL as a,
let alone THE, general purpose organization, I don't know
what "threat" you think that NCI poses(ed) to the ARRL.

Val, your entire line of thinking here, with all of these
backroom conspiracy theories, is false and so absurd
that it makes you look foolish to even suggest it. If you
had been involved long enough in ham radio policy and
politics, you'd know that, but as a "newbie" your mistake
is understandable/excusable.

3190. Code Test Fiasco: Upon Further Review!

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-31 13:55:07 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <uae48455h8k8d9@corp.supernews.com>
Source record: 39184

Hello, all!

The consensus among those who are apparently informed
is the the FCC decided, in about 1975, that code testing had
NO regulatrory purpose. Taking that at face value, well, it was
and is just plain WRONG. The amateur service still has a
component referring to "promoting international understanding"
and Morse Code is STILL valuable as a "language" that is
understood around the world. For this reason ALONE the testing
provision should be retained, at some level, within the ARS,
over and above its obvious historical and operational value.

Having had a couple of days to let Mr. Hare's comments sink
in, the cavalier atttitude shown toward Morse by him (not even
in the top ten of things that most hams are concerned about!)
was BIZARRE and shows once again (to me) that the true
motives here may never be known. I have not mentioned this
because I thought it was, er, REALLY sorry, but the ACTUAL
reason for the cave-in by ARRL on this issue (in spite of what
looks like an "effort" to "save code testing") could well have
been a FEAR of NCI rising as a true competing organization.
Was a deal was even cut, exchanging a "stab in the back"
ersatz effort to "defend code" for a "stand-down" by NCI? Oh,
wouldn't THAT be rich! But it WOULD explain what I think are
very odd inconistencies in this whole story, which saw ARRL,
in the final analysis, doing very little except grease the skids
for the demise of code, and then spread this story about
how unimportant it is, far and wide! Now, an ARRL/NCI "deal"
WOULD be funny, wouldn't it, and we'll see if the ink on that
"secret treaty" (with those Texans) even dries before it is
broken! Wow, how funny would THIS be!

That is, there seem to be a lot of people unhappy with the
ARRL, and nowhere is it written in stone that it be the ONLY
significant organization representing amateur operators.
Institutional survival IS job #1 with ANY organization and the
jettisoning of code might have been a very small price to
pay to put the NCI threat, the LONG RUN threat, to sleep,
hopefully for GOOD!

Val

>FEAR of NCI rising as a true competing organization.

You give NCI WAY to much Credit. NCI is nothing more than a Welfare CB support group. I have heard they even have a Tatoo of Bill and Hillary on Carls rear end. Bill is on 1 Cheek and Hillary on the other. Rumor has it that this will soon be there LOGO

If CW enhances international goodwill, then it is the *general*
duty of amateur radio operators to choose to learn it and use
it. The "Basis and purpose" is in the section titled "General
Provisions". There is no requirement for every member of the
ARS to implement every basis and purpose.

Morse code is technically not a language. It is a method
of coding alphabets which, by themselves, are not languages.
Any CW abbreviation/short form can be used with most other
digital modes.

You seem to have become infected with Dick's paranoia.
Much the same thing would probably have happened if NCI
had never existed. That is not to take anything away from
the NCI effort but, in the 21st century, there is simply
no valid *regulatory* purpose to be served by continuing the
Morse code requirement. The FCC knows that without NCI having
to tell them. The FCC is simply trying to drag the ARS, with
some members kicking and screaming, into the 21st century. All
that is happening is that the wheels of progress are in motion.

People have attempted to found competing organizations many times,
some of them funded and quite serious.
The only way to change the League is from the *inside.*
If you're serious, get involved. Run for League office.
Get a voice. Get some people with you. Make some
intelligent (not shrill) noise. That has a chance to work.
Carping and fragmenting into little cults like NCI
won't solve anything and creates its own problems.

Who are these "informed people"? Where do they get their information from? Please cite your sources if you are going to use them as the basis for your arguments.

> The amateur service still has a
> component referring to "promoting international understanding"
> and Morse Code is STILL valuable as a "language" that is

As CAM pointed out Morse isn't a language, it's a method for encoding characters. If I spoke French, the characters I keyed would form French words.

> For this reason ALONE the testing
> provision should be retained, at some level, within the ARS,
> over and above its obvious historical ....

Spark Gap transmitters have historical value. Should we also be tested on their operation?

> and operational value.

PSK31 has operational value, should we be required to complete a PSK31 QSO to get a license?

Morse is just another method of operation. In and of itself it is no more important than any of the other modes, whether they are phone, digital (packet, PSK31, etc) or whatever new modes may come around.

> Having had a couple of days to let Mr. Hare's comments sink

Why does it seem bizzare to you that morse testing isn't something a lot of hams seem to be concerned about? Certainly doesn't rank in my top ten list.

> I have not mentioned this
> because I thought it was, er, REALLY sorry, but the ACTUAL

"Secret treaty"?? Now you really are getting into conspiracy theories.

> That is, there seem to be a lot of people unhappy with the
> ARRL,

How many are "a lot"? Does this quantity represent a significant number of licensed amateur radio operators?

> and nowhere is it written in stone that it be the ONLY
> significant organization representing amateur operators.

Absolutely correct. However, I do not know of any competing organiztion that has the membership numbers (and hence power) of the ARRL. If, however, you think it time for a new organization, then by all means draw up a clear charter, organizational structure, etc. and open it to membership. If enough operators approve of your goals, you will have a powerful organiztion to replace the ARRL.

> Institutional survival IS job #1 with ANY organization

True, can't disagree with you here.

> and the
> jettisoning of code might have been a very small price to
> pay to put the NCI threat, the LONG RUN threat, to sleep,
> hopefully for GOOD!

Have you any evidence that the ARRL considers NCI a threat? NCI doesn't seek to compete with the ARRL as best as I can see. They are a one issue group that once it's goal is reached will likely cease to exist. The ARRL is quite different, and seeks to cover all aspects of amateur radio, not just code.

Please note Val, that I am not trying to flame or insult you. You have posted some interesting stuff in the past. In this case, however, your entire post seems based on several gratuitous assertions. Before we can

accept them we must have some proof or evidence that backs your allegations.

It appears to make them happy enough, though.

For your Basic license, we should use the rf safety guide below the
threshhold where a safety study would not be required.

BTW, what is a "neener?"

OK, it appears we're back on track.

My point wasn't that they were paid to learn Morse.

My point is that they were paid to learn Mose as part of their avocation, then became an amateur radio licensee and demanded that I learn Morse, pass multiple exams on Morse, then get on the air using Morse where I can see what God-like creatures they are, and worship at their Altar.

And if I don't I'm an idiot and I'm destroying amateur radio.

Same thing I asked Carl, to produce, as of yet NOTHING. He claims 50 some
percent of NCI Members are Code Tested, but of course he provides no Proof.

Of course. You're not *quite* that dense.

I never needed to do anything in ham radio that I couldn't
> do with an Advanced license.

I recall you swore you'd never get an Extra, too. So much for your
assertions.
Looks like it must have been important to you, after all.

One would think that in all those years
> of electronics, you could have managed a EE degree.

Nope. Never was located where I could attend engineering school, and ya
know, it was just not important enough to abandon a good career to move.
As you say, I never needed to do anything I couldn't do with my tech
school training and lots of practical learning from experience.

Poor fella...
> Had to put up with engineers as bosses all those many years. Talk
> about envy.
>

Never worked for an engineer in my life, though I worked with one for
years. As a matter of fact, he never *ever* mentioned that he held a
degree in electrical engineering, and I learned it only when I read his
obituary after he died. (He also held a ham radio license). Not all
engineers are blowhards like you.

And just how could he provide you with the proof of that statement, without
violating
the terms of their privacy policy which includes the following statement:

"YOUR INFORMATION WILL NOT BE USED FOR COMMERCIAL
PURPOSES OR DIVULGED OUTSIDE OF NO CODE INTERNATIONAL".

You can find that statement on their website, the URL is
http://www.nocode.org/forms/SignIn.html if you want to see it for yourself.

So quit asking for something he CAN'T provide you with!

N4IXT wrote:

>What evidence do you have to back up your
>gratuitous assertion?

Hm. "Gratuitious assertion"? WRONG, on both
counts, see below. However, as for my speculation,
well, I have a brain and USE it . . . and what I've been
given as "information" in this area does not add up, at
least to me. In the rest of the world, when this happens,
it usually mean's that there's something going on behind
the scenes, something that almost no one with a big
stake in the outcome wants made public. The "evidence"
(what there will ever be of it, see below) is out there for
all to see; it's what you make of it that counts. I see I've
pushed your buttons! What's the reason for that?

>"Secret treaty"?? Now you really are getting into
>conspiracy theories.

No, nothing like that at all. It's how the world works, a whole
LOT of the time. There's a telephone system in this country
that is good from coast to coast and unless you're the FBI,
or some such agency, you don't know WHO'S dialing whom,
do you? I don't think so.

>Have you any evidence that the ARRL considers NCI
>a threat?

Are you kidding? Wake UP!

>NCI doesn't seek to compete with the ARRL as best as
>I can see.

You may need better glasses, or you may not. But the
issue is far from settled, in my view.

>They are a one issue group that once it's goal is reached
>will likely cease to exist.

Well, we'll see about that, too, pretty soon. That is, yes, "NCI"
may go away BUT, what do you want to bet that something
else will follow in its wake.

>The ARRL is quite different, and seeks to cover all aspects
>of amateur radio, not just code.

Now there's a tautology if I ever saw one! That is, the ARRL was
able to send code to a watery grave exactly BECAUSE of what
you say! Mr. Hare admitted that. Truisms are "OK" but cut little
ice here, I think.

>Please note Val, that I am not trying to flame or insult you. You
>have posted some interesting stuff in the past. In this case, however,
>your entire post seems based on several gratuitous assertions.
>Before we can accept them we must have some proof or evidence
>that backs your allegations.

I am not ALLEGING anything, I am SUGGESTING something,
something that has generated multiple responses on EASTER
MORNING!! (I just got back from church myself!) And I hardly
am being "gratutitous," in my opinoin. [Gratioutious: Unnecessary
or unwarranted.] No, I think I am well within the bounds of common
sense to speculate in this way. As for "proof," now just where is
ANYONE going to get that who was not actually privy to any
negotiations that may have taken place, huh? And, tell me, just
WHY would any such person spill?

Of course there will be, how about" No Test International", and guess who will probably be the Leader?
Carl would be a great Leader for this. Why you ask, well lets look at his history on upgrading. For 20 years Carl was un able to up grade because that Nasty CW Test was just to much for him to do. But wait, what do we find out after the Welfare Testing came into effect. Seems Carl most have had a hard time with Written also, it appears it took him 6 Months or more to upgrade. WOW, its amazing, the Great leader of NCI took 6 Months to Memorize a bunch of Q&As.
Whats even funnier is that 12years old and younger, can Memorize enough to walkin at 1 setting, with no knowledge and walk out as an EXTRA. And Techno Whiz Carl needs at least 6 Months.

> all to see; it's what you make of it that counts.

First, let's define "Gratuitious assertion": a statement presented as fact
yet is found to be unverifiable. Any gratuitious assertion therefore can
just as easily be gratuitiously denied.

You began your message with:

"The consensus among those who are apparently informed
is the the FCC decided, in about 1975, that code testing had
NO regulatrory purpose."

This was not presented as speculation but as fact. From this basis the
remainder of your message proceeds. Since this was the beginning of your
thesis, I asked for verification of it's factuality. So far, you have
provided none.

> I see I've
> pushed your buttons! What's the reason for that?

You made several assertions. I was simply attempting to find out what those
assertions were based on.

> >Have you any evidence that the ARRL considers NCI
> >a threat?
>
> Are you kidding? Wake UP!

OK, telling me to "Wake UP" is not providing evidience. Do you have any
statements you can point to, made by ARRL officials, that would even suggest

that the ARRL considers NCI a threat?

> >NCI doesn't seek to compete with the ARRL as best as
> >I can see.
>
> You may need better glasses, or you may not. But the
> issue is far from settled, in my view.

Again, NCI seeks to work on ONE issue, if they are doing more (such as protecting spectrum, let's say, or education perhaps) I am unaware of it.

> >They are a one issue group that once it's goal is reached
> >will likely cease to exist.
>
> Well, we'll see about that, too, pretty soon. That is, yes, "NCI"
> may go away BUT, what do you want to bet that something
> else will follow in its wake.

And what would that group be, and what would it's goals be? And why would it need to wait for NCI to go away?

> >The ARRL is quite different, and seeks to cover all aspects
> >of amateur radio, not just code.
>
> Now there's a tautology if I ever saw one! That is, the ARRL was
> able to send code to a watery grave exactly BECAUSE of what
> you say! Mr. Hare admitted that. Truisms are "OK" but cut little
> ice here, I think.

Sure, I can conceed that. It is certainly easier for the ARRL to allow the code test requirement to vanish considering it's overall scope of interests and activities.

For that matter I'll go one step further. I can even see where it is in the best interest of the ARRL for the code to go away as a test requirement. No code requirement could mean more hams, and thus more members for itself, and therefore sustain it's existance. Note I have not said the ARRL *is* doing this, simply that I can see where it could be in their interest.

> I am not ALLEGING anything, I am SUGGESTING something,

If you are suggesting a possible scenerio, it is assumed you have something to base that suggested on. For example, a series of statements by the ARRL that are independantly innocent but when taken together would suggest the scenerio you propose. I merely asked from what you based your suggestion on.

> As for "proof," now just where is
> ANYONE going to get that who was not actually privy to any
> negotiations that may have taken place, huh?

When one presents a statement as fact (such as the opening line of your original post) they should be able to back it up with a link or news source that can be independantly verified.

Most speculation of course does not have any direct proof, but most speculation starts from some kernel of fact that one reads, some statement that begins the "hmmm..." process. Again, that initial fact should be able to be offerred to the group so that we may read it and see if we can also draw a similar conclusion.

Otherwise, you are simply offering wild guesses, which may be just as easily dismissed, similar to two kids going "is not... is too... is not... is too".

> And, tell me, just WHY would any such person spill?

Fifteen minutes of fame can be a powerful inducement.

Robert / N4IXT

3223. Re: No coders and the ARS

Source record: 39217

Carl, you made a very valid point. When I was first licensed (WN2CJV in 1962), novices had voice privileges in the 2 meter band. I suspect the ARRL was trying to get more activity up there. A gentleman had built (around 1964) a 1 tube transceiver for 440 MHz - problem was, he had no one to talk to - even if it had a lot more than its' 1/2 to 1 mile alleged range! Now, novices and coded techs can use 10 meters. I wonder why? International agreements prohibit amateur operation below 30 MHz without some CW. Exactly what that means, I'll leave to the more knowlegeable folks around here. My only concern is this 'holier than thou' attitude of some of the gang. Gosh, we had one guy really screaming over this on one of the 440 FM repeaters. He was all for code - soooo .... WB2KAO and I made him happy. 40 WPM F2 emission, anyone? (ok, so what do they call F2 today???). I'd like to see just a little more tolerance all the way around; however, it is kind of interesting to see an 'on-topic' post now and then!

73 from Rochester, NY
Jim AA2QA

ps - am looking forward to the hamfest at the end of May. The program shows that Ed, W1RFI, is going to be soldering together a J-pole for 2 meters whilst wearing a tie. That alone makes it worth going to! I can't wait to see if that is a regular tie, bow tie, or western style!

Dick,

If you knew where you might beg, borrow, or rent a clue, and
if you knew Bill Cross, you'd know that nobody "browbeats him
into capitulation." Bill is a long-time extra, who spends most
of his haming chasing DX and IOTAs on CW ... he's also a
sensible, dedicated public servant who's committed to doing
what's best for the long-term health and future of the ARS.
Your borderline defamation of someone like Bill should cause
you shame, but you're far too ignorant to realize that.

Besides, when Bill Sohl and I did NCI's ex parte presentation
on WT 98-143, there was a whole room full of people from well
above Bill's level in WTB in attendance ... THEY asked LOTS
of very good, insightful questions that showed that they understand
the ARS a lot better than most hams give them credit for.
(probably better than YOU do, Dick ... though we all know that for
you being able to beep real fast is all that really counts ...)

We gave them rational answers to those questions ... the PCTA
obviously didn't ... the result in the Report and Order tells the story
as to whose arguments were more convincing.

The fat lady has sung ... get on with your life, quit your incessant
bitching, and don't presume to insult people like Bill Cross who
are so far above you in intelligence and integrity that "head and
shoulders" doesn't even come close to describing it adequately.

Again, it was never the intent that every citizen should become a radio
amateur. There are exams so easy that almost any literate and conscious
person in the country can pass them.

In article <uae48455h8k8d9@corp.supernews.com>, "Valentine Germann"
<vgermann@socket.net> writes:

>The consensus among those who are apparently informed
>is the the FCC decided, in about 1975, that code testing had
>NO regulatrory purpose.

I'd say that's stretching things a bit, Val.

1975 is significant because in that year the FCC proposed a VHF/UHF-only ham
license
with no code test, as part of a complex restructuring proposal.

It would be more accurate to say that the FCC decided in 1975 that code testing
was not
an absolute necessity for all ham licenses.

The "no regulatory purpose" phrase is from the Report and Order (R&O) for
98-143, the restructuring
proposal that took effect in April of 2000.

In that quarter century, it is clear from FCC actions that their view of the
necessity of code testing changed
from

'not an absolute necessity for all ham licenses'

to

'serves no regulatory purpose for any ham license other than meeeting treaty
requirements'

Lot of difference there.

> Taking that at face value, well, it was
>and is just plain WRONG.

I agree. But the FCC doesn't, and they make the rules. The mere fact that FCC
does something
doesn't make it "right", of course, but it does make it legal.

>The amateur service still has a
>component referring to "promoting international understanding"
>and Morse Code is STILL valuable as a "language" that is
>understood around the world. For this reason ALONE the testing
>provision should be retained, at some level, within the ARS,
>over and above its obvious historical and operational value.

Sounds good to me - but the FCC doesn't buy it. Nor any other procodetest reason other than "gotta satisfy the treaty".
>
>Having had a couple of days to let Mr. Hare's comments sink
>in, the cavalier atttitude shown toward Morse by him (not even
>in the top ten of things that most hams are concerned about!)
>was BIZARRE and shows once again (to me) that the true
>motives here may never be known.

Ed's list, as I read it, says that code TESTING is not in the Top Ten. Just his opinion, anyway. But
note that FCC received comments on code testing from less than one half of one percent of US hams,
even though the comment period was longer than usual and comments could be filed online. Such a
small turnout indicates that, indeed, most interested individuals don't really care very much about
code testing, one way or another.

>I have not mentioned this
>because I thought it was, er, REALLY sorry, but the ACTUAL
>reason for the cave-in by ARRL on this issue (in spite of what
>looks like an "effort" to "save code testing") could well have
>been a FEAR of NCI rising as a true competing organization.

I don't think so. ARRL's position did not change significantly from the initial proposal. FCC simply
decided not to go along.

No-Code-International has a total historic membership of perhaps 3400 individuals, worldwide.
Membership numbers are sequential and started with #1001, and there are no dues and no
expiration date on membership.

>Was a deal was even cut, exchanging a "stab in the back"
>ersatz effort to "defend code" for a "stand-down" by NCI? Oh,
>wouldn't THAT be rich!

I'm not sure what you mean. Neither organization changed their position when it mattered.

> But it WOULD explain what I think are
>very odd inconistencies in this whole story, which saw ARRL,

> WOULD be funny, wouldn't it, and we'll see if the ink on that
>"secret treaty" (with those Texans) even dries before it is
>broken! Wow, how funny would THIS be!

Sounds like wild speculation to me, Val.

What I think has happened is this: FCC has made it abundantly clear that they want the code test
to just go away, for all sorts of reasons. They did not reach this position quickly or because of any
single group. Rather, it has developed slowly but steadily for 27+ years. And the USA is not the
only country going this way.

The ARRL leadership is thus faced with the choice of supporting a code test position that has no
real chance of success, OR, taking a neutral stance and focusing its resources on other issues.
The ARRL BoD chose the latter route a little over a year ago. Has there been massive outcry from
the membership? Not that I know of.

>That is, there seem to be a lot of people unhappy with the
>ARRL, and nowhere is it written in stone that it be the ONLY
>significant organization representing amateur operators.
>Institutional survival IS job #1 with ANY organization and the
>jettisoning of code might have been a very small price to
>pay to put the NCI threat, the LONG RUN threat, to sleep,
>hopefully for GOOD!
>
Those "unhappy with the ARRL" have a whole laundry list of reasons. Some are still mad about
"incentive licensing", even though it was the FCC's idea, not ARRL's. Many don't understand
what the ARRL actually does, or why a national organization is needed in the first place. Some
are mad about the code test issue - on both sides of the fence. Lots of other stuff. A real
challenge to balance all the diverse interests.

Will NCI up and disappear if/when code testing goes away? We'll just have to wait and see.

Prove it with REAL FACTS. You could claim they have 50,000 Members but you cant prove it.
And of course with no Expiration Date on Membership, you could have SKs in those numbers, and your still going to count them.

3236. Re: ILLEGAL SALE OF HAM RADIOS?

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-31 20:15:08 UTC
From: Mike Yetsko <joe@user.com>

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Almost like clockwork this same idea come up, again and again, where
some HAM laments that someone can get a radio without showing his
license. And invariably there are people who express surprise that it's
not illegal to do this! From the people who write nasty letters to Radio
Shack (or say they do) to the people who get in a huff about "truckers
using a 2M rig)".

I bought my Swan back in 1981 and it was my incentive to learn code.

I bought my Kenwood as my incentive to get off my behind and over to
the Dallas FCC office to upgrade.

I got my dual-bander in my car as a gift.

I bought my K2 as my incentive to get back on HF and upgrade to
use it.

I'd just like to ask some of these HAMs where they'd be if they had to
PROVE operating privileges before they could buy a piece of equipment.
Of if they ever got a piece of equipment as a gift. (Yeah, it's a hot topic
with me. I just put these kind of people into the automatic classification
of 'snob HAMs'. The kind that go to stores and try to 'show off' that they
have an HT on their belt, and when someone expresses an interest in it,
they say "it's not CB and not for you" and walk away. (I personally
witnessed an ASSHOLE HAM do that in a Radio Shack a few years
ago. So I interrupted, showed the kid the book from 5W to 1000W,
and told him there were assholes everywhere, even in HAM radio.
Yeah, I have to admit, I was hoping the guy would get really hot, but
he just fumed and stomped out of the store.)

Val...you offer not one rational justification as to
your conclusion because you totally ignore reality
in that not one ham is ever mandated to USE morse
code once licensed. Are YOU now suggesting that
all HF licensed hams have some mandated responsibility
to engage in CW contacts on an international basis?
As for your argument...it was raised by others in FCC
comments. The FCC's reaction was...sorry, it doesn't
fly.

> Having had a couple of days to let Mr. Hare's comments sink

Not until our charter goal is completed. Still to
be accomplished:

1. End of ITU Treaty Requirements for Morse testing (S25.5)
2. End of morse testing in each country (e.g. USA, GB, etc.)

I'd say that NCI has a clear purpose for several
more years at the minimum.

Cheers,
Bill K2UNK

And just what and how did NCI (or anyone else) "browbeat
poor old" Bill Cross or anyone else at the FCC? You (Dick) claiming
it to be so would seem to indicate you know something
you aren't telling us.

> Hard to blame him (Cross)
> considering your spewing on this NG over the years.

In what way has Carl, me or anyone from NCI spewed
anything at the FCC over the years. The reality of NCI's
direct meeting (ex parte) with the FCC was a most
cordial and professional exchange. NCI made it's presentation
(the handouts are public record) and the FCC staffers
listened, asked some questions, and thanked us for
our input. They (FCC) offered no insight into the
eventual outcome of the NPRM. Believe what you want,
but the comical fantasies being conjured up by Val,
Dick and a few others regarding the role that NCI
played vis-a-vis the ARRL and FCC is truly funny.

More to the contradictory postings of a few PCTA folks,
I find it so funny that in one breadth we have Dick saying
the FCC (Bill Cross) being influenced to the outcome
because of NCI browbeating yet others say NCI had
no impact on the outcome 'cause it was a done ddeal
at the FCC since as early as 1975.

Cheers,
Bill K2UNK

Bob, Just an FYI...
The information is available for anyone to read from FCC
archives. Jim, N2EY has specific cites he often posts.
The above comment by Val is one of the few that
has some actual supporting references.

Cheers,
Bill K2UNK

You can't even speculate with any specificity. You toss
out your allegations of complicity bewteen ARRL and FCC,
ARRL and NCI, FCC and NCI without ONE shred of proof,
nothing but your claim that something doesn't fit
right...yet you don't even say what that is.

> As for "proof," now just where is
> ANYONE going to get that who was not actually privy to any

> WHY would any such person spill?

Nice to know you haven't a clue. Just why should
anyone believe your assertion, allegation, suggestion?

Still ROTFLMAO!
Bill K2UNK

Carl, he's not a newbie. He's said that he's read this newsgroup since '98.
He's well aware of where NCI stands on the issues, and what its goals are.
He did not come here in the interest of learning anything about amateur
radio. He and his neighbor already have it all figured out.

Thus, he is merely trolling..

I can't wait to see what his call is, then run a search on his neighborhood
to figure out who this mythical neighbor is.

Please explain to me, one of the regulatory professionals who advocated that position then and now, why it is "wrong". A regulatory purpose is what the regulatory Administration says it is (see below).

> The amateur service still has a component referring to "promoting
> international understanding" and Morse Code is STILL valuable as a
> "language" that is understood around the world.

So is English, Russian, Spanisk, Chinese, and Arabic - the "five languages" of the United Nations.. Do you propose mandatory testing of knowledge of those as well?

>For this reason ALONE the testing provision should be retained, at
>some level, within the ARS, over and above its obvious historical
>and operational value.

You are confusing a "regulatory purpose" with "a good thing to have". The former is something that enables the Administration (the FCC in this case) to perform its finctions and carry out its obligations.

I fail to see how, in the absence of Congressional or ITU mandate, mandatory code testing or use falls into that actegory.

The Extra always was a gimme, which is why you have one. Unless you're
referring to 1-Charlie which is more important than everything else in
amateur radio combined.

That's a petitio principii diversion, Bruce, i.e. you are not
allowed to assume the proof and go on from there. Nobody has
proved that the amateur radio exams have been dumbed down since
the FCC has stated that Morse code has nothing to do with anything
except Morse code. I have taken four amateur radio exams over the
years and have found them to be appropriate for the privileges.
IMO, ham radio has NOT been dumbed-down. It is up to you, as
the one who is asserting that positive premise, to prove your
point. Since you haven't even come close to a proof over the
past two years, a bunch of us are wondering if you are just
continuing to blow smoke.

Welp, I heard the Louisianna Supreme Court was backlogged and needed someone
who could make snap judgements and not worry about facts. I was sure you
were the "person" for the job.

73, Brian

> assertions. Looks like it must have been important to you, after all.

If you recall, I asked the members of this newsgroup to offer a convincing argument for me to change my mind and upgrade to Extra. I forget who offered the argument but it went like this: What if, in the future, the FCC eliminates the Advanced class and busts all the Advanced back to General? That argument changed my mind. I know you never change your mind, Dick, especially when you are proven wrong, but some of us are rational folk who learn from our mistakes. But I still have not used any Extra privileges so you can sleep soundly at night.

Translation: Dick was too lazy to expend the effort to gain knowledge by getting a EE degree. That's appropriate for someone who thinks it's OK to rest on one's laurels. And he has the nerve to rag on Techs, Generals, and Advanced hams who are perfectly satisfied with their licenses.

Asked and answered already - when the code requirement is removed
for all amateur exams in all countries.

I've always pictured Dick's head and shoulders as being just
about the level of his buttocks. :-)

Thanks guys for the Fun Weekend you to TIT. I have to get ready to take of this week on Bussiness, and wont have time to play on the Newsgroups. But to keep you all motivated heres some things you can talk about.

1. Will Carl find a Surgeon who can remove the Tattos with out laughing?

2. Will Brian figure out his parents ID

3. And TiT I will be in the Dallas Area part of the week, maybe we can have a QSO on your favorite 2 Meter CB Repeater. The Question for the rest of you is will TIT and I have the QSO?

Have fun guys be back in a Week or Two, and again thanks for the fun, you guys are always good for a Laugh.

I'm sure from reading the Amateur's Code that there was never any
intent to establish a pecking order within the ARS.

> Is she coherent?

Nope, my point exactly. Everyone cannot become an amateur radio operator.

Of course, as one of the bullies, you are forced to defend yourself
thusly. One wonders why all the power mongering since it doesn't seem
to accomplish anything productive.
